Dogmersfield Park... Home of the new Amdahl Euro headquarters.

Amdahl buys stately home

by Keith Holder
LEADING US plug-compatible manufacturer Amdahl is moving to a stately home to pull its staff together in a new European headquarters in Britain.
It has acquired Dogmersfield Park, in Hampshire, which will initially provide 38,000 square feet of space to be used as its administrative and training centre, at a cost of £6 million.
The move is necessary, says a spokesman, because the company's level of European business is growing significantly, requiring a larger centre for operations.
The decision to buy an existing property was made so that the operation could be completed quickly, he adds.
The previous headquarters was nominally based in London, though because of its size, certain functions were devolved to other main offices in Europe.
Despite the move away from London, the company is confident that it has good access to Heathrow Airport and the UK motorway network.
Peter Williams, Amdahl's general manager (European operations), says: "Dogmersfield Park will additionally provide our staff with a more pleasant environment, and has the potential for expansion to 80,000 square feet."
The move will not affect the company's existing UK base in Hounslow, which will continue to provide customer and sales support, he adds.
The company plans to occupy the building around the beginning of July, though the move is not scheduled to be completed until the end of the year.
No plans have been finalised for additional staff recruitment, and it is hoped that most of the existing staff will transfer.
Barrie Mann, managing director of Sheffield (Investments), which negotiated the sale, says that the conversion is probably the first to be carried out according to the recommendations of a recent report on design of buildings for the high technology industry.

Apple fires vice-president Kvamme

by Dave Madden
APPLE is dropping Floyd Kvamme, its vice-president of marketing and the man brought in to set up its marketing division just 14 months ago.
Kvamme, who joined Apple in January 1983 from NatSemi's National Advanced Systems, is expected to leave the company tomorrow.
His responsibilities will be divided between the company's existing US vice-president, sales, and vice-president, distribution, and the vice-presidents for Europe, the Americas, and the Far East.
Kvamme is moving into the venture capital business. He plans to set up as coach, or troubleshooter, for young high technology companies.
He will be staying in California, but will not reveal which venture capital outfit he will be joining.
Meanwhile, disaffected investors have brought a class action suit against Apple and its senior executives.
The suit alleges that the company's officials knew that Lisa faced both technical and marketing problems, that the project would ruin Apple's financial performance during 1983, and made deliberately optimistic statements in order to safeguard Apple's share price.
Steve Jobs and John Sculley, chairman and president of Apple respectively, are both named in the action.
Apple says that it was still reviewing the case, but that its initial response is that it "is without merit."
No date has been set for a hearing.

KVAMME... Dropped.

Dealers lodge official complaints against ACT

by John Riley
IN the wake of the Office of Fair Trading's finding last week that Apple was attempting to maintain retail prices, two dealers have lodged similar complaints against Applied Computer Techniques (ACT).
One of the complainants, Victoria-based C/WP Computers, placed the original complaint against Apple. The other complainant, Windsor-based dealer KGB Micros, wants to lower the retail price of the Sirius and Apollo by up to 25%, but wants written assurances that ACT will not stop supplying the machines if they do.
C/WP Computers, an IBM-PC dealer, applied to become an ACT dealer last year, but was turned down this January. Robin Adda, co-director, believes that the reason was that ACT feared that C/WP would advertise its machines at a discount.
"People assumed that our disagreement with Apple was because we were a troublesome dealer, not because Apple was breaking the law," says Adda. "We applied to ACT to become dealers, and at the time it indicated it wouldn't allow dealers to discount products."
David (Sandy) Saunders, managing director of KGB Micros, says that he made a formal complaint to the Office of Fair Trading just before Christmas.
Saunders alleges that ACT attempted to maintain re-sale prices, although verbally and not in writing. "The problem is that ACT, unlike IBM, makes no effort to specify what a dealer can do," he says, adding that this has resulted in a large number of ACT dealers.
"ACT wants to protect smaller dealers to make sure that ignorant computer users get protection. But that doesn't make any difference to those dealers that won't supply support - they'll still take their profit," he says.
John Liffewich, ACT's marketing manager, comments: "As yet, we have not received any official notification from the Office of Fair Trading. ACT has never terminated a dealer agreement over pricing."
"Discounting is normally a catalyst that leads to poor end-user support, and our policy is to ensure that the user has the highest level of support."
He adds that ACT always responds to user complaints.
The Office of Fair Trading confirms that both KGB Micros and C/WP Computers have lodged complaints.
"ACT was a victim of the situation," says Liffewich.

Trilogy returns to drawing board

by Dave Madden
"GENE Amdahl's attempt to leapfrog IBM and the rest of the mainframe world with the Trilogy supercomputer based on revolutionary chip technology seems to have failed."
Trilogy has been forced to re-design the processor which was to form the basis of its machines, and go for a down-graded version of the technology to "reduce the technical risks" associated with the project.
The company is delaying the proposed introduction of the Supercomputer until the middle of 1986.
A spokesman for Trilogy concedes that the initial project has been "too ambitious in some respects", and explains that "we have had to standardise our design options."
In effect, the company has simplified the design process of its wafer scale integration semiconductors. Although the company says that this will make subsequent development stages easier, it will result in slower processor speeds, and "inferior performance than we originally envisaged."
As a consequence of the simplification, Trilogy has decided to drop the single CPU version of the IBM-compatible machine. It will now offer a dual processor as standard. The upgrade will be a four-processor version, an option that was not possible under the previous design.
The company says that the dual processor version of the system will operate at about three times the power of an IBM 3081K mainframe. The more ambitious single processor design had been promised at four times the power of an IBM 3083J machine.
In January, Trilogy put shipment dates to the fourth quarter of 1985, after the interconnection technology of its prototype semiconductors failed. Trilogy says that those problems have been resolved, but the company will not have new prototypes to test before the end of this month.
The company claims the delay is from being worried by the date its investors view the announcement "positively". A spokesman says: "Our technology licenses, such as DEC and Sperry, have been acted well to our decision. It makes their development stage that much easier."
Trilogy had been due to begin production in Ireland in the summer of 1985, but it will not move into its facility there until that time, and does not envisage going into production until a year later.

Retailers plead for piracy suit cash

by John Kavanagh
THE UK Computer Retailers Association is trying to drum up industry backing for a software piracy lawsuit which, it believes, could set a legal precedent for future cases.
Barrie Mann, managing director of Sheffield (Investments), which negotiated the sale, says that the conversion is probably the first to be carried out according to the recommendations of a recent report on design of buildings for the high technology industry.
The case is being brought against a public body by Kuma Computers, a small firm in Pangbourne, Berkshire. The Association has been collecting details of possible piracy lawsuits and says it has a "clear cut" case with this one.
It is now trying to raise between £8,000 and £10,000 from its members - an average of £250 each - and hopes to get trade associations and others together in April to ask them to contribute.
But the influential Computing Services Association (CSA) says the effort should be directed through the Federation Against Software Theft, set up just before Christmas with the support of leading names such as IBM, ICL, and the National Computing Centre. Services Association director-general Doug Eysenly will be away on holiday when the meeting is held.
"It's difficult to get people to volunteer money," Eysenly says. "The Retailers Association's proposal of £10,000 won't buy many days of legal advice."
Paul Rayner, chairman of the Association, says Kuma must be prepared to fight to the finish. It must be prepared to meet most of the costs.
"There's been a dozen cases but they've all been settled out of court," Rayner says. "We need a proper court case, hopefully going all the way to an appeal, to set firm precedent. At present, people are vague about copyright legislation."

ACT deal

■ From front page.
The worldwide marketing rights would include France and Germany, where Victor has its own subsidiaries. The future of these is uncertain. ACT is setting up its own French subsidiary, to get going by the beginning of April, and ACT managing director Roger Foster is confident of its success.
"There's no duty between Common Market countries, so all we have to do is load the waggon in Scotland and drive them over," he says.
ACT builds its own Apple II in Glenrothes in Scotland, and Foster is keen to add the Sirius to the machines manufactured there.

IBM clamps down on PC supplies

IBM has put the brakes on supplies of its Personal Computer and PC/XT microcomputers.
A letter sent to all UK dealers on Monday states that they may now order only 25 machines per month because of a shortage of key components.
This contrasts with a statement made by IBM two weeks ago when it reduced prices by up to 20% and said production at its Greenock facility had been successfully scaled up at the beginning of the year. Richard Holway, marketing director of Hoskyns, one of the UK's largest suppliers of the IBM-PC, says that the price cuts followed by the shortage will lead to a large backlog of orders.
He adds that his company could easily fill orders for over 100 machines per month at present.
Even IBM admits that it has handled the affair badly. A spokesman says: "It is very embarrassing, but we are not alone in facing a component shortage." On a more optimistic note, he adds: "We expect this to be a temporary problem and we are confident that we will meet our production targets for the year."

BT at Westminster

BRITISH TELECOM has won the £1 million contract to supply a 5,000-line telephone exchange for the Houses of Parliament. The exchange, a Merlin DX digital PBX made by Plessey, will be installed in three parts in three separate buildings, with its processors linked by two Mbit-per-second BT Magstream digital leased lines. It will switch data as well as voice telephone calls.

ICL collaborates

ICL today announces its collaboration with Rediffusion Robot Systems on the development of factory automation systems. It is understood Rediffusion will be responsible for the shopfloor level, controlling machines and robots, and ICL will be responsible for the level above that.

CDC negotiates

CONTROL Data (CDC) has become the fourth mainframe manufacturer to negotiate rights to the wafer-scale integration semiconductor technology of Gene Amdahl's Trilogy Systems. It is making an initial payment of \$2 million and will pay royalties on all products using the Trilogy technology. Trilogy's other partners are Sperry, Bull and Digital Equipment.

Tebbit tosses £180 million to technology

by Dave Madden
GOVERNMENT funding for new technology has been increased by some £180 million. In a Commons statement on the final day of the Budget debate, Trade and Industry Secretary Norman Tebbit outlined the new measures:
■ £120 million to continue the Microelectronics Industry Support Programme, now to be called MISF2, until 1990;
■ £12 million to carry the Software Products Scheme through mid-1985. It has used the £25 million already allocated to it;
■ £20 million for advanced manufacturing technology. An allocation of £35 million for the present Flexible Manufacturing System Scheme is close to being committed.
■ Information technology centres to be increased from 150 to 175;
■ Extension of the Design Advisory Service, with another £5 million for the Quality Assurance Advisory Scheme. Special provision for the clothing footwear, and textile industries to encourage the use of advanced technology at a cost of £20 million over four years.
The original funding for MISF, which was launched in 1978 to encourage the microelectronics manufacturing industry, is exhausted.

Information Technology Minister Kenneth Baker, who gave details of how the new money would be spent, said MISF will have supported 160 projects and stimulated investment of £270 million in 40 companies.
Baker said the new funding would develop production and use of microelectronics components, and underpin the Alvey and Esprit programmes.
More than half of MISF2 will finance industrial capacity to supply equipment used to make semiconductors.
Baker said the government is encouraged by the way the industry has responded to MISF. He claimed that the UK would produce integrated circuits worth £300 million in 1983, while our consumption of microelectronics has risen from 20% of the European whole in 1980, to 29% in 1983, and now exceeded that of Germany.
But, said Baker: "While I'm only too keen to boost, and boast of our progress, it must be put in perspective, there is not one UK semiconductor manufacturer among the world's top 30."
Baker said the new money is "catalytic", and he estimates that MISF2 will help inspire total investment of £600 million.
The software products scheme is to be re-focused with two priorities: it will support products that

seem to have major export potential, and secondly, it will encourage development of software productivity tools.
Baker was pressed on the apparent paradox that MISF funds had gone to the likes of GEC, and Ferranti, while the government was now refusing Innos further funds.
He described this as unjust: "Innos has received £100 million from the government in loans and equity funds. It is now in a position to raise money in the private sector and I'm very confident it will do so soon."
"Innos was welcome to apply for support under MISF2," he added.

Europe forces standardisation

by John Riley
TWELVE top European computer companies have bowed to European Commission pressure and agreed to standardise connections for their products - if the EEC and its national governments will buy them.
The dozen companies, which include eight of the 10 largest European computer firms, last week announced their agreement to implement Open Systems Interconnection (OSI) standards in their products, starting in 1985.
And the companies aim to set up a series of multi-vendor projects to demonstrate the "practical interworking of products implementing these standards". The group hopes for cash from the EEC to help set up these projects.
But the European Commission's current £7 million project for developing standards is currently on the shelf awaiting approval from the Council of Ministers. This is unlikely to be forthcoming for at least six months, as it was put on ice when the Council approved the much more ambitious European IT programme Esprit.
More realistically, the companies have called on the EEC to recommend that public buying of computer equipment specifies the agreed OSI standards.
The European Commission encouraged the 12 companies, all involved in the first round of the Esprit project, to set up a committee, and sent a prepared document to each company for agreement.
The companies are: ICL, Plessey GEC, Philips UK, Thomson, Bull and CGE of France, AEG, Nixdorf and Siemens of Germany, Olivetti and STET of Italy, and the Dutch Philips.
According to ICL, the companies plan to implement standards which will cover existing and forthcoming International Standards Organisation and CCITT standards, including transport protocols, electronic mail, document interchange, document structure and the processing of graphic information.
The agreement resembles an agreement made in January between the national telecommunications authorities to accelerate their moves towards common telecommunications standards. It is almost coincidental with the long-term policy of the European Computer Manufacturers Association (ECMA).
Nearly two years ago ECMA got 20 companies to agree to back Martnet standards and TSO transport layer protocol.
However, ECMA's technical officer for OSI standards, Luigi Lauri, says: "I hope it's nothing different to what we're doing."
And John Foote, head of the Department of Trade and Industry's Focus committee, which helps manufacturers to anticipate standards, would make no other comment than: "It is in line with what we've been trying to do with our Intercept Strategy."
The ostensible aim of the agreement is to give European users a greater freedom of choice, and prevent them from being locked in to any one supplier.
The one supplier that the dozen European companies and the European Commission wish users to be unlocked from is widely interpreted as being IBM.
An IBM spokesman says: "We welcome international harmonisation of standards which could lead to greater choice and lower costs for users as well as broader opportunities for all manufacturers."
But the Yankee Group recommends that Europe adopts IBM's SNA standards - see page 6.

BAKER... "Progress must be put in perspective."

"When we designed T4, DEC VT100 compatibility was only the starting point."

Intelligence boss denies rumours

by Claire Gooding
ASHLEY Ward, managing director of financial systems house Intelligence UK, has denied the rumours that the company is in trouble. The rumours started last week following the sudden departure of 12 employees - nearly a quarter of Intelligence's staff.

"We are actually growing at the rate of 120%," says Ward. "We have dropped the staff because we were simply too big. We misjudged the number of people we'd need to cope with the growth. There are a number of new things coming along and we need to be slim and fit to cope with them."

Intelligence has built its business on the Micromodeller financial forecasting package. It used the system to model its financial and growth pattern and axed the extra staff when it became clear that Intelligence could not afford to carry them.

The Daily Telegraph reported last week that Intelligence had

dismissed the 12 abruptly and sent them home by cab the same day.

"There were bound to be rumours of liquidation," says Ward. "In fact most of the rumours come from jealousy at our success. The truth is we are doing well. Even if we were in trouble we have major investors who wouldn't let their investment go."

The National Coal Board Pension Fund put £1.1 million into Intelligence last year. The company is quoted on the "over the counter" 163 Stock Exchange, and is currently valued at £4 million.

According to Ward, the dismissed staff were the less skilled and more junior people, largely inexperienced programmers and unqualified engineers. He says there is "a good atmosphere" among the remaining 39 staff at Intelligence.

Deputy managing director, Richard Harris, stresses that research and development remain top priority, and confirms that the

entire Intelligence product line is still fully supported.

Intelligence faced much user criticism last year for not supplying updated versions of Micromodeller, and the user group is still seeking clarification of Intelligence's intentions on support.

The user group, the Business Micro User's Association, has recently been expanded from pure Micromodeller interests to include users of other systems. Intelligence itself has faced fierce competition from a plethora of modelling products, including the updated US "original" of its own system sold by rival firm Dataflex, which was set up by ex-Intelligence staff.

"The competition doesn't bother us," says Harris. "We are moving out of their level anyway. It was a matter of generating enough profits to fund future development. Although we were exceeding revenue targets, we had too many people for the level of growth."

WARD... "We are actually growing at a rate of 120%."

Learn more about robot skills

by John Riley

THE Open Tech's 50th project which was launched last week is a course to encourage people to learn more about robots.

The four year programme was set up just over one year ago by the Manpower Services Commission (MSC) to provide wider access to technical training on a "drop in and learn" basis with an emphasis on informal training.

Its budget was recently increased from £28 million to £41 million.

The robot literacy project will be administered by the London office of the international Organisation for Rehabilitation through Training. Stuart Daziel, the acting head of the MSC's Open Tech Unit, says that this project will help the introduction of manufacturing systems using robots.

The Open Tech uses distance learning techniques, with each project operating from a range of centres. The Open Tech differs from the Open University in that it works from the bottom up rather than top down, and courses are established on an industry or regional basis.

20,000 East German schools to get micros

by John Kavanagh

THE East German government is to put microcomputers in 20,000 secondary schools over the next two years following the launch of the country's first two home computers at the Leipzig Fair last week.

East Germany's computer manufacturer, Robotron, and the microelectronics specialist, Mikroelektronik, both introduced eight-bit machines based on a Zilog Z80-type processor made by Mikroelektronik. The machine cost about £400 for a basic keyboard and processor unit.

The average monthly wage in East Germany is £250.

The government scheme was drawn up by the Education Ministry with Robotron and is backed by the head of the government, Erich Honecker.

It calls for the introduction of one machine at each of the country's 20,000 secondary schools, for use by 14- and 15-year-olds. A few trial machines will be delivered this year but bulk deliveries are

HONECKER... Micro for every secondary school policy.

expected to start next year. Every school is due to be equipped by the end of 1986. Extra machines are expected to be installed for other classes after that.

Robotron sales executive Klaus Lorenz says the machines will be used to introduce children to programming and as a general teaching aid in traditional subjects. He says Robotron will train the school teachers.

If the scheme gets off the ground East Germany will be one of the very few countries to have national school microcomputer programmes. Details: page 12

Reagan's tough stance stiffens East's resolve

by John Kavanagh

THE hardening US line on technology exports to East Europe has had the opposite effect to that intended. Far from hindering development in Communist countries, it has speeded it up.

That was the claim made by defiant Communist computing and electronics organisations at Leipzig Fair last week.

East Europe is still some way behind the West: the biggest disc drives have capacities of only 200 megabytes, communications lines are poor and the newest products include expensive home computers based on processors similar to the old Zilog Z80.

But the hard line adopted by President Reagan's government has forced Communist countries to become more self-sufficient.

"In many ways the new hard US measures have helped us by encouraging us to develop our own technology much faster," says

Gerhard Merkel, head of research and development at the East German computer manufacturer, Robotron.

"We now make our own components and peripherals and so on, and we could speed up development if necessary."

Rudiger Sobie, director of Robotron Export-Import, agrees. "The US has imposed a 30% import duty on goods from Socialist countries and government agencies are no longer allowed to buy Socialist countries' products," he says. "That was a harsh move, for we had sold typewriters to US government agencies for many years."

"These and other US moves hindered us, but recently they have reinforced our determination in our own developments."

The determination seems to have made it possible for East Europeans to become wary of "cowboys" looking to take advantage of their traditional technology

hunger.

"We used to import US floating point processor chips unofficially through Mexico but the quality was very poor because we were willing to take whatever we could get," says a representative from the Czech computing organisation Kovo. "The chips are now made as straight copies by the Soviet Union. We import them from there - and 90% are OK."

This comment is significant because Kovo people are generally scornful of Soviet technology. As recently as 1980 a Kovo man at the Leipzig Fair laughingly pointed out that a "new" Soviet DEC-compatible minicomputer had core memory. And in that year the Czech machines were using US memory chips - now the Czechs make their own 16K chips.

The hard US attitude was noticed by some of the dwindling number of Western firms exhibiting at Leipzig. Regulars like IBM,

NCR, DEC and Wang have long given up and only one or two big names persevere.

Hewlett-Packard was there with the HP80 microcomputer. "The US attitude has made things noticeably harder for us over the last year," says Franz Lorber, a manager in the company's Vienna office.

"The Series 80 is OK because it has an old processor. But we couldn't show the new range with the touch-sensitive screen."

Rank Xerox Eastern Europe manager Gina Niendorf says export rules allow the company to sell its word processors - but not spare parts.

"If a chip fails we cannot send a new one," she says. "We have to take the system back to put in the new chip."

She adds that business with Communist countries is getting worse: the company has cut its stand size by half.

European UNIX® Systems User Group

EUUG

Spring 1984 Conference and Exhibition

To be held at the Hotel Erica, Nijmegen, The Netherlands and at the Faculty of Science, University of Nijmegen, The Netherlands.

16th - 18th April 1984

The European UNIX Systems User Group (EUUG) is to hold its 1984 SPRING CONFERENCE in The Netherlands. The event will feature informative TECHNICAL SESSIONS covering current UNIX developments in graphics, text processing, networking, distributed UNIX systems, programming environments such as SMALLTALK and PROLOG, editing environments such as EMACS, and database management. Amongst the personalities in the UNIX field who have been invited to speak at the Conference are BRIAN KERNIGHAN (Bell Laboratories, USA); ERIC ALLMAN (Britton-Lee, USA); BRIAN REDMAN (Bell Telephone Laboratories, USA); and LARRY CRUME (AT&T, USA).

TUTORIAL SESSIONS will cover advanced editing, advanced shell programming, advanced text processing, the C programming language, UNIX networking, 4.2BSD UNIX, the UNIX market situation, and AT&T licensing. Running concurrently with the Conference will be an EXHIBITION at which most of the major UNIX vendors in Europe and the USA will be represented.

Further details and application details concerning this important UNIX event are available from:

The Secretariat, EUUG, Owles Hall, Buntingford, Hertfordshire SG9 9PL, England. Telephone: Royston (0763) 73039

Pundits want an SNA Euro standard

by John Riley

THE European Commission is ducking the real long term solution for a networking standard, say consultants from the Yankee Group. It should wake up to the demands of suppliers to use IBM's SNA networking protocols as the basis for a standard.

According to Al Dunn, the Yankee Group's European director, the question is not whether Europe should go for SNA - which most large companies already use anyway - but "how much of the standard they can persuade IBM to open up."

Dunn is optimistic that IBM would open up SNA if looked like becoming a de jure standard.

Dunn and his colleague Don Tombs have had extensive meetings throughout Europe recently with suppliers, PTIs and the European Commission.

Both Dunn and Tombs believe that the International Telegraph and Telephone Consultative Committee (CCITT) which meets to set up communications standards "won't get Levels 6 and 7 of the International Standards Organisation (ISO) model right". They see the committee standards going the

DUNN... Optimistic.

same way as telex standards where "the protocols were interpreted differently in each country."

"CCITT by the year 2000 will have less importance in terms of office automation standards, by which I mean administrative support systems, and not transaction processing, than IBM," says Tombs.

"European suppliers want to go for DIADCA and that is a difficult pill to swallow," he adds. DIADCA is the more complex set of protocols.

Dunn and Tombs argue that the national PTIs are split over the question, while suppliers want to use SNA as a standard.

Pirate solution is near

by John Kavanagh

LEADING UK computing firms and government agencies have agreed on the design of a device aimed at becoming a world standard solution to the software piracy problem.

The government's British Technology Group and National Physical Laboratory are now putting together a full prototype specification. These two organisations are part of a consortium including 10 companies led by ICL and some big software firms, which are backing the project to the tune of £5,000 each.

The consortium approved the outline design at its last meeting and will meet early in May to sign off the detailed specification.

"Companies will probably then be invited to bid for the manufacturing rights to the device. The consortium believes the device could be sold for around £30."

The device is a temper-proof box of electronics which deciphers

and runs programs sold in encrypted form on disc or tape. The box will run all or part of a program. It plugs into a standard RS232 port.

Dr Brian Wichmann, who is co-ordinating the work from the National Physical Laboratory, says the device could protect software on microcomputers or mainframes. Mainframes software could be protected by plugging the unit into terminals, he says.

Wichmann points out that estimates put the revenue lost through software piracy at between £20 million and £50 million a year in the UK alone.

The consortium knows of no smaller collaborative work anywhere in the world. Wichmann says the group is aiming to help the UK industry - but adds that the proposed standard solution may be accepted internationally, otherwise UK software export could be hit by the need to have the device to run the product.

ALLIN... "Designed for simplicity."

Terminal is aimed at new class of user

by Keith Holder

TELEVIDEO the world's largest independent terminals supplier, is launching a low-cost Personal Terminal next month which it hopes will open up a new class of user. The terminal is designed to give users an efficient distributed system for computer data, electronic mail and telex communications.

"This is not just another terminal, but a serious attempt to open up electronic communications to a new class of user," says Peter Allin, managing director of Televideo.

The potential market for the machine is about four times that for conventional terminals, Allin says.

BCS backs Alvey

by George Black

THE British Computer Society has set up a special group to support the Alvey Programme's man-machine interface initiative, which has run into problems.

The group, which held its first meeting recently, is the brainchild of Nigel Bevan, of the National Physical Laboratory, who will be its chairman. Meanwhile, the strategy document for the man-machine element of the Alvey Programme has gone back for a rewrite after participants failed to agree its contents.

According to Bevan, the source of the difficulty is that few of the people in the industry grasping the questions of user-friendliness

regard themselves as part of the man-machine community. The British Computer Society (BCS) group aims to stimulate concern about the problem through generating publicity, holding events and co-ordinating the various interested parties.

Alvey director Chris Barrow has already staged a series of three-day workshops, and the BCS team plans to complement these with meetings in May and June. Prime movers in the group will be Professor Brian Shackel of Loughborough University, a

establishment which is one of few higher education centres which tackles this area, and Ivan Brown of the Ergonomics Society.

We have the edge.

Just as we have the edge over our competitors - you can have the edge over yours. Because from now on Cullinet's unique integrated software system IDMS/R makes the full promise of computers come true. IDMS/R, with its automatic system facility (ASF), makes your IBM mainframe as easy to use as a personal computer. With ASF you can develop an application in seconds by simply defining a relational record. ASF then dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation. This makes ASF a major advance over 4th generation languages. However, you need outstanding performance to build a complex, high volume production application. Typically 5% of the data relationships (joins) in any applications are accessed 95% of the time. With IDMS/R you simply change these relationships to predefined joins and benefit from a dramatic boost in performance. We call it Relational Fastpath. This is what makes IDMS/R a unique relational DBMS, and a perfect system for your production applications. IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, a full integration with personal computers and a complete line of integrated financial and manufacturing applications. But then Cullinet has always had the edge. We introduced the 1st dictionary driven DBMS. And we've kept ahead with continuous research and investment producing sophisticated tools based on proven techniques. Call us and we'll prove it. At Cullinet we believe there's no such thing as second best.

Cullinet

Cullinet sales break million barrier

CULLINET Software's UK sales passed £1 million for the three months ending January 31, 1984, 139% up on the same period last year. UK managing director Vic Morris says that increased sales of integrated manufacturing and financial software packages were largely responsible for the growth. US sales were up from \$20.1 million to \$31.3 million for the same quarter, and profits jumped 40% to \$4.23 million.

Package spreads

PACKAGE PROGRAMS has spread its net to the Middle East with a new office in Bahrain. The company has been operating in the Middle East since 1978 and has over 40 packages installed in major organisations in Bahrain, Kuwait, Abu Dhabi, Qatar and Saudi Arabia. Prudence Jazayeri will head the Bahrain office, recruiting local staff, with senior support coming from the company's London office.

Micropro move

MICROPRO, the Californian developer of the successful Wordstar word processing package, is to try to break into the competitive financial spreadsheet market. The \$50 million turnover firm is launching a new product called Planstar which goes on sale at the end of this month, running under both CPM and PC-DOS.

Duquesne here

DUQUESNE Systems, Pennsylvania owner of IBM mainframe systems products such as QCM and SDSI, has set up a UK office in Croydon. The firm, which went public in January, counts ICL, Massey-Ferguson and National Westminster and Barclays banks among its users. It turned over nearly \$5 million in 1983.

Decus meeting

THE head of the government's information technology standards work, Keith Bartlett, will address Digital Equipment users at the annual conference of Decus next month. His appearance comes as the government is aiming to overhaul its own internal communications to bring them in line with international standards. The UK arm of Decus has 6,000 members.

Floyd wasn't fired

FLOYD Kymme resigned from his post as executive vice president for sales and marketing at Apple Computer, and was not fired as stated in last week's issue. He is moving to an as yet unspecified Californian venture capital outfit, and will not be directly replaced at Apple.

Storage launches optical system

by Keith Holder

US PERIPHERALS manufacturer Storage Technology has launched its large capacity optical disc storage system in Europe, the first of a family scheduled to appear over the next two years. It is ready to take orders now, for delivery in the fourth quarter.

The 7600 uses an interchangeable 14 inch disc, and is capable of storing four gigabytes (million bytes) of computer data, graphics, diagrams or other image data, like X-ray films.

Gene DeKoster, the company's vice president for optical products, says that this is equivalent to one million typed sheets of A4-sized paper, 40 reels of magnetic tape or the contents of 1½ IBM 3380 magnetic discs.

He says that the market for write-once disc systems of this size is enormous, and estimates that shipments this year will exceed 500 units, followed by 6,500 sales in 1985. If true, this would be worth \$70 and \$650 million respectively.

DeKoster estimates that the market for these systems will be in areas where the residual value of information increases with time. One system has already been installed in the US, at the Word Weather Centre in Colorado, which will use the system to record weather patterns.

This is acting as an alpha test site, though beta testing is due to start in April and customer shipments to Europe are scheduled for the beginning of the fourth quarter.

DeKoster says that he does not see the new optical media as competition for conventional magnetic discs, but sees it replacing paper, microfilm and other photographic media as a form of mass data storage.

The actual disc uses changes in refractive index, rather than laser etching to record data. This allows an inbuilt verification subsystem to check the data for accuracy and burn it out if it is incorrect.

The company quotes a bit error rate of one wrong bit in 10 discs. Prices for the 7440 optical disc will be around \$200, and the 7600 unit will cost \$140,000.

DeKoster says he expects the price to fall once the systems start to sell in quantity giving a cost per Mbyte below 30 US cents over the next two years.

Although the present model only takes one disc, DeKoster was quick to emphasise that this was the first of a family which will include multi-disc systems, using a jukebox style for storing the discs.

The system uses the company's existing 8880 controller, which is plug compatible with IBM processors, and is supported by MVS 1.3. A version which will run under MVS/XA will be launched in the summer.

The company is already negotiating a number of OEM deals with other computer manufacturers and estimates that around half of its sales will be to OEM customers next year.

He illustrates this by comparing the value of scientific experiments, like the Voyager deep space probe missions, hospital records or corporate performance data, which he says may prove to be valuable years after they are compiled.

The storage life for data on the optical disc is put at 10 years by the company, though there is no guarantee given. This compares with three to five years for magnetic media.

Although the present model only takes one disc, DeKoster was quick to emphasise that this was the first of a family which will include multi-disc systems, using a jukebox style for storing the discs.

POTTER... Says he will not abandon games market.

Psion is game for some business software

by Keith Holder

A £10 MILLION UK computer games company is making the switch to business software.

Psion has a contract to provide the bundled applications suite for the Sinclair QL microcomputer, and is planning to sell packages as separate items for other microcomputers.

Psion has already demonstrated an impressive growth rate, selling programs for Sinclair's machines, the ZX81 and Spectrum.

The company's success so far has been fuelled by sales of popular home computer games like "Flight Simulator", with about 500,000 sold to date.

Profits have risen in just three years to stand at £1.94 million on a turnover of around £10 million. Now the company is looking for a

DEC plans to spend nearly \$20m in Ayr

by Nuala Moran

DEC IS spending \$4 million on kicking out its factory in Ayr, Scotland, to make personal computers and micros. And it is likely that a further \$15 million will be spent over the next three to four years on setting up a VLSI testing and a facility for dicing and repackaging silicon wafers.

"We're just at a decision point in terms of the plant because it was set up to do final assembly, and testing and technology is making this function obsolete," says Dave Lawrence, manager of the plant. "This is why we're looking for new roles in Ayr."

A pilot line for assembling the micro PDP-11 is already working and Lawrence expects to start shipping next month. Between 200 and 800 machines per month will be produced when production is going at full strength. There are also plans to make the Rainbow and the Professional in Ayr.

The VLSI testing is being set up at the moment and Lawrence is in the middle of getting approval for setting up dicing and repackaging facilities.

"Digital has its own semiconductor manufacturing operation in Hudson, Massachusetts. We've got contacts with people who work

there and got approval to test semiconductors on behalf of Hudson. This has given us a foot in the door and we hope to move on to dicing and repackaging."

"At the moment we're waiting for approval for a design study to set up a dicing and repackaging operation and we hope to build something a year from now. The VLSI testing should be set up in the next four to five months."

VLSI testing is very capital intensive. Lawrence anticipates the \$15 million estimate to be exceeded by the time all the facilities are complete. "Scotland has many advantages in terms of grants and infrastructure," he says. "All the things that are going on as far as electronics is concerned are very helpful to us in putting our hands up to get this work."

"To get this work we must show that we can produce things more cheaply in Europe than the Far East. We're in a good position in this respect. The grants help with capital depreciation, the infrastructure means we have local supplies, and being in the EEC means there isn't a duty barrier."

"At the moment DEC has four plants in Europe with a fifth one going ahead at Valbonne in France."

Questions hang over new BT services

by Donald Kennett

KEY questions on new British Telecom services which are due to start this autumn remain unanswered.

Speaking at the Online Business Telecom conference in London last week, BT's chief engineer for national networks specialised services, Bill Medcraft, was unable to say how the provision of an 80Kbit-per-second digital PABX connection from September at £750 would affect the current £8,000 price of a 48Kbit-per-second leased connection to BT's Packet Switch Stream data network.

His colleague, head of strategy Arthur Orbell, was equally unable to give a clear position on how responsibility for faults on circuits that used facilities from both BT and Mercury would be handled.

Orbell is joint author with Mercury's circuit switching manager Steve Carter of a paper describing how closely the two organisations were co-operating on standards and interconnection arrangements.

Both stressed the key role of a proposed standard for signalling between PABXs — the DPNSS digital private network signalling system — but neither was able to confirm whether it would be implemented in BT PABXs such as the Monarch.

Medcraft fielded the question on pricing from his former boss Phil Kelly, who retired from BT last summer to become an independent consultant. Kelly said he needed to know because his clients were asking, but he admitted that he had been unable to get the question answered when at BT.

Medcraft said: "With the IDA (Integrated digital access) package, there is scope for improvement in the tariff as the customer sees it. These are questions that are under discussion, but tariffs are intended to be based on cost."

Orbell said that responsibility for a composite BT and Mercury

link would depend on the terms of individual contracts with customers. The most likely target for a complaint about a failed call would be the provider of the connection, he added.

This would put BT in the position of taking most of the complaints and then being able to blame the customer for introducing a foreign element into his network.

Joint-author Steve Carter was quick to react to this by saying that Mercury would take responsibility for any link in which it provided the trunk section, even if both ends were connected via BT-leased lines.

Asked about the implementation of DPNSS on Monarch, the BT speakers said that PABXs were now handled by a completely separate part of BT (BT Merlin).

Orbell said: "I have people working closely with the industry of PABX systems under development, but I don't expect the manufacturers to talk about them. I would just say that whoever is first to implement DPNSS will have a big advantage."

Medcraft gave details of the integrated services digital network (ISDN) that is expected to provide the infrastructure for the world explosion in information technology-based services. BT is to start pilot trials of the service in September, based on five System X exchanges in the London area.

Coverage will spread to Watford, Milton Keynes, Manchester and Liverpool by the first quarter of next year, and to 1,000 local exchanges in business centres all over the UK by the end of 1987. But early extensions can be made to wherever there is demand for its facilities.

Single line connections will initially operate at 80Kbps (80,000 bits per second), giving one 64Kbps digital speech or data channel, one 8Kbps data channel and one 8Kbps control channel.

Germans get £770m

by John Riley

THE West German government last week formally announced its £770 million five-year programme to boost collaboration within the German information technology industry and between private industry and research institutions.

The new feature of the DM 3 billion programme is that to qualify for a 50% grant from the government for IT projects, companies must collaborate. This is unlike earlier emphasis of the programme, which starts this month, is on applications for the market place rather than on fundamental long-term R & D.

"This is not just a case of spreading money around with a watering-can," says Günther Möller, director general of the European Business Machines Manufacturers' Association (Euromat). "It is linked to strict conditions to combine industry and research and it is a completely new philosophy for us."

Möller added that the German Ministry of Research and Development had brought in outside consultants, Arthur D. Little and SRI International, to work out why government subsidies given to IT in the past had failed.

subsidies to single firms was a mistake," he said, "and that philosophy has been avoided this time."

According to Möller, DM 530 million is to go to users introducing IT into industries. That would include robotics and production techniques — "mainly for medium-sized companies."

About DM 160 million is to go to CAD/CAM; DM 200 million to knowledge-based and expert systems; DM 160 million to new architectures; and DM 260 million to telecommunications; and DM 410 million to applications of optical technology.

The largest chunk of cash, DM 980 million, will go to microprocessor technology, comprising DM 180 million towards key components, DM 200 million for new electronic components and DM 600 million for sub-micro technology. A further DM 320 million is going towards micro-peripherals development.

While welcoming the move, Möller says that the cash is still not as much as he would like. "It is not tremendous compared with the Netherlands," he said.

"Nevertheless, the programme is very positive for the German computer industry, and we were consulted from the beginning."

KOWALSKI... Pioneer of Prolog at London's Imperial College.

SPL award goes to Kowalski

by Philip Hunter

PROFESSOR Bob Kowalski's work on the logic programming language Prolog at London's Imperial College has won him the first SPL-Insight Award, to acknowledge "outstanding contributions to fifth generation computing."

SPL-Insight is a subscription club led by SPL International of organisations which want to keep up with fifth generation developments.

The award will be presented at the club's annual dinner on May 15, when Kowalski will give a lecture entitled "Software engineering and knowledge-based systems."

"Insufficient attention has been given to the potential impact of knowledge-based systems in general systems development," says SPL-Insight director Bob Muller.

"Arguably, this is the very area where we could lead in new generation computer systems." Kowalski has pioneered development of Prolog, the logic programming language chosen by the Japanese as the root language for artificial intelligence.

HOW TO EXPAND YOUR DATA STORAGE WITHOUT EXTENDING YOUR ARCHITECT

Forecasting, someone once said, is very difficult particularly when it applies to the future.

However, one extremely safe prediction is that the voracious data storage appetite of the new generation of Central Processing Units will continue to grow. Probably at an exponential rate.

Soon you will have to find room for more high capacity data storage machines. But where? And how? You could move. But the disruption problems don't bear thinking about.

Your architect may be able to build extra floor area, but not everyone has that spare space available.

The simple solution is to install the NAS 7380. It's the best way of obtaining large capacity storage in a confined area. Each 7380 provides over 2.5 billion bytes for a footprint of only 1.02m².

The floor space it saves is considerable. But that's not all! The NAS 7380 is a very reliable high performance machine with dual porting facilities — providing a most efficient cost per megabyte.

And if all this is not enough, National Advanced Systems can deliver the NAS 7380 within two weeks.

National Advanced Systems
Have tomorrow today.

National Advanced Systems (UK), John Busch House, 277 London Road, Isleworth TW7 5AX. Telephone: 01-568 8855. Telex: 8955817/8 NAS UK

SEE WHAT'S NEW
at the
NEW ENGLAND COMPUTER SHOW
APRIL 2-3, 1984
at the AMERICAN EMBASSY

Following the recent success of USA DATACOM, the US International Marketing Center is pleased to invite you to attend the NEW ENGLAND COMPUTER SHOW. 13 American Companies will feature the most recent state-of-the-art developments in computer equipment, some are exhibiting in the UK for the first time.

Products on display will include:
Memory cards, bar code scanning equipment, management planning software, micro communications hardware, modular wiring systems, computer peripherals, and many others.

To receive a programme and an invitation, please contact Kathryn Miller at the US Embassy on (01) 629 4304.

BUDGET ANALYSIS

"A very good Budget for a lot of service companies — almost all the measures are favourable" — Eyeions

Lawson pleases and confuses

Dave Madden assesses how the Budget affects the computer industry

IS it the Budget for "enterprise", as Chancellor of Exchequer Nigel Lawson, had it, or "irrelevant and deflationary", as alleged by the shadow chancellor, Roy Hattersley?

As far as the computer industry is concerned, it has proved something of a curate's egg.

First, the surprise. A dismayed managing director of a Lancashire textile firm charged Lawson, in a post-mortem on Radio Four's *Today Programme*, with "caring nothing for traditional manufacturing industry", and having a prejudice in favour of "the new service industries".

Yet any mention of information technology was conspicuously absent from Lawson's remarks, and it should add about £3 million to the bottom line of our members."

But was it a Budget for information technology, from a Chancellor biased towards service industry?

The verdict from the various vested interests that make up the computer industry is mixed.

According to David Broad, chairman of the BMMG and the Comart Group: "The Budget is one of mixed fortunes for the micro-maker." Gareth Lewis, ICL's group finance director declares: "The budget is generally good for the company" and cannot be persuaded to find anything the matter with it.

Doug Eyeions of the Computer Services Association comments: "A very good Budget for a lot of service companies — almost all the measures are favourable, and it should add about £3 million to the bottom line of our members."

Neil Barton, an analyst with Manchester stockbroker Henry Cooke, Lumsden has been advising clients since the Budget that, overall, its effect is that there is less incentive to buy technology, but he adds "It's been very good for the securities industry — institutions and stockbrokers — their discretionary spending will increase and they are the major users of information. So the online information industry will benefit tremendously."

The measures which will have the most immediate and potentially far reaching impact on information technology are changes in business taxation and allowances. "The current rates of corporation tax are far too high, penalising profit and success, and blunting the cutting edge of enterprise", said Lawson.

Consequently, he has introduced a programme of progressive reductions. In the year just ending, on which tax would normally be payable in 1984/5 the rate will be cut from 52% to 50% and by 1986/7 the main rate of corporation tax will be 35%.

In effect these cuts aren't entirely good news for high technology companies. Robert Miller-Bakewell, of Edinburgh stockbroker Wood, Mackenzie points out that there is an enormous discrepancy in the historic tax charges of leading companies, and only those with high actual tax burdens will benefit. Phillips & Drew estimates that Cable & Wireless, Ferranti and Thorn-EMI will all suffer a 10% loss of actual tax earnings, while Plessey and GEC would both be some 12% to the good.

Amongst systems houses, James Dodd, of Fielding Newton-Smith says: "Some firms in the sector have been very heavily taxed, Systems Designers was paying 52% until last year, and naturally will benefit."

The price of the fall in corporation tax has been a restructuring of capital allowances. Lawson's contention is that "over virtually the whole of the postwar period there have been incentives for investment in plant and machinery... but there is little evidence that these incentives have strengthened the economy or improved the quality of investment."

His amendments are designed as a shift from indiscriminate subsidies for industrial investment to low-tax rates for businesses of all kinds, whether they invest in capital or not, to encourage positive investment rather than tax shelter.

But all that has stuck in the industry's throat, David Broad again: "The abolition of 100% first year allowances on capital investment and its reduction by stages to 25% per year... at a time when every financial incentive possible ought to be used to encourage investment in the new technologies is a bitter blow." Broad believes that it will particularly hit the fast growing computer manufacturing company. And Barton agrees in principle: "Withdrawal of these allowances obviously reduces the incentive for people to buy assets," but adds: "Whether there will in fact be an impact or not is debatable — there are so many other factors in play."

Paradoxically, the fact that tax reliefs still apply at 75% to March 31, 1985 could act as a catalyst. ICL's Lewis says: "As capital allowance cuts will be phased in, there will be an acceleration of investment decisions, and ICL expects an increase in sales."

Even Broad sees an opportunity: "There is at least one opportunity for investment incentive — buy British micro now and don't leave it until next March."

But the changes in capital allowances have had one conspicuous effect — the whole of the British leasing industry is thrown into chaos. There seems to be no doubt that the £3 billion industry will contract. The controversy is whether the specialist leasing companies, including the computer leasing outfit, will suffer as much as the banks and general equipment lessors.

By buying equipment themselves and leasing it out, banks have qualified for capital allowance to set against their thumping profits. Though they pass some of this on to the lessee, it has still boosted post-tax profitability by around 10%.

Ashley Mitchell, managing director of United Leasing, is confident that the changes will "drive the clearing banks of their competitive edge", and "break their stranglehold on the leasing industry".

LAWSON... IT remarks about.

ident that the changes will "drive the clearing banks of their competitive edge", and "break their stranglehold on the leasing industry". The effect of reduced capital allowances and reduced rate of corporation tax will rapidly diminish the benefits on banks' taxable profits.

Mitchell insists that United's business is radically different from that of the banks — supplying selective computer equipment and not merely arranging lease finance. He adds that with the introduction of the 100% allowance in the UK, computer users have preferred to purchase rather than to lease, and so now the leasing option becomes all that more attractive.

But the market remains to be convinced. United's main rival Atlantic Computer has been marked down some 40 pence since the Budget. Although Dodd agreed that banks may fall out of the business, with it contracting into specific traditional leasing areas, Barton said that all leasing companies were on thin ice; and he would not be surprised to see Atlantic diversify further.

The National Insurance Surcharge, what Lawson describes as "this tax on jobs," introduced by the Labour government in 1977, has been abolished. That has been welcomed uniformly. Broad points out that in effect it reduces payroll costs by 1% from October. Eyeions estimates that in the relatively manpower intensive service industry it would add 1/3 of 1% to profit margins. Dodd calculates that a company like Logica might save £100,000 per annum.

The Budget has proved satisfactory for small high-tech companies, too. Small business corporation tax is down from 38% to 30%. Eyeions was relieved to find the Business Expansion scheme continued.

As far as the BMMG is concerned, David Broad views change to the treatment of value added tax on imported goods as the most positive aspect of the Budget for British micro makers.

"Changes will break the banks' stranglehold on the leasing industry" — Mitchell

BCS/COMPUTER WEEKLY LECTURE

John Riley reports last week's Gordon Bell delivery to the BCS and below profiles Bell's new company, Encore

BELL... "Japanese threat makes good copy."

Encore sounds good for Bell

MARKET driven companies is the current catchword in the UK. But Gordon Bell, chief technical officer at Encore Corp, believes that technology should lead the way.

Encore, the company started in the US last July by heavyweights from the minicomputer sector, brings a new concept to the industry. It aims to found and foster companies to build significant new products, while at the same time stifling their technical creativity.

Encore intends to do that by giving them freedom to be product driven rather than market driven, while providing them with an external marketing organisation to take the burden of sales and distribution off their shoulders. This idealistic sounding venture is run by a group of hard nosed supremos each of whom played key roles in shaping the course of three successful minicomputer companies in the 1970s. They believe that venture capital companies have failed to help start-up companies develop their technical directions, and intend the aptly named Encore to do just that.

Encore is headed by Ken Fisher, who took Prime from a \$7 million company to a \$350 million company. Reporting to him are a team of vice presidents which includes Henry Burkhardt, one of Data General's three founders who had architected the Nova minicomputer; Gordon Bell, Digital Equipment Corporation's vice president for engineering; "Chuck" Casale, formerly Prime's director of corporate development who had earlier helped build Control Data's CDC 3600 computer; and several other top calibre people.

Currently occupying 5,000 square feet of office space in Framingham, Massachusetts, Encore was started with \$1 million capital put in by the founders.

Bell outlines the company's philosophy: "The normal venture capital way is not the way to succeed for technical companies. It works for some companies, but not for those founded on the basis of a technology or a product, because they bring in field-oriented and marketing people which causes growth conflict. These companies, as a result, rarely make it."

"Our goal is to have excellence in both output. Product companies should not have to be in the selling business. It's hard enough to make the products. Our product companies have engineers, manu-

Have the Japanese panicked the West?

THE Japanese fifth generation programme is just a creative dream vision which has helped Japanese researchers siphon off ideas from the West. And the West has been unduly panicked into believing a revolution is around the corner.

Those views were expressed by Gordon Bell last week at the second annual British Computer Society Jubilee lecture, sponsored by *Computer Weekly*. Bell, who until last July was Digital Equipment Corporation's vice president of engineering and is now a vice president of the novel new US company Encore.

Defining the fifth generation is "one of the most fabulous games around," Bell says.

"There is a lot of public relations involved. The concept of the Japanese threat makes good copy and is a way of getting money

drummed up for computer science." But he adds that by publishing a plan and capturing the West's imagination, Japan has also captured the West's ideas on that plan. "It is interesting to watch how it engaged us to get out and build something that could really understand natural language."

"There have been so many critics of the Japanese plan that the Japanese will have learnt from it. They probably have a really interesting plan now," he says. Bell also believes that the fifth generation idea has "detracted us further from engineering and manufacturing by getting us to believe in the magic of revolution."

He recognises that there will be spin-off for the Japanese — "by products from far-out goals" — and that they stand to learn a lot about knowledge engineering and

other artificial intelligence based to solve the problem of parallelism. But he firmly denies that the fifth generation is revolutionary.

The revolutionary view, he says, holds that there will be voice and natural language communications, deep expert systems and programs that learn, fast wide area networks, ultra and very large scale integration and parallelism and "avant garde organisational co-operation between research and industry."

"But it is not revolutionary because it needs models of history to build on," he argues. A major stumbling block will be telecommunications: "We need faster wide area networks," he explains.

"One of my greatest worries is that the evolution of telecoms for computing is abysmal. The rate was 300 baud in 1965 and it has

only risen to 1,200 baud in the 1980s. If you believe things, some day we'll have a 64 Kbits rate as standard, but I'm sceptical of getting good communications."

Bell is most disturbed not by the Japanese fifth generation, but by Japan's decision to access the world's software by ignoring the copyright law — that is most worrying," he says. He was referring proposed changes in Japanese law which could give it rights to Western software (see page 2).

Bell is also concerned about the growing gulf between engineering and science in the West. "Computer science is closely bonded with software engineering, and there are some links between artificial intelligence and knowledge engineering. But the links between knowledge engineering and software engineering are tenuous."

THE BLEASDALE CHALLENGE

Eddie Bleasdale, Managing Director of Bleasdale Computer Systems Ltd.

"I challenge you to show me a UNIX* computer that can match the Bleasdale** for price, performance and back-up support"

With so much attention being focused on UNIX these days, the air is getting thicker by the day with claims and counter-claims about the superiority of this system or that.

So in the interests of setting the record straight, let's establish a couple of facts.

One: in its class, no other UNIX system in the country can touch the Bleasdale for speed and processing power. Ring us and we'll give you the full details. The results may well surprise you. (And embarrass some of our competitors.)

Two: no other UNIX computer in the UK can boast better all-round support than the Bleasdale. As a British-based systems designer and manufacturer, we can customise and

maintain your machine, as well as upgrade it to take advantage of new developments as they occur. We have UNIX systems experts at the end of a phone to deal with queries on-the-spot. Just as importantly, as the longest-established UNIX* company in the UK, we've built up a

library of proven, state-of-the-art software packages for every application from word processing and database management to graphics and CAD/CAM.

With these few facts in mind, take a look around. We think you'll find the air rather clearer than before.

To find out more about the Bleasdale, call Peter Hollands on 01-828 6661 or 828 4062. Or return the coupon:

I would like to know more about the Bleasdale range of UNIX computers.

WHAT TO WEAR TO WORK IF YOU BUY THE WRONG DBMS INSTEAD OF OUR MODEL 204.

Picking the best, most productive DBMS for an OS, DOS or CMS environment requires the use of all your faculties. Because many DBMSs never live up to their promises. And sooner or later those deficiencies are bound to catch up with you. Leaving you looking for something to hide behind.

Tesdata Software doesn't have to put on an act to convince you. Our MODEL 204 DBMS is the only commercial DBMS ever designed from scratch for online systems. Every other DBMS was converted from batch. And that means new applications come up faster with MODEL 204. And your applications and databases are much easier to maintain.

What about performance? If you end up with a DBMS that can barely carry a few million records and a dozen or so users, you won't be able to mask the fact forever. Especially if someone finds out that MODEL 204 can handle up to 513,000,000,000 records and 9999 concurrent updates. Now the advantages of MODEL 204 are available for the DOS/VS/2 and native CMS environments. Without sacrificing either performance or productivity.

In the DOS world, MODEL 204 is the only DBMS with a direct teleprocessing interface. Which saves the

resources and productivity costs of a T P monitor.

Our native CMS implementation outperforms other DBMSs because it utilises its own I/O routines without modification to either VM or CMS.

Finally, one other thing that no other DBMS can say. It's the fastest growing system for IBM mainframes from an independent vendor.

Now faced with these facts wouldn't you look silly buying anything but MODEL 204 DBMS?

Will East Germans pay one-and-a-half times their monthly salary for a home computer? John Kavanagh reports

Iron Curtain countries unveil their first home computers

EAST Germans were introduced to home computers at the Leipzig Fair last week when their country's two main computer and electronics organisations launched eight-bit machines costing more than one-and-a-half times the average monthly salary.

The machines, from Robotron and Mikroelektronik, are based on the latter's U880 processor chip, which is compatible with Zilog's ancient Z80. Mikroelektronik claims that its home computer can address up to eight megabytes of memory directly. It has patented the addressing method and is tight lipped about it.

Robotron's Z9001 costs £400 for a 16K system with no software and excluding the television display. The average monthly wage in East Germany is around £250. Highly qualified people such as university medical school lecturers earn around £370.

"The Z9001 is not expensive and the price is acceptable," said sales executive Klaus Lorenz. "There will be no problems selling it."

He says Robotron will build anything between 100 and 1,000 in the first year, but after that sales will move quickly into thousands a year, boosted by the East German government's plan to put microcomputers in schools. Certainly there was huge interest from East Germans at the Leipzig exhibition.

The processor and keyboard are contained in one unit, which can be attached to a standard television set. It displays 24 lines of 40 characters to provide crude, videotape-style colour graphics.

The memory can go up to 64K. Cassette tape and floppy disc interfaces are available but not communications. There are plans for a printer for October, when the Z9001 will appear on sale in high street shops.

Little software is available. It includes an 8K Basic interpreter, supplied on cassette tape or as a plug-in module, plus an assembly language. There is also a package to teach users how to operate the machine and how to program in Basic.

Robotron expects to have 70 programs ready by October. It insists the operating system is not similar to Digital Research's CP/M, which became virtually the

standard Z80 microcomputer operating system in the early days. Lorenz said Robotron would not try to sell the machine in the West.

"We have a huge need for consumer goods and we will manufacture for that need," he said. "Besides, western markets are already full."

The Mikroelektronik HC900 home computer also plugs into a colour television. It costs around 10% more than Robotron's machine. It will be sold through RFT shops, which sell televisions, radios, tape recorders and so on.

The HC900 processor is in a box measuring 10 inches by 11 by three inches deep. The keyboard is connected to it by a five-metre cable. Memory starts at 32K and is built up in 64K chunks — each in a

"We have a huge need for consumer goods and we will manufacture that need"

similar box to the processor — to eight megabytes.

Development engineer Uwe Buckner said the eight-bit processor could address the eight megabytes in microseconds, without using peripherals.

A cassette player, light pen and joystick are the only peripherals available now. Plans include floppy discs, speech output and analogue-to-digital converters. The HC900 can already produce five octaves of music.

Again Basic, an assembly language and an operating system — Mikroelektronik's own — are available. Buckner said extended Basic and the Logo learning language would be provided later.

Both organisations see the home market as the main one in a country where consumer durables are in short supply. Mikroelektronik also introduced what it claimed was a world first. Its Quantity Processing Computer is a microcomputer which converts measurement units from one to another and does calculations on them.

For example, if a user wants to add three metres and four inches together the machine converts the

inches to produce the answer of 3.101 metres. Over 100 units, ranging from gallons to pennyweights, minutes and volts, are stored in the 8K memory.

With unaccustomed marketing hype for an East German, the machine's inventor, Alexander Spitzner, said: "The first breakthrough was the pocket calculator. The second was a calculator with mathematical functions. The third was the programmable calculator. And this is the fourth breakthrough."

He added: "We have examined 8,000 patents and found no similar device. We have patented the machine in the US, the UK and elsewhere — and we are looking for solid partners among western companies."

He said the main application was the extension or construction of scientific and technical calculators and desk-top computers and related products in measurement and control.

The computer is the size of an A4 pad. It has a full alphanumeric keyboard and a 16-character display. It is based on the U880 processor.

East Germany was not the only communist country to launch personal computers. Videotron from Hungary launched the SLK-80, also based on the U880, but this time with a "superior" of CP/M version 2.2.

Videotron, probably the most outward-looking of the east European computing organisations, hopes to sell the system in the West. It costs £3,000.

Videotron offers Hungarian-built peripherals with the SLK-80, including 3.25-inch floppy disc drives with capacities of 200,000 characters.

The system can support four drives. There are eight expansion

"We have examined 8,000 patents and found no similar device. We patented the machine in the US, the UK and elsewhere"

slots; serial, parallel and modem interfaces are available. Programming is in Basic and assembly language and Pascal is on the way.

The machine will be aimed at the office and industrial markets rather than the home.

Meanwhile the Czech organisation, Kovo, launched a minicomputer compatible with Digital Equipment's PDP-11/60, another western machine which is getting on its feet.

The CM1403 is made from processor components and 16K memory chips built in Czechoslovakia.

It can support 29-megabyte disc drives and five-megabyte cartridge disc units, all from Bulgaria.

Two Bulgarian tape units with densities of 800 bits per inch were also connected. Next year Kovo will introduce its own 12-megabyte cartridges.

"The chips are getting better — but they are not up to DEC's standard," said a Kovo representative.

He said the machine was 100% compatible with the PDP-11. It runs operating systems similar to DEC's RSX-11M and RT-11 and there are links for DEC's Decnet.

The Czechs are working on a machine which will be compatible with the 32-bit DEC Vax.

Elsewhere Robotron saw off the last of its paper tape-based office

systems with the launch of the K1715 office computer and accounting system.

It again features the U880 processor — this time with an operating system compatible with CP/M, giving users access to the 4,000-odd applications packages believed to be available for that system.

The K1715 also has 5.25-inch floppy discs with capacities of 120,000 characters, plus communications.

Robotron expects to export the machine to the West, where it has had some success with its earlier office systems.

Robotron's main emphasis was on turnkey systems based largely on its own DEC-compatible minicomputers.

On display were image processing and computer-aided design systems. They were aimed especially at the export markets, mainly communist partners and developing countries.

Lists of Leipzig Fair visitors, displayed publicly, included officials from Cuba, Latin America, Africa and the Middle East, including the Palestine Liberation Organisation.

Rudiger Sobe, director of Robotron Export-Import, said the organisation exported over 70% of its production, almost all to "socialist" countries. A recent contract with the Soviet Union, worth £45 million, involved over 100 big mainframes in the next year.

The Soviet Union is said to produce the biggest mainframe in the IBM-compatible Eastern European range.

As usual it had a small cardboard model of such a system displayed on its stand.

The Soviet Union dominates Leipzig with its own building.

Hungary's personal computer, the Videotron, may reach the West.

SOFTWARE FILE

Hopper backs the database answer

THE back-end database machine has a great future, according to computer pioneer Commodore Grace Hopper of the US Navy Reserve.

Hopper, author of the first Cobol compiler and now aged 78, gave a 1½-hour lecture at Thames Polytechnic last week at which she held her young audience spellbound.

Her theme focused on the growing need for large volumes of accurate data which was even outstripping the availability of computer power. She argued that the database machine could be the answer to many of the problems now confronting the industry.

"We need more power but we can't go on building machines the same way," she said. "We can build systems of computers, as you

don't need to run all your applications on the same machine."

Bell Labs had first got the idea of a separate database machine in 1972, but no-one had paid any attention, she said. In 1980, the first one had been demonstrated at Anaheim, but few had even noticed it. Two years ago, the US Navy had installed its first which had been very successful. The second would be installed this summer.

The concept was important for data security, she said. "We're doing very poorly at protection of data so far, and multiple databases may hold the answer."

She described how computer power had increased thousands of times since she helped to program the first large-scale com-

puter for the US Navy in 1944. Yet the demand for data was increasing at a faster rate for calculations like weather forecasting and monitoring of water supply.

Hopper argued that there was an equal need to re-assess the value of data presently being stored.

"We've spent 30 years fascinated by blinking lights and not considering the quality of our actual information. We have also totally failed to look at the possible cost of storing incorrect data."

She recalled being told by the US Navy that she was too old to join at 40 but had refused to be deterred.

She had this message for the young people of the British computing community: "Go ahead and do it! It's much easier to apologise than it is to get permission."

HOPPER... "We've spent 30 years fascinated by blinking lights."

Lex spreads its wings

by Claire Gooding
ACE Microsystems is venturing out of the DEC fold with its Lex word processing package. The product will be made available on a wide range of machines and operating systems, including the 68000-based Wicat under Unix, on the IBM-PC under PC-DOS, the Digital Equipment Rainbow, Perkin-Elmer's 32-bit machines, and all CP/M 280-based micros.

The package was developed for the DEC PDP-11 and it has sold well in the US, providing Ace with revenue of £120,000. The company, turning to OEM deals, has also signed with Perkin-Elmer for the word processor to be supplied on its hardware.

"We realise the market has changed," says marketing director John Irwin. "People are selling through distributors and everyone is looking towards the personal computer as the vehicle of the future."

"We see large companies buying the personal computer as the most significant market for Lex. We estimate that over half our income will come from large customers. Already, half our licences come from overseas."

Ace has emerged unscathed from the long court case with rivals Filetast Support Services over the ownership of its D language.

The rights to D now seem secure, which is a relief to founder Tom Barnard, since D is a vital ingredient in his word processor's flexibility.

"The fact that D is a portable language means that we can use it as a native code generator. It becomes comparatively easy to port to other machines," he explains.

The arrival of Lex under Unix brings new competition to the well-established British word processing packages such as Redwood's Unifix, based on the

BARNARD... "Native."

original Lex 11 package, and Precision Software's XED.

Lex has the advantage of already having a large installed base among DEC and micro users and it has been developed well beyond most word processors.

It includes sophisticated facilities such as an in-built calculator for figure work, and the ability to merge figures and text from database files.

ACT chief slams IBM and Lotus tactics

IBM and Lotus Development Corporation have come under fire for their software tactics.

At the Computer Trade Conference held at Wembley last week, both the industry leader and the best-selling micro package author were criticised by Ian Wallace, technical director of ACT, IBM's principal micro rival in the UK with its Sirius and Apricot machines.

He accused Lotus of "arrogance" in delivery of a package (1-2-3) to run on only one machine (the IBM Personal Computer).

"People should not have to go into a shop and be told that this application only runs under this operating system or on that hardware," he claims.

The industry and IBM in particular are not really giving what the user wants, he says. A move towards a standard environment is now essential.

"Personal computing in the USA is IBM-paranoid and this is stifling innovation," he claims.

It is crazy to have to buy a different word processor for each operating system. IBM is a closed system and people are locking themselves into it, he complains.

In an after-lunch speech, communications expert John McNulty of McNulty's Interchange predicted that parallel processing and optical computers would be the next two great advances.

"We have got to go for parallel processing in a massive way," he urged. Optical computing still seemed very far-fetched to most people in the trade, he said, but it was less distant than imagined.

user wants, he says. A move towards a standard environment is now essential.

MSA puts Q-Pac into Safe hands

by Claire Gooding

MSA has granted Safe Computing exclusive rights to sell the ICL version of its Q-Pac payroll and personnel package.

The move leaves MSA free to concentrate on its IBM market. It will hand over responsibility for ICL maintenance, sales and future releases to Safe.

The package, one of the front runners in its field, has been re-developed since MSA acquired it in 1979. It has about 140 users in the UK, about half of whom use ICL hardware, and has its own user group.

Safe intends to expand Q-Pac's target machines to include the entire ICL range and push ahead in implementing an online version of the system. Safe specialises in ICL software and is best known for its factory and production packages.

It was MSA that made the first approach with the aim of off-loading its ICL software onto an ICL expert.

"Our policy is that it is not wise to dilute resources," says MSA's UK managing director, Dan Schmidt. "To make the most of our R & D, we focus on IBM development. It's virtually impossible to keep abreast of all hardware versions; the only way to do that is to go to the experts."

"We move the IBM version forward and pass on the benefits to implementers on other hardware."

MSA has similar agreements for Q-Pac on Univac, Honeywell, and NCR hardware. Safe was chosen for the ICL contract partly because there was no conflict of interest in the applications it already sells, and partly because it was already a user of the product with in-house expertise.

Safe is thought to have committed a lot of time and money to the project and will pay MSA royalties for sales and maintenance charges to existing users.

Philips picks US database

PHILIPS Data Systems has announced that its standard database for the successful 3000 series is to be the US-written FMS-80. The database, written by David Rodman of DJR, is the subject of a three-way deal between Philips, Rodman, and DJR's distributor in the UK, Panoramic.

Philips is the first European manufacturer to have adopted FMS-80 on an OEM basis, although the system has been available in the UK for some years through several distributors. At one time, it was front runner in the micro database stakes, but it was overtaken by other contenders such as Ashton-Tate's dBase II (see story this page).

"The deal with Philips is the first step in a more aggressive marketing policy for DJR and Panoramic. Obviously the fact that FMS-80 runs on TurboDos, the multi-user system already used by Philips, has helped a lot, but it was far from being the only factor," said David Warren, managing director of Panoramic Computing.

According to Warren, the main reason why his product came to the test of Philips' shortlist was its flexibility, its ability to generate custom-built reports, and the fact that it can be used as an end-user tool, as well as a development language for experienced programmers.

The system recently won a competition sponsored by Computer Weekly and Computer Automation

WARREN... "David Rodman is one of the few real Unix experts around."

to code a flowchart for updating a record in a multi-user system.

FMS-80 started with advantage that David Rodman originally designed and wrote the system to run with TurboDos, written by Mike Bush.

According to Warren, an implementation of FMS-80 for the multi-user Unix operating system is on the cards, and it will not be long before he writes a version of the Unix language C.

"David Rodman is one of the few real Unix experts around," says Warren. "He was giving lessons in C back in the 1980s, and knows Unix very well. He should have

the version ready by the end of this year."

Philips is to make the database a "Category 1" product, which means that it gets the Philips seal of approval after extensive in-house tests. Panoramic will be handling the support itself.

Other major users include the Midland Bank, Currys, Hambro's, and the colleges of Oxford University, which are buying the system for their administration.

The product sells for £395 for a single user licence and £495 for the IBM-PC implementation, with £595 charged for a multi-user licence.

Ashton-Tate moves to multi-users

by John Kavanagh
MICROCOMPUTER database leader Ashton-Tate has taken its dBase II system into the multi-user market with a version to run on Ethernet local networks.

The US firm, which has over 150,000 dBase II users worldwide, is developing versions for other networks and multi-user operating systems.

These moves come as the company faces strong competition from more recent entrants in the micro database market.

After the Ethernet version will come models to run with the multi-user MP/M-86 and Turbo-

dos operating systems. Further away are versions for other local area networks, including Omninet.

But Ashton-Tate denies these developments are a response to competition. "It's a natural progression," says UK customer service manager Joan Chesney. "It's something the users want."

She says there is "massive interest" in the new version. There are over 10,000 dBase II users in the UK.

The UK price is around £700 for the first four terminals and £300 for each extra group of four. The single-user dBase II costs £437.50.

The Ethernet version runs with Microsoft's MS-DOS operating system. It includes record locking, file locking, queuing and passwords for private, shared and public files.

Private files can be accessed only through a particular terminal and password. Any terminal can access a public file but not write to it. Shared files can be read and written to by any terminal with the right password.

Maximum database size is 65,535 records, the same as on the single-user version. The original dBase II was introduced in 1981. It runs under CP/M and MS-DOS.

Tools are re-launched

INFORMATION Technology Ltd, the Hemel Hempstead fault-tolerant supermini maker, is to introduce new software tools to help boost programmer output.

It has completely re-written its transaction application driver (TAD), which was originally developed in the mid 1970s and will re-launch it in July as the transaction management system (TMS).

The software was demonstrated to the company's southern region user group last week for the first time.

TMS is aimed to let programmers design their own screens more quickly and easily. Its predecessor derives from the days when interactive systems were a novelty, and the 300 series of Information Technology have been pressing for more modern and more user-friendly facilities.

The re-write is said to take full advantage of the 32-bit architecture.

More than half of these users are systems houses writing applications to run on the CTL Momentum 9000 range of machines. The others are mainly data processing departments of customers in the manufacturing, financial and health sectors.

Persuading these to adopt TMS will be crucial, says Information Technology's market development manager, Roger Fulham.

As most of the users will already have spent some £500,000 on buying and enhancing their systems, the extra £15,000 to £35,000 for the new tool may seem a logical step rather than an extravagance, he argues.

Two weeks ago, the group announced a structural shake-up, with subsidiary GTL being merged into Information Technology Ltd. Last year, the group had links with several software houses.

Software File is compiled by George

Torch takes a shine to Unix

TORCH Computers has invaded the Unix market.

The company has signed an agreement with Pipelink, a member of the Tamsys group, to provide applications to run on Torch machines under Unix.

Torch recently launched its own Unix-based machine, the 725, and the Unicom BBC micro hard disc pack, both tuned to Unix System III.

Pipelink will tailor a range of Unix applications to run on Torch machines, including Redwood's word processing package Unifix, accounting and payroll systems from Computer House, and the Complete Manager from Alternative Business Systems.

SPITZNER... "And this is the fourth breakthrough."

PROFILE

Computing is still fun for the kid who made it to the top

DAVID RODMAN was 10 when he started programming. Nowadays that is not uncommon, but in the early 1960s Rodman was something of a prodigy.

He wasn't just playing games, either. His early computer experience was at the Artificial Intelligence Laboratory at the Massachusetts Institute of Technology (MIT). Rodman's father worked at MIT and the son used to visit him after school.

He soon got bored with his father's office and wandered down the hall into the Artificial Intelligence Labs. Soon the staff were letting him key-in programs to the PDP-1 which their research centred on.

"They called me the Kid," Rodman says. "I became their mascot. Computers for me were something of an addiction."

He describes himself as a troubled child, with not a particularly happy home life. But in the MIT laboratory he was accepted. And he found that playing with computers was fun.

Rodman, who is now chairman and managing director of his own company, DJR Associates, still thinks computing is fun. When he thinks of his early introduction to computers and the delight it brought him, he says he finds it hilarious that you can now get a university degree in computer science - "a degree for watching television", he says. "I was doing it for fun."

He doesn't have a degree to his name. After seven years at MIT as

a mascot and hanger-on, he went out to the wide world - and wandered around. He did a stint as a cab driver in New York City, sold cameras, tried his luck as a musician, and found some work in off-Broadway theatre.

Finally he drifted back to Cambridge, Mass, where he got back into computing with a company that developed and disseminated training programs for drug abuse schemes. The first problem he attacked there was a mailing list system, working with an outside company to develop a computer-based solution which, he says, taught him that the customer does what he wants.

You can now get a degree for watching television. I was doing it for fun

not know what he wants the way a programmer does.

That in turn, he says, instilled in him the desire to find a common language that could be understood by business and programming people. Harking back to his days at the MIT Artificial Intelligence Laboratory, he saw a way towards a solution.

In the early 1970s Rodman started working for the Central Intelligence Agency through a consulting group, JRB Associates in Washington, DC.

He was director of data processing for the Human Factors/Bio-

RODMAN... "I am starting to peek my head out into the real world."

bernetics Laboratory in Rosslyn, Virginia. The work there was funded by the Department of Defense Advanced Research Projects Agency (ARPA), which at the time was behind nearly all artificial intelligence work in the US.

But Rodman found the strain of not talking to people about his work too much to handle. In 1974 he started his own company, DJR Associates, which was set up to provide software and consultation to clients in the Washington area. He eventually got a DEC minicomputer in his one-bedroom apartment, and he rented time to clients.

Looking at his clients' problems, he found the same thing was being done over and over again - adding, changing, deleting, and printing of records. Why not, he asked himself, write a program to do that - but which separates the format of information from the program?

So was born FMS 80, which Rodman says took the leap of separating process from data. The initial product had no re-

port generator, or language, but people were crazy about it, Rodman says.

FMS 80 developed into 50 or so programs which were parameter driven. Users no longer had to write programs, but could tell programs how a job was to be done. The result, says Rodman, is to bring computing power into the hands of reasonably intelligent people who don't want to know how computers work. "For me," he says, "it was almost a crusade".

FMS 80 sold well in the US, and for a while was one of the top selling database systems for microcomputers. But it is off the charts at the moment, pushed into the also-rans by systems like Ashton Tate's dBase II.

Technically, Rodman believes FMS 80 is one of the best systems. But he realises now that technical excellence doesn't necessarily win the day. "If I had gone to college, I might have known this," he jokes.

He admits to knowing little about marketing, and says only recently has he become a good salesman.

"I am starting to peek my head into the real world. I have been reluctant to succeed," Now, he says, the product is leading him. In the UK he has one convert, David Warren, of Panoramic Computing, a small start-up software company in Wiltshire. Panoramic distributes FMS 80s here.

Rodman says Warren has been instrumental in ensuring that Rodman has pushed FMS 80 forward. Last week Phillips Data Systems of the UK signed a deal with Panoramic to take FMS 80 on as a licensed product for its 3500 micro.

Rodman is now in the process of securing funding for his company in the US, ready for a big marketing push.

Which hope is to sell software which "appeals to people's commonsense", and which will give microcomputers a better name. His ultimate dream, he says is "one computer and one program".

He says he's on his way towards "a totally intelligent system". If he achieves that aim, they might call him the Kid again.

DOWNTIME

Disinformed in Hounslow

A CASUAL visitor to Wang's Hounslow, West London, office, en route to Data General's building in the same neighbourhood, had the bright but unfortunate idea of asking the Wang security man the way.

"Ah, yes," said the security man at the desk. "Data General, eh? What you want is London Road, Isleworth, dearie." And he very kindly routed the caller through the rush hour traffic, three miles the other side of Hounslow.

After a fruitless trip, she discovered Data General about an hour later, lurking just across the road from the aforementioned competitor.

No doubt the Wang man was referring to the Isleworth engineering and maintenance department and meant well. Or perhaps he was just extremely loyal. A real Wanger.

The vices of marketing

JUST who does John Clemens think he is? We thought he was NAS marketing manager in the UK. But no. Somebody else claimed him to be vice president, European operations, so we thought we'd better ask NAS.

"Marketing manager Northern Europe" was one reply. "Vice president Northern Europe," another. "Regional vice president," yet another. So we phoned his PA.

"He's actually all of them," she replied, "except marketing manager UK, that was his old job."

Atlas sales are safe

RUMOURS were flying like IBM lawsuits last week following the acquisition of 49.6% of Amdahl by Fujitsu.

The word from the plug compatible lot was that ICL would be dropped as UK distributor by the Japanese manufacturer.

Amdahl and Fujitsu both denied that any such move would take place, but one was suggested that even if Fujitsu were to pull the plug on ICL as a plug compatible supplier, it would hardly affect the sales figures of its Atlas.

Amdahl goes to the beach

AMDAHL may have been a bit surprised when Fujitsu bought almost half of it but it can't say it wasn't warned. Only a few months ago a little gathering of plug compatibles was addressed by semiconductor man General Gevia, who did his good news-bad news skit for the troops. For the good he said: "Yes, the Japanese are going to invade and take on IBM. The bad news is that we must have a beachhead. And gentlemen - we are the beachhead."

Chad 10 YEARS AGO FROM COMPUTER WEEKLY OF MARCH 21, 1974: Perle Elmer made a bid for US minicomputer maker Intersil... Viakras Engineering gave a £1 million order to ICL.

Doug Woodward is managing director of the Span Group, whose subsidiary, Span Computer Contracts, has contracts involving over 100 personnel.

ComputerWeekly

Are we all being conned?

ARE we all being conned with dreams of a fifth generation computer that talks and talks and listens to our conversation? Yes, says Gordon Bell, who calls the Japanese fifth generation a massive public relations programme.

Bell, once head of engineering at Digital Equipment Corp and a highly acclaimed computer architect, last week gave the second annual British Computer Society Jubilee lecture, which is sponsored by *Computer Weekly*. In a far-reaching presentation, he challenged much of the conventional wisdom about where computer technology is going. And in so doing he put some of the wilder claims about the fifth generation into some perspective.

Even while calling the Japanese effort "one of the most fabulous games around", Bell did not belittl the potential effect of what they have started. It is also a creative vision, he said, which has caught our imagination.

Bell also has no doubts that the Japanese will reap enormous benefits. They will learn how to do research, they will learn a great deal about knowledge engineering and other artificial intelligence techniques, and many important by-products will come from the far-out goals they have set themselves.

Leaders of the Alvey Programme, the UK's own fifth generation project, might feel a moment of anxiety after hearing Bell's words. Have they been led down the garden path?

No - at least as long as they don't believe in the magic of revolution.

The next generation, Bell predicts, will be more of what we have. And the way forward, he believes, simply requires a lot of plain work. That is not to say that future developments will be boring. There will, Bell believes, be at least another 20 years of fine exponential growth ahead. But we must be cautious about what we throw our money at. And we must not forget that while ours is essentially a service-based industry, those services are based on excellence in engineering and manufacturing.

Tebbit makes amends

NORMAN Tebbit's announcement of financial support for information technology during the last day of the budget debate makes amends for Nigel Lawson ignoring the industry during the Budget proper.

And the announcement itself represents something of an about-turn. The previous Chancellor cut the Microelectronics Industry Support Programme from £70 million to £35 million. Now not only has it been extended to the end of the decade, but the government has found another £120 million for it.

The government says that it has been tempted into this initiative because it considers that MISP, as well as the £85 million Microelectronics Application Project, have proved sound investments. It believes that microelectronics are used far more readily in UK industry than would otherwise have been the case.

Moreover, MISP gives the government some support for its conviction that government money should be treated as a stimulus and not as a substitute for private investment. Its view is that MISP has encouraged the semiconductor industry to help itself, and has inspired investment on a ratio of 1:3.

So MISP has proved a politically sound programme, and has been suitably rewarded. But on a wider front the government may have realised that semiconductor manufacture is a critical and strategic element of Britain's information technology efforts.

It may be no coincidence that the government has persuaded itself to find money for microelectronics at a time when it is increasingly concerned about the conspicuous dependence of the UK computer industry on foreign technology.

This has been heightened by the continuing controversy over US export controls. Perhaps a more satisfactory long term solution for the UK will have less to do with winning arguments over the application of US law here, and more with encouraging the self-sufficiency of our suppliers.

1984 and all that...

THIS week's example of the strange things people say about computers was sent in by Chris Baker, of Coulsdon, Surrey, who wins £5.

But the computer wins in the end. Your name has been programmed into it, and nothing, but nothing, will erase it. *County Border News, Tapridge.*

LETTERS

We need new economics to match new technology

YOU reacted very strongly to the Apex survey, yet it seems a better basis than Delphic questionnaires that lead to more forecasts.

That new technology will lead to net job losses is no surprise. Automation usually has that effect once the equipment is fitted and working. What is different about office automation is that it concerns service industries, not just manufacturing industries.

That different results are wished for does not mean that a new survey will give them.

It is an unfortunate practice that so many figures are given in relative, not absolute, terms: 50 jobs lost to one created, "growth" as the difference of the GDP of two years, percentage pay increases. All this conceals the actual size of problems, and accuracy tends to be very low (and not stated) as small differences between large numbers tend to accentuate fluctuations rather than show trends.

The two, or more, tier society is well known, and getting worse; with many wages and benefits reduced in the name of competitiveness, while salaries are raised. The repeated call for more productivity implies fewer staff.

What is more important is to consider the work that needs to be done to make society pleasant for all, not just a few. For a few decades there is more than enough work needed, compared with the number of people available to do it; but most of this work is not for making new products (creating wealth).

House repair and improvement, caring and education are all labour intensive, and being neglected. It seems that this work is being ignored because present economics cannot provide for it to be done as jobs (work for pay). So new economics are wanted to go with the new technology that has taken us into the post industrial era (few jobs in industry).

Apex's report was a report. What is needed is a policy to suit the facts, and this is a responsibility of society as a whole, not just one union, as unions are organised by trade, not in terms of whole local communities.

Meaningful statistics

AT the risk of continuing an electronic mail argument already running in the US through *BMS* magazine, can *Computer Weekly*, March 20, please clarify whether the GB QuikComm system had 20,000 users as per his letter, or 40,000 subscribers as per *BMS*, January 19?

In reality, are these 20,000 or 40,000 actual users of QuikComm or just subscribers to the Gelsco timesharing service to whom the QuikComm facility is available?

Can we expect to see Kench responding to the challenge of Rob Elmore of Tymshare and publishing the really critical figure of the number of actual paid messages delivered by QuikComm over a one month period (*BMS* February 1)?

Confusing abbreviations

YOUR article, *Mr Bell's Orphans Come to Market* (*Company News*, *Computer Weekly*, February 23), has been brought to my attention. As there is room for significant confusion between my own company, PA Computers and Tele-

communications, Pactel, and Pacific Telesis, which has a confusingly similar abbreviation for its name, it would be helpful if you could adopt the practice of referring to them in full as Pacific Telesis, rather than using the abbreviation.

As a last resort, if you feel that the abbreviation cannot be avoided, you will note that they spell it PacTel. This is a small difference but, we hope, enough to minimise the potential confusion outside North America.

I would appreciate it if you could take steps to make the distinctions clear, so that potential problems and embarrassments between Pacific Telesis, our clients and ourselves can be avoided.

JOHN E. JARVIS
International chief executive
Pactel
London SW1.

Personal integrity?

AS a loser I object to the tone of Alan Williams' article. How to identify the Losers in Your Team (*Computer Weekly*, March 8). He says, among other dubious things, "In my experience one's gut feel is always right. If you suspect one of your subordinates is cheating, it's almost certain he is. Invariably, you discover that areas of suspicion are but the tip of an iceberg of dishonesty in one manifestation or another..."

Well maybe his judgment is that reliable, but in my experience that of most people (managers included) is not, and such suspicions more often than not arise out of things such as the attitudes of the colleagues of the individual under suspicion towards him.

Not a few able and hard-working individuals are afflicted with the tendency to attract such negative attitudes and to judge

them on this basis, as sadly is often done, is surely wrong.

To me it looks very much as if the author is using his *Computer Weekly* column to "have a go" at an ex-colleague.

Typing postcodes

WITH reference to the letter from Ivor J. Smith (*Computer Weekly*, March 1, 1984), I do not think that the last word has been said yet on the postal codes.

Apart from their use when computing, nobody has said a word about the difficulty in typing. The code for *The Times*, which is, WC1X 8EZ, involves the typist in making the motions, of her shift key, up, up, down, space, down, up, up! It would be difficult to work out a system involving much more changeability.

If the code were like XXXX349, it could be interpreted as XX XX 3 49, and the typist's movements would be only, up, up, up, up, down, down, is only one motion on the shift key.

As for the argument that the Post Office wanted to preserve the existing divisions of the major cities, they have not done so, for in the code for *The Times*, where is the identification of London itself?

Moreover, the very same Post Office (as it then was), thought nothing of its own convenience or of ours when it abolished the London Telephone Exchange names and substituted numbers, making Pinner, for example, equal to 856.

We were expected to put up with the additional hardship of remembering numbers instead of district names. I would not claim that it is easy, but at least, we have learned to live with it. With a postal code of sufficient letters, we

could have at least two of the early letters to help jog our memories on the general area.

Judging by the lack of speed of the current deliveries, it is not too late for British Telecom, a stupid name, to start all over again.

ARTHUR D. DENTON
Littlehampton.

The answers keep growing

THE Puzzler (February 9) asks how to mark the faces of two dice so that the probability of any score between 1 and 12 is the same on one throw of both dice. The proposed solution is: (1, 2, 3, 4, 5, 6) (0, 0, 0, 6, 6, 6)

Whilst Andrew Young (Letters, *Computer Weekly*, February 23) gives another seven solutions, the proposed solution involves only changing five numbers on the second dice. Other solutions are possible.

■ Mark each face of the second dice with a dot. The score equals the number on unmarked dice plus 6 if number on marked dice is even.

■ Mark the second dice with the numbers (7, 8, 9, 10, 11, 12). The score equals the lower of the two numbers, if one dice shows odd and the other shows even, or the upper of the two numbers, otherwise.

■ Blank out the numbers 5 and 6 on one dice, and replace 4, 5, 6 with 1, 2, 3 on the other. Keep rolling the first dice until it gives a number from 1 to 4. The score equals the number on first times the number on second.

■ Number the edges of the dice by placing a number from 1 to 12 on each side of an edge. The score equals the number of the edge facing the thrower.

Sun sets on the cowboy firms

THE days of the "cowboy" computer contracting firm - specialising in dubious jobs and intermittent payment - are all but over. While hundreds of such agencies, some indistinguishable from the average used-car dealership, flourished around London in the 1970s, the present trend is for longer-term, more stable relationships all round.

The sort of operator who sent out woefully unsuitable staff, offered little in the way of back-up or advice, and - in at least one case - felt compelled to leave the country, is dormant if not extinct. Most of the rough diamonds have moved on. In short, the computer contracting business has grown up.

A symptom of this has been the dramatic improvement in the contractors' or freelance's status. It could hardly have been worse. That was a common complaint when the tidal wave of freelance workers first hit the market, 20 years ago. To many contractors it seemed that the agencies' attitude

was at best indifferent, at worst blatantly mercenary.

Quite simply, most contractors had no idea about business - and certainly weren't getting one from the agencies. All that has changed.

Today, perhaps 90% of computer freelancers have formed their own limited companies. The reputable agency should aim to give advice on topics like income tax and Vat, not just dump the contractor in at the deep end.

The other side of the problem lies in the way contractors fit into their temporary companies' hierarchies. Unsurprisingly, some permanent staff have been known to object to the use of highly-paid outsiders. Wages of £200-700 a week are not uncommon, although only for the time the contractor is actually in work; unlike his full-time counterpart, he doesn't qualify for holiday - or sick-pay.

Data-processing firms generally are notoriously slow to fill vacancies. Even in an era of mass unemployment most companies have openings, but have no desire to go

through the mind-boggling routine of interviewing and selection. This is where the qualified contractor can come in.

Again, as the professionalism of temporary staff has increased, so internal opposition has diminished. It's up to the agencies to ensure that contractors are suitable in the first place.

All this is unlikely to happen if agencies (and some have) take prospective clients for granted. This is nowhere near as rare as it used to be, but employers should beware. There are agencies and agencies. Circumstances have changed dramatically since the first rush of contractors in the 1960s. Agency fees proportionally have come down while, just as importantly, a real alternative has been made to send out only qualified staff. After all, the contractor is essentially the agency's ambassador to the client. If he doesn't do his job, neither have we.

The client base for contract agencies has never been greater. The supply of contract personnel

- experts on whatever DP problems need to be solved - can literally save a company a fortune in hiring and training permanent staff of its own.

Obviously the key to success for any contract agency is repeat business. As a basis of mutual trust builds up, so employers and staff come to rely on agencies for more than mere brokerage. The importance of continuity here is paramount. Knowing when individual staff will be looking for work obviously gives the agency flexibility in planning ahead.

A contractor returning three or four times - and many do - means the firm must be doing something right. It also helps if the agency is frank about its financial provisions, with both sides, the idea being to make a profit without seeming exorbitant.

The computer contractor is a specialist; more so now than ever. Programmers and analysts are moving in increasingly exotic waters, ensuring that the successful agency has to be techni-

cally au fait with its market. Today, while technological progress continues, there are at least discernible signposts to the future. A good contract agency will employ people who have technical backgrounds established over a long period, will always come clean with a prospective employer; and, most important of all, will offer continuous back-up and support to contractors.

Doug Woodward is managing director of the Span Group, whose subsidiary, Span Computer Contracts, has contracts involving over 100 personnel.

THESE 12 matches from a single composite diagram in which four squares of equal size are outlined. The problem is to move four matches to new positions, to form a new single composite diagram in which only three squares of this size are outlined (and no other shapes).

All matched must be fairly used - no overlapping or other "suppressing" techniques are allowed. See page 79 for solution.

This month's Practical Computing guides you through the exploding 16 bit market

With April's issue of Practical Computing we've got the most detailed guide yet to 16 bit micros. Our free 48 page supplement covers over 80 machines.

There's also a review of the Transportable Computer of the Year, the Kaypro. A special 15 page guide on operating systems. Advice on how computing can improve your health. And your last chance to win a Research Machines outfit worth over £2000.

All in April's dynamic edition of Practical Computing, out now. **Practical Computing**

PLUG COMPATIBLES

When Amdahl threw down the gauntlet to the Blue Giant

Chris Naylor plots the ups and downs since Gene Amdahl had his IBM plug compatible brainstorm back in the 70s

IN 1970 Gene Amdahl, then of IBM, had a very good idea and it went, roughly, like this.

IBM makes lots of money making computers, charges a more than goodly sum for them, and has precious little competition. This is because a customer, once he's bought IBM, gets locked into IBM with no easy alternatives.

Why not provide him with an alternative? An alternative that doesn't involve the customer in having to abandon IBM altogether — just an alternative source of supply for one, pretty essential, piece of kit: the processor.

In short, why not make an IBM plug compatible processor that could be sold straight into IBM's established customer base at a price and performance that would bring tears to the giant's eyes?

Sounds like a good story? Well, however it sounds, Gene Amdahl must have been pretty good at telling it because he persuaded three sources of finance — Heizer Corporation, Fujitsu and Nixdorf — to put up no less than \$50 million on the strength of this tale, simply in order to design and build one processor.

That processor was the Amdahl 470 V6 and it wasn't finished and on to the market until 1975, during which time, one can reasonably surmise, the floorboards of executive offices must have become damp with sweat from the foreheads of those who had put up the money.

In fact, so moist did the foreheads become that one, Nixdorf, pulled out altogether, leaving just Heizer and Fujitsu to foot the mounting bills.

What Nixdorf now thinks about its decision to pull out is anybody's guess — but the two survivors are still shareholders in a corporation with a worldwide turnover approaching the £1 billion mark. And, by the by, Nixdorf itself is said to have recently bought a couple of Amdahl 580 Series machines, maybe just to show there's no ill-will, maybe in acknowledgement of the machine's sterling qualities.

Or, maybe, to work out how much it could have made by staying in.

But a glance at Amdahl's financial figures since 1975, when that first machine hit the market, reveals that backing Amdahl hasn't been the same kind of game as, say, backing IBM when it first took an interest in the thermionic valve.

Certainly, the 470 V6 hit the market pretty hard as a replacement processor for the IBM 370/168, notching up revenues to over \$100 million within about one year.

And the follow-up marketing strategy to the V6 was pretty smooth too. But there have been downs as well as ups in Amdahl's history.

The easiest way is to look at developments in three stages. In the first, the 470 Series is going well; in the second there is something which might reasonably be described as problems; and, in the third, comes the period Amdahl is entering now.

Starting with the first phase, up to 1979, growth and profits were of the sort which would keep anybody happy. This was largely because of the smooth marketing

strategies used to push the 470 Series and because of the technical qualities of the machine itself.

The marketing strategies consisted, basically, not just of having one model of the 470, but of continually beefing it both up and down to keep the technological edge and draw new users into the net.

The beefing-up process came in the form of the 470 V7 (1977) and the 470 V8 (1978) and the beefing down came in the form of the 470 V5 which was a de-tuned version of the V6. Later, in 1979, came the V6.

Later, in 1979, came the V6.

The floorboards of executive offices became damp with sweat from the Heizer and Fujitsu foreheads

The floorboards of executive offices became damp with sweat from the Heizer and Fujitsu foreheads

the Accelerator — a device which enabled V7 users to temporarily increase the performance of V7 machines up to the level of the V8.

Now, amidst talk of beefing up and down either permanently or temporarily, there springs to mind the obvious question: How?

That is, how do you beef up a machine? And how do you beef it down? And, how does the Accelerator do it only temporarily?

After all, if it takes five years to develop the original V6 you surely can't just sling out a new model in a matter of months?

The answer is apparently fairly standard mainframe practice. What you do is to build just one machine — a powerful one. Then you slug it so that it runs slow and put that sluggish version on the market. Remove the slug a few months later and you instantly have an upgraded, higher-powered machine all ready for customers to move on to.

And, as slugging a machine is pretty easy in design terms, you can simply install a switch on the machine so that it can be slugged or not at the user's convenience. And that switch is the Accelerator, option which Amdahl introduced for V7 users — a slug on the V8 which can be removed at will.

At which point, most people wonder why users ever leave the slug in at all — the answer to which is money.

The switch is connected to a device which, in principle, resembles the domestic gas meter. Switch on the Accelerator (ie remove the slug) and the meter starts charging you for it. That way, Amdahl makes more money and the user gets more power.

The user, of course, doesn't

leave the Accelerator on all the time, simply because the meter charges at such a rate that to have the slug removed all the time costs more than to buy the next step up — the V8 which is, of course, an un-slugged V7.

So, really, when you buy your processor, to all intents and purposes, you are buying the same box, whichever model you pay for.

The only factors that vary are the price and the extent to which the machine has been slugged. The more you pay, the less it's slugged and vice versa.

Purists might feel that there's something not quite right about this approach. After all, if the boxes are essentially the same isn't it a little bit odd to charge a customer more, substantially more, just to allow him to run the machine at full belt?

After all, the sales of the slugged version must be making a profit — so what sort of profit exists on the sales of the un-slugged top-end models? Enormous, one would surmise.

There is, however, rather more to it than this. What it amounts to is that the user does his equations in terms of money and mips that is, how many millions of instructions per second he can get for a given price. Double the mips and, for the user, you can double the price, roughly speaking. So, typically, users are happy with this arrangement.

Now turn to the manufacturer's point of view. Both boxes, slugged and unslugged, cost it about the same to make — but only so long as the volume of production remains constant. If it could sell more of the machines it could make them for less, as mass production came into play.

So, how can he sell more? Answer: by offering a cheaper machine.

And, from the users' point of view, cheaper simply means less mips. So, by slugging the machine, a larger market is created which enables overall costs to be brought down, which is of likely benefit to the user in the long run.

There is also a guaranteed upgrade path in the machine series by the successive de-slugging of the machine.

That is how the marketing works. And, in case anyone has any odd ideas, it isn't only Amdahl which has practised this to good effect. It is a fairly standard ploy of mainframe manufacturers — to let users do their sums on a money and mips basis whilst they do their sums on a money and production volumes basis.

The benefit to Amdahl up to 1979 was obvious — it pretty well cleaned up. The benefit to the user was also substantial — by introducing competition into the IBM processor market, the cost of mips fell for whoever they were bought from.

But nothing in this world lasts for ever. Or, at least, machine tangles don't. And the first signs of trouble began to appear in 1979, after the 470 had been on the market for four years.

It wasn't disastrous trouble (Amdahl is still there) but it was a combination of unnerving occurrences. For a start, IBM started rocking the boat with the announcement of the 4300 Series,

which made everyone wonder what was going to happen next.

At about the same time, the computer industry itself started to slide into one of its periodic spells of recession — and the effects at Amdahl of recession and uncertainty showed themselves in the form of a first-time drop in profits in absolute terms coupled with a drop in turnover. This is the second phase of Amdahl's existence.

In 1979, Amdahl negotiated \$260 million of credit to keep the wolf from the door while it worked on new plans. In 1980, it acquired Tran Telecommunications Corp to get itself a foothold in the communications business. In the same year, it raised more money with a \$35 million stock offer, announced the 4705 front-end communications processor and, later, it announced a new machine series — the 580.

But IBM wasn't asleep during this time. The 308X was announced; prices of the 303X were cut; and word spread concerning a new IBM operating system — MVS/XA.

The official Amdahl line is that these things were sent to try the company, not to destroy it. But in 1981, Amdahl raised a \$370 million line of credit which argues two things: one, that it was still seen to be very viable; and two, that it anticipated a pretty hairy grind in order to stay there.

Both arguments seem to have been sound. Amdahl appears to be currently very viable, having added Fujitsu-manufactured 6000 Series disc drives to its range and, finally, launched the 580 Series. A glance at its 1983 figures tends to confirm this view.

But it must have been a grind,

Amdahl aimed to sell the plug compatible processor at a price that would bring tears to the giant's eyes.

which made everyone wonder what was going to happen next.

Both arguments seem to have been sound. Amdahl appears to be currently very viable, having added Fujitsu-manufactured 6000 Series disc drives to its range and, finally, launched the 580 Series. A glance at its 1983 figures tends to confirm this view.

But it must have been a grind,

The first 580 was installed one and a half years after it was due, because it is said, of problems experienced with the input/output processor — although rumour has it that a contributing factor was the need to accommodate MVS/XA.

This kind of delay cannot be

processor manufacturer. It can offer comms and it can offer drives. Buy your printers where you will, but you could not go totally Amdahl and forget IBM altogether. Not that anyone will ever really forget IBM — practically every industry standard there is comes from that stable.

But it may be less fair to regard Amdahl as an IBM plug compatible manufacturer simply because its kit adheres to IBM standards and runs IBM software. Perhaps it would be more realistic to say that some computer manufacturers don't adhere to the de facto standards set by IBM and that it is these, and not the IBM plug compatible manufacturers which should be viewed as the industry's potential poor cousins.

As for Amdahl's marketing, some things in life may change, but this shows little sign of it. At least, not in its processor strategies.

The basic machine is the 580 which, as you've probably guessed, can be slugged down into a 5850 or 5840, either of which can have an Accelerator fitted to slugging them for short periods. Upgrade from the 5860 and you get the attached processor 5870 and, from that, the dual processor 5880.

For the user, this is simply a smooth progression upwards for compatible machines which also happen to be IBM-compatible.

For Heizer and Fujitsu, which still remain shareholders in the action, it must look like a new Amdahl Corp — a return to the period 1976 to 1978 with the added attraction of diversification.

You can almost see the dollar signs twinkling in their eyes. Chris Naylor is a freelance journalist.

It is no longer realistic to regard Amdahl purely as a plug compatible

processor manufacturer

good for a firm which, some feel, is able to deliver faster than IBM.

But with the 580 Series now well and truly available, we get to the third stage of Amdahl, the current phase, and the question arises: what, actually, is Amdahl?

The answer has to be that it is no longer realistic to regard Amdahl purely as a plug compatible

PLUG COMPATIBLES

ICL: battered but still undismayed

Despite the failure of Atlas, ICL is hanging on in there says John Kavanagh

OLAF VON BULOW is cheerfully frank about the fact that ICL has won only three customers for four of its Atlas 10 IBM-compatible mainframe in two-and-a-half years.

"I haven't taken off," says the director of the Atlas division. "The systems have proved tougher to sell than we expected. We hadn't expected IBM price-cuts or that the company would be so flexible on pricing or that there would be such a huge drive on XA."

XA is the extended version of IBM's flagship operating system, MVS, so far ICL has concentrated on MVS, but it will start delivering XA in July.

Meanwhile competitors in the IBM-compatible market laugh off ICL's attempts to break into the business. And even senior ICL users say they are not taking the company seriously.

Von Bulow shrugs all this off and points to ICL's wider "IBM surround" strategy. This dates back to the earliest days of Robb Wilmot's reign as managing director. He joined in May 1981; a month later, the System 25 distributed computer was launched as the first major product line to offer links into IBM's systems network architecture (SNA).

A month after that came the DRS 20 distributed processing range with its IBM links.

As von Bulow says, "Robb Wilmot has forced ICL to look outside its own customer base after stagnating in the late 1970s."

In between these 1981 product launches came an agreement with the big Japanese manufacturer, Fujitsu. The company would supply ICL with the technology for its next round of medium and large mainframes — and Fujitsu's top-end IBM-compatible mainframes would be sold by ICL.

The machines are Fujitsu's Facom M380 and M382 single- and dual-processor systems. They are claimed to be faster and more reliable than rival machines; the logic chips have a packing density of 1,400 gates per chip, and Fujitsu has recently moved to 256K memory chips. The average meantime between failures on all Fujitsu M380 installations is 7,000 hours.

ICL sells complete Fujitsu systems, including peripherals. Von Bulow points out that this guarantees complete compatibility, and rules out disputes between separate suppliers over system faults.

ICL has dropped the Fujitsu operating systems and offers only IBM systems.

Atlas prices are up to 50% less than IBM's for comparable machines. "Users expect at least a 25% price cut if they are to move from IBM, mainly because of IBM software support," von Bulow says.

The Atlas division has ground 15 people. Most of the staff have IBM experience, having worked for IBM, a compatible processor supplier or a user, or having come from ICL's old System 4 mainframe operation. The System 4 was similar to IBM's equally ancient 360 family.

There are 15 people on software support and 10 on hardware support. Another seven people report to know the machines inside out. In addition, external consultants are called in to advise if necessary.

With his mixture of staff and ICL's background, von Bulow feels ICL can convince users it has

the support resources and networking experience. This view is supported by the first Atlas user, the Science and Engineering Research Council (SERC), which replaced two IBM 360/195.

"ICL has proved a very good supplier," says Dr Bob Hopgood, head of computing. "Looking back, we were more apprehensive than we needed to be. And I think ICL has done a lot better than the company itself expected. We have maintained support but we've not needed a lot of ICL people running around."

Traditional ICL users have yet to be convinced. A senior member of the ICL users association says: "We haven't discussed Atlas formally, but privately we wonder what ICL is doing in this market at all."

"The market is full already with established firms like Amdahl." Some users suggest that Fujitsu forced ICL to take the Atlas range as part of the technology deal. Von Bulow denies this.

On the other user views he says:

Wilmot has forced ICL to look outside its customer base

"Our 2900 customers understandably have a foggy picture of what we are doing. Siemens in Germany took the Fujitsu kit and stopping building its own. We're not like that; we're not swapping our 2900 customer base for an MVS base."

ICL's competitors are scornful of the company's Atlas business. This is only to be expected — but talking independently of each other they take a similar line. Bryan Little, managing director of Amdahl in the UK, says ICL "lacks conviction" in the commercial market, although it is stronger when going for government contracts.

National Advanced Systems, with 50 staff and 40 UK customer sites, is less restrained in its comments. "We don't even see ICL as competition," says marketing manager, John Clements. "If our performance or Amdahl's had been like ICL's, we would have been closed down long ago."

Von Bulow does not try and bluster his way out of this corner. After the SERC order, ICL won a contract from a long-standing 2900 customer, J. Salisbury, and last month its third order came from the RAF, which is replacing System 4s with two Atlas machines and 45 disc drives.

ICL is also bidding for four other contracts and is close to winning one of them — in the commercial sector.

"When Robb Wilmot negotiated the Fujitsu agreement, IBM had only launched the 3081D,"

von Bulow says. "But a string of other models followed. There has also been the new IBM pricing flexibility. So at the start, there was a clearly-defined high-performance market — but IBM's subsequent moves changed all that."

Hopgood at SERC says that ICL was "keen to sell Atlas and made us an attractive offer". Von Bulow agrees — but says ICL did not make a loss on the deal.

His hope is that the market will eventually turn on IBM. "IBM just can't carry on like this, making people live in fear and running the market just as they please," he says. "In Greek tragedy it's called hubris — and one day it will hit IBM. We will have to hang on in there."

IBM has dominated the industry since the late 1950s. ICL has been hanging on in there since 1981. But von Bulow still stays cheerful. John Kavanagh is a freelance journalist.

Von Bulow... "Atlas systems have proved tough to sell."

the support resources and networking experience. This view is supported by the first Atlas user, the Science and Engineering Research Council (SERC), which replaced two IBM 360/195.

"ICL has proved a very good supplier," says Dr Bob Hopgood, head of computing. "Looking back, we were more apprehensive than we needed to be. And I think ICL has done a lot better than the company itself expected. We have maintained support but we've not needed a lot of ICL people running around."

Traditional ICL users have yet to be convinced. A senior member of the ICL users association says: "We haven't discussed Atlas formally, but privately we wonder what ICL is doing in this market at all."

"The market is full already with established firms like Amdahl." Some users suggest that Fujitsu forced ICL to take the Atlas range as part of the technology deal. Von Bulow denies this.

On the other user views he says:

The computer system you choose rather depends on the life you wish to lead.

We'd argue that running a busy on-line transaction processing department is one of the most important jobs in the whole organisation.

After all, more often than not, the company's profitability depends on it.

But at times it can seem a thankless task.

On the one hand, when things are running smoothly, people hardly know you're there.

Understandable. It's the salesforce and the front men who get the glory.

But when things go wrong, everyone wants to know.

From the Chairman down.

Also understandable. Because when an on-line computer stops, the business stops.

So why buy a computer that fails?

Zero downtime—the key to Tandem's success.

Our unique, patented architecture is based on multiple independent processors and is designed to prevent any single component failure, in any part of the system, from causing a complete stoppage.

It is also designed to eliminate any risk of data corruption.

Yet it doesn't mean you're paying for a resource that stands idle waiting for a breakdown.

The whole of the system works, the whole of the time.

Even during maintenance.

And, would you believe, even during expansion.

How to expand your system without closing down.

Once you've outgrown a conventional system there's but one thing for it.

Replacement by a larger, more powerful system.

And that's enough to strike terror into the most seasoned computer man's heart.

Well, now you can forget such disruptive horrors.

Because with Tandem,™ expansion is simply a matter of plugging in and plugging on.

Business as usual.

It is possible, for instance, to build up from 2 to 16 processors in one system, with each system capable of handling hundreds of transactions per second.

And you can build all the way up to 255 full size systems without stopping, rewriting or reprogramming.

That could be 255 different locations worldwide if you wish, giving you the power of over 4,000 processors all in one totally integrated network.

And what's more, your investment in systems and programming is protected.

Speaking of investment brings us to another point heavily in our favour. Compatibility.

We get on exceedingly well with our competitors.

You couldn't wish to meet a more sociable computer than Tandem.

It will 'talk' to virtually every other make of computer on the market.

Not to mention telexes, PBXs, other networks, and word processors of practically every make, shape and size.

Wherever they are, anywhere in the world. A fact which even the most hard headed financial director should find extremely compatible.

The computer that doesn't fail has won again.

Ask any of our customers if our systems are as good as we claim them to be. We think we know their answers.

Because according to the important 1983 Cowan/Datamation survey in the USA, Tandem recorded a higher level of customer loyalty than any other manufacturer.

Not just last year. Or the year before. But for the fourth year running.

Praise indeed for simply helping our users out of the hot seat and into a quieter, more peaceful life.

Make your first move by contacting us today.

Fierce rivalry rages in the compatible community... Keith Holder reports

Vendors keep IBM right up on its toes

THE plug compatible mainframe, machine which can be substituted for an IBM computer without loss of function or change of programme or operating system, has kept IBM on its toes since 1975.

Of the manufacturers who make their living from IBM's customers by persuading them to adopt these compatible processors, the Japanese company Hitachi has become one of the most successful with a 48% slice of the plug compatible cake.

Its machines do not merely match, but surpass the performance of IBM's range by a comfortable margin, and have maintained a 20% price performance advantage over "Big Blue" since their launch. They not only replace IBM machines but offer advantages to the user like air-cooling, improved reliability, maintenance and support.

Hitachi is unusual, however, in that its machines are available from three vendors: National Advanced Systems (NAS), Olivetti and BASF. This trio sells into the same market competing with each other.

Just why the Japanese company decided to set up deals where its distributors would find themselves in competition was never explained at the time. The most popular, privately expressed, opinion from the companies themselves is that Hitachi, in the light of its embarrassing experience with its distributor Ite, which crashed in 1979, had decided never again to put all of its eggs into one basket.

Instead, it wanted to present a solid local image, from established name companies in Europe, copying IBM's image strategy.

Once the three distributors began to deliver their first machines, the first of a series of highly unsuccessful negotiations began between them. These were aimed at carving up the market into sections which would become exclusively exploited by only one company.

Eventually, despite some published reports about what would become of Olivetti's computer division and whether NAS would ever speak to the Japanese again, the stage was set and the three continued to trade - with varying degrees of success.

The situation today is that the market has declared NAS the clear winner in the contest of European marketing ability, with almost 30% of the total market. BASF has just over 10% and Olivetti about 7%.

Of the three, Olivetti has suffered most in recent times, while BASF's order book suggests its position will improve. Olivetti's poor performance is said, by Jeff Evans, manager of its new plug compatible division, to be attributable to a lack of understanding by the main parent company. He says salesmen were required to sell a variety of products alongside the plug-compatible computers, and were never able to match the efforts of its rivals.

This was despite a first year which showed the company doing well, selling 18 Hitachi machines and 37 IPL processors: well over the company's forecasts. Many of these sales were, understandably, in Italy.

After this, things got steadily worse, to the point where there was serious speculation that the company would drop Hitachi's range altogether, though continuing to support its existing user base.

At the time, Olivetti, in theory, offered the complete Hitachi range, though Evans says that in practice, the company only concentrated on the higher powered machines.

Times have changed, says Evans, as has the company's approach to selling plug-compatibles. The plug compatible division, formed this year, is getting into its stride and plans to capture 10% of the market over the next two years.

Although the recent 20% share acquired in the company by AT&T does not directly affect this sector of Olivetti's business, it does rule out the possibility of marketing new products from AT&T in the future.

Both NAS and BASF have expressed unflattering opinions of Olivetti's ability to stage a comeback, but Evans is adamant that the division has a bright future. It has added some new machines to its range in the last month, two from Hitachi and one from IPL.

Whether Evans' more aggressive stance pays off with orders only time will tell. He says the announcement of some major orders is imminent.

BASF's computer systems marketing manager, Rolf Brüllinger, is even more ambitious, and aims to see his company number two only

to IBM in Europe. The company relies totally on Hitachi for its computers which range from low-end medium systems, equivalent to the 4031, to large-scale machines able to compete in the top of the 308X market. It has traditionally sold large numbers of machines for leasing, but is now more concerned with selling direct, he says.

Brüllinger is a realist, however, and realises that the road to a larger slice of the market needs a softly, softly approach, where it is important to get a foot, or more precisely a processor, in the door and work up from there, rather than going for all-out strategies.

Top of the Hitachi tree is NAS.

The road to a larger slice of the market needs a softly, softly approach, where it is important to get a foot, or more precisely, a processor, in the door

Rising out of the ashes of Ite's failure, the company has steadily clawed its way up the market share ratings to the point where only Amdahl sells more machines.

Like BASF, it relies solely on Hitachi for machines, though this was not the case until early 1983, when its parent NatSemi stopped production of its AS Series.

One cloud over the company's operations was the IBM lawsuit which accused NAS (along with Hitachi and NatSemi) of stealing its secrets. This was resolved recently with NAS emerging relatively unscathed - it had only to pay IBM's legal costs of \$3.5 million, and it maintains its innocence.

The consensus among all Hitachi's distributors is that the so-called Japcan, with its provision for IBM to inspect all Hitachi's new processors before release will not affect the market.

In the future, there is the likelihood that NAS will expand its sphere of influence. One possibility is that it will take on Hitachi's S-810 array processor, able to battle with companies like Cray. This would be a logical move as the company's top end 9000 series machine can act as a front end.

Hitachi is known to be at an advanced stage with a machine, which will provide its answer to IBM's Sierra multi-processor mainframes which are expected around November this year.

There is still no sign of any agreement between the three distributors on market sharing, and so the sometimes bitter fighting to decide who will sell you a Hitachi processor continues.

PLUG COMPATIBLES

Why it suits IBM to tolerate and contain its imitators

The giant is simply not worried, writes Kevan Pearson, although from time to time it takes action to sort them out

THE IBM plug compatible business is now over 10 years old and if US IBM watchers are to be believed it is hitting somewhere around 10% of IBM's business.

That is the level at which it has been said, many times, that IBM would take action against the companies involved. So is IBM gunning for their rivals? Will it put them out of business?

If we look back over the period since the US anti-trust (dominant company) case was dropped in January 1982, we can see a distinct change in IBM's behaviour both in the market and in the courts.

On the one hand, IBM has become very much more price-competitive, which has obvious implications for the plug compatible suppliers. As Bob Hogarth, who has just taken over as divisional manager of BASF's UK computer division, says 70% of the appeal of the lookalikes is financial, the other 30% is in offering superior support.

In the courts, IBM has gone from being the sinner (in the eyes of the law) to being the sinned against. Witness the trade secrets case against Hitachi, one of the major suppliers of IBM-compatible machines and peripherals, and National Advanced Systems (NAS), which sells the start-up ventures riding on the back of the IBM Personal Computer. Unfortunately, most of the companies were set up to exploit IBM's proprietary information. That is an echo of the allegations in the Hitachi-NAS case.

So IBM has certainly changed its whole attitude to competition. But it is not only the plug compatibles that IBM is worried about, if IBM is worried.

Nor is IBM worried about the Bunch (Burroughs, Univac, NCR, Control Data and Honeywell). It is said by IBM watchers that in terms of the number of new PUs shipped each year, the plug compatibles are now as big as the Bunch. Obviously, in overall terms, Amdahl, with its \$778 million sales, is nowhere near as big as, say, Burroughs in revenue terms, but it could certainly ship as many CPUs in its own class.

So IBM is not worried about the lookalikes, and it is not worried about the Bunch, what is IBM worried about and just why has it acted as it has done over the last two years or so?

There are two threats looming on IBM's horizon: the newly de-regulated American Telephone & Telegraph (AT&T) and the Japanese.

AT&T can safely be left out of any discussion of the plug compatible business, except for the fact AT&T is very important in IBM's overall picture, and that has serious implications for anyone else living in the IBM world. But AT&T is unlikely to get involved in the plug compatible business. It is far more likely to challenge IBM in the burgeoning office automation market.

The Japanese are far more significant rivals because they are the major suppliers of CPUs and peripherals. NAS and Amdahl, the two biggest plug compatible manufacturers, both have major links with two of Japan's largest computer manufacturers: Hitachi and Fujitsu. As John Curran, vice-president with NAS, says: "By 1990, there will be only two computer manufacturers - IBM and the Japanese."

To deal with these two threats, IBM obviously wants to keep a close watch on what is going on in

its own back yard. So while the plug compatibles don't figure largely in IBM's view of the world in their own right - it has even been said that at the very top level IBM executives don't even know they exist - they are important because they present an additional complication, and one which IBM from time to time feels the need to sort out.

They are active in just about every aspect of IBM's business - from software - both systems software and applications - to

It has been said that at the very top level IBM executives don't know plug compatibles exist

hardware: discs, CPUs, personal computers and terminals.

Undoubtedly, the most successful area has been CPU manufacturing. With IBM setting margins of about 60% on its largest processors, there has been plenty of room for third parties to undercut IBM's prices. But the first two successful suppliers - Amdahl and Ite - found that manufacturing advanced processors to

KUTNICK... "It is when not if as far as XA is concerned?"

compete with IBM was neither simple nor cheap.

Amdahl, founded by Gene Amdahl in 1970, was the first really successful maker of IBM-compatible CPUs. Others had delved into the market before, like Honeywell in its very early days, and electronics and telecommunications giant RCA, in the days of the 360, tried to take IBM on; it failed.

But Amdahl quickly realised the difficulty of adopting the IBM approach and doing everything itself, consequently a deal was struck with Fujitsu. Fujitsu took about 30% (early this month it upped its stake to 50%) and became a major supplier of basic components such as chips and boards to the company.

Ite, which was the world's largest leasing company, had two sources of supply: Hitachi, Japan's second largest computer manufacturer behind Fujitsu, and National Semiconductor. NatSemi picked up Ite's CPU business for a song and re-christened it National Advanced Systems (NAS) when the launch of the 43xx series in 1979 (with its massive improvement in price/performance) forced Ite into bankruptcy.

Both NAS and Amdahl are heavily reliant on Japan, even today. It is almost certainly true that there would not be an independent IBM-compatible CPU industry today without the Japanese.

Two factors enabled Amdahl to survive against the odds: Gene Amdahl, chief architect of IBM's 360 series, and Fujitsu. Between them they enabled Amdahl to offer technically and technologically advanced systems at a significant saving over IBM, even with IBM's massive manufacturing economies of scale.

Amdahl managed to come out with his first machine in 1975 and the company is still going strong today.

Ite, no longer with us, was not killed by its plug compatible business: it was killed by mismanagement, and the impact of the 43xx on leasing. Ite had cornered the market in 370/145s, 148s, 155s and 158s - the very machines whose values were decimated by the 43xx. Exit Ite.

NAS, which inherited the Ite user base, had a few difficult years immediately after the collapse of Ite, but it too is going strong now, with the technological backing of Hitachi, of course.

Life for the plug-compatible disc companies has been both better and worse. Memorex, Storage Technology and Control Data (CDC) have all competed in this market for years, and they have now been joined by NAS, Amdahl and BASF (another company which sells boxes built by Hitachi).

The CPU companies have moved very successfully into peripherals. Sadly, for the disc-makers, their attempts to move into the CPU business have been far from successful (except for Control Data which does not sell IBM-compatible computers).

Memorex was the first to try, back in the early 1970s. The costs of that project pushed the company to the brink of bankruptcy. It partly recovered but was finally taken over by Burroughs in 1981.

Storage Technology was next to try with an announcement in the early 1980s that it would make a whole range of CPUs to compete with IBM. But it was having trouble on other fronts. Two of its product lines - a 3370 compatible disc drive and virtual storage subsystem - were both dropped, and Storage Technology's earnings dived. IBM finally got its 3380 drive right and so the 3350 compatible business dried up.

None of IBM's rivals was able to adequately respond to the 3380 in reasonable time: if IBM, with all its research resources, got it wrong, the plug compatibles were bound to hit problems. They are just coming to the market with their drives about 18 months after IBM.

CURRAN... "By 1990 there will only be two computer manufacturers - IBM and the Japanese."

new: it was killed by mismanagement, and the impact of the 43xx on leasing. Ite had cornered the market in 370/145s, 148s, 155s and 158s - the very machines whose values were decimated by the 43xx. Exit Ite.

None of IBM's rivals was able to adequately respond to the 3380 in reasonable time: if IBM, with all its research resources, got it wrong, the plug compatibles were bound to hit problems. They are just coming to the market with their drives about 18 months after IBM.

Then, in January this year, Storage Technology announced it was stopping its CPU project: it had run into both technological and financial problems.

The government wanted nothing less than to break IBM into several smaller organisations. If IBM's competitors have not had

an easy ride, for reasons which have nothing to do with IBM.

IBM, for its part, has sought to put additional pressure on them through assiduous use of "FUD", fear, uncertainty and doubt. Gene Amdahl was first to use the term in public, but he says it was in use inside IBM for many years before the outside world got to hear of it.

It used FUD in various forms: leaks and unofficial pre-announcements, particularly to Wall Street IBM-watchers, technology and sometimes pseudo technology, and above all, through the finest marketing and sales force the world has ever seen.

Amdahl, which has very strong links with Fujitsu, has just reported record results. And NAS, which settled its case out of court with IBM in January - still proclaiming its innocence - had a record nine months up to the settlement, according to its president David Martin.

He has always accused IBM of using the lawsuit as a marketing ploy. Although NAS was named in a civil case by IBM, it was not named in the criminal case in which Hitachi pleaded guilty.

Overall, IBM's attitude to the plug compatibles is one of containment. Even today, Amdahl and NAS, the two biggest, are barely as big as 2 1/2% of IBM overall business.

They can still offer a better deal, usually on better products than IBM. So why have they not been more successful? Because of FUD.

The market exists because IBM is a conservative beast and plug compatibles can offer better performance for less money. They also offer better support, usually, and that can't be bad, because IBM's support is very good.

Extended architecture (XA) and the possible launch this year of the Sierra/Trout range are the major clouds on the horizon.

Pcm XA deliveries have slipped, but as Dale Kutnick, research director of the Yankee Group, says: "It is when not if, as far as XA is concerned."

Sierra shouldn't prove too much of a problem either. The plug compatibles are here to stay.

IBM has forced any of the lookalikes into liquidation through direct action, as it undoubtedly could have done, it would probably have lost the case. It was just the excuse the Justice Department was looking for. IBM had no intention of providing that excuse.

Instead, the company chose to launch new products strategically, like virtual storage, like the 43xx and like MVS/XA to cause maximum FUD. This worked and the plug compatibles had a few lousy years to start with. But they survived, by offering a better deal with IBM, and often superior products.

Amdahl, which has very strong links with Fujitsu, has just reported record results. And NAS, which settled its case out of court with IBM in January - still proclaiming its innocence - had a record nine months up to the settlement, according to its president David Martin.

He has always accused IBM of using the lawsuit as a marketing ploy. Although NAS was named in a civil case by IBM, it was not named in the criminal case in which Hitachi pleaded guilty.

HOW TO CATCH UP ON CAD BEFORE IT CATCHES UP ON YOU

April 3-5, 1984 Brighton Metropole
Open 10am-6pm daily 10am-5pm on final day

If you're involved in draughting, design, manufacturing, engineering, graphics, or using a computer, a visit to CAD '84 is not just important - it's essential.

For here, all under one roof, you'll find out everything you need to know about computer-aided design. How far it has come. Where it is going. What impact it will have on your business. And even your job.

CAD '84 is the sixth exhibition in the highly successful series. And it's going to be the biggest ever.

You will be able to see and use the products and find out how CAD is being integrated into total manufacturing systems.

CAD/CAM is one of the most important areas of the new technology. Make sure you keep ahead of what's happening.

For entry to the exhibition complete and present the following complimentary registration ticket.

CAD '84 CONFERENCE

When you've seen the systems, find out more about the ideas and thinking behind them. Hear about other users' experiences with CAD/CAM, at the biennial CAD CONFERENCE being held concurrently at CAD '84.

Topics will include: design techniques; implementation and use of large turnkey systems; interactive techniques; plant design; the impact of the smaller computers on CAD/CAM; expert systems and electronics.

Building design, civil and structural engineering, mechanical engineering, electrical and electronic engineering and geometric design will also be covered.

If you would like to attend the CAD CONFERENCE contact Joanna Wexler, Conference Organiser, CAD '84, Butterworth Scientific Ltd, PO Box 63, Westbury House, Bury Street, Guildford, Surrey GU2 5BH, England. Telephone 0483 31261. Telex 859556 SCITEC G.

YOUR COMPLIMENTARY REGISTRATION TICKET

This ticket will save you £2.00 on entry to CAD '84.

For your FREE ENTRY TO CAD '84 EXHIBITION, just fill in and submit this form on entry

PLUG COMPATIBLES

The industry leader could quickly pull the plug on the plug compatibles says Steven Sonsino

It pays IBM to leave gaps

LATE last year, during one of the many anti-trust cases then proceeding against IBM, the EEC insisted that IBM publish full technical specifications of the interfaces it used in links to peripheral equipment. This would give the plug compatible peripheral manufacturers a fair chance of developing alternatives to IBM products early on in the life cycle of the IBM product.

IBM consistently refused to publish any such details, saying that to do so would give away important trade secrets. But it shows that IBM considers peripheral manufacturers and interfaces very important.

National Advanced Systems, a major plug compatible manufacturer, explains that one of IBM's strategies would be to encourage standards authorities to leave loopholes for plug compatible manufacturers in their interface specifications. In this way, IBM would be able to control and even encourage the competition to go down just one path. It would force the competition to fill the gaps in the market to fill in for itself.

One such gap was provided - albeit unwillingly - when the

3380 disc drive was launched by IBM, then withdrawn because of technical problems. It finally arrived on the market a year later - too late.

The problems themselves cost IBM dearly. This opened up the market for companies like Memorex, Storage Technology and Hitachi. National Advanced Systems also has a compatible product, the 7380, and this is already installed on some UK sites.

Plug compatible manufacturers hold about 20% of IBM's peripheral market, but there is enough for everybody. Some observers be-

Disc drive technical problems cost IBM dearly.

lieve IBM could put these companies out of business in 12 to 18 months if it wanted to, but it is unlikely to do so for various reasons.

IBM leaves gaps in the market

that it is not prepared to fill. These gaps typically include difficult installations that need special hardware or software, and in IBM's eyes, such products will have a limited appeal. Other reasons are political, and some have legal, anti-trust implications. IBM is as trapped in the compatible marketplace as are its plug compatible rivals. It has moved away in some areas - the excursions into extended architecture, for example - but the making of compatible products can only go on. The users hope so, anyway.

IBM has become more active in several key areas that it had no part in before. One major change is the company's attitude towards price-cutting. IBM appears to be far more willing to do deals than ever it used to be.

This is welcomed by users, but unsettling for competitors. "When IBM starts cutting prices, you have to follow," says Chris Delle, sales and marketing director for Computer Peripherals (Systems), sole distributor for Telex equipment in the UK.

Telex is an American corporation that started selling IBM-compatible disc drives in the 1960s. After a number of anti-trust suits against IBM, the European arm of Telex was sold to Memorex in 1977. The company then restricted itself to selling peripherals to the US domestic market.

There was a four-year moratorium on Telex selling into Europe, but now that is over, and the company is back with a range of peripherals for the IBM market. The range includes a 12-inch small screen terminal, the 178. This costs about £1,000, considerably less than the IBM product, the 3178.

Over 3,000 of these terminals have been installed worldwide, says Telex. They can be leased and on-site maintenance is offered. Telex hopes this package deal will tempt buyers away from the IBM salesmen.

A product that fills a typical IBM gap is the 286P daisywheel printer. This prints bi-directionally at 70 characters per second. It attaches to any 3270 system, including the 15-inch 278 terminal from Telex.

A double-sided, double-density floppy disc drive and a 10 Mbyte Winchester are planned for Profit, Telex's personal computer system.

In 1982, Telex achieved a turnover of \$274 million, of which \$211 million were provided by Telex Computer products. Telex has delivered over 100,000 3270-compatible units, and in September its manufacturing plants doubled their capacity to 6,000 units a month.

The agreement for Memorex to sell 3270-type equipment expired in 1981, and the company returned to selling only its own range of peripherals, mainly the range of mass storage products.

About three years ago Memorex was about to go broke because of the huge debts it had incurred over

the previous three to four years. At the last minute, however, Burroughs bought the ailing company, and paid off its debts, with \$15 million. Many said that Burroughs was foolish.

But it now appears this was a shrewd move by Burroughs. In just 12 months, Memorex repaid Burroughs (in cash) more than Burroughs had paid for Memorex in the first place, including debts.

Acquiring Memorex has given Burroughs a place in the plug compatible peripheral market and a bigger captive base on the OEM side. Burroughs makes only one request of Memorex - that any new products are fit either for the IBM market, the Burroughs market or the OEM market. This seems to work quite well for most of the Memorex fixed disc drives, the 5.25 inch ones in particular.

Memorex is about to introduce a 5¼-inch removable hard disc

IBM is as trapped in the compatible marketplace as are its plug compatible rivals

drive, which has already generated a lot of interest, particularly from ICL. There are also certain established personal computer manufacturers interested which might wish to turn the drive into a sub-system product for their micros.

Few companies are actively involved in the optical disc store market, but already there is a diversity of products that makes standards talk inevitable.

The units emerging for evaluation and installation are eight, 12 and 14-inch drives, and most of the disagreement appears to be in the 12-inch area. This is because it is where most of the drives are.

Optical drives appear to be aimed at the 16- and 32-bit mini and microcomputers. Because of this, some manufacturers are making their products compatible with the small computer standard interface, SCSI, which many of these machines use.

Shipments of the 7600 optical storage sub-system from Storage Technology are expected in 1984.

Steven Sonsino is features editor of Systems International.

PLUG COMPATIBLES

PC lookalikes are under fire

While IBM decides how similar is 'similar' in court, PC compatible makers may find it tough, says Robert Piper

UNTIL very recently there seemed to be a widespread belief amongst business micro manufacturers that IBM was not over-concerned about the burgeoning number of IBM-PC compatible machines appearing on the market. In fact, some observers believed that IBM passively encouraged the practice by allowing third party systems designers and software houses easy access to the PC's open architecture.

What brought about a policy change at IBM is a matter of speculation, but its recent actions against Corona Data Systems and Eagle Computer for copyright infringements must be seen as warning shots across the bows of all compatible manufacturers.

Whether IBM intends to take similar actions against other offenders is not yet clear, but there can be no question that it has the legal muscle to make life very difficult for them, and the next few months could see some fundamental changes in the market place.

The IBM-PC has never been regarded as a technically advanced machine. Based on a semi 16 bit processor, the Intel 8088, and providing, in the most popular set up, dual 320K disc drives and 128K of RAM, it could be asked why other manufacturers should want to copy such a mundane design.

If the machine had not borne the magic letters "IBM" it would probably have been doomed to a life collecting dust on dealers' shelves. The tremendous respect those initials commanded in the office environment gave it enough impetus, especially in the US, to initiate the self-sustaining cycle based on the premise that the more users a machine attracts, the more software is written for it. In other words, the more software the machine has, the more users it will attract.

A PC-compatible should be able to run almost all the software currently available for the IBM. It should also be able to accept all the hardware enhancement options available for the IBM, currently reaching staggeringly high numbers in the US without the need for any modifications.

PC-compatible manufacturers attract customers away from IBM by offering two main incentives. The first and primary incentive is one of an initial cost saving.

The second incentive is to offer a greater expansion potential by increasing the number of bus extension slots for extra cards on the motherboard.

PC-compatibles invariably have a very similar hardware specification to that of the IBM. An 8088 processor, dual 160K or 320K disc

drives, and 128K of parity checking memory are proving to be the norm. Keyboards are often an exact copy of the IBM layout, even to the extent of the peculiar and much criticised return and shift keys, although some offer an option to have these replaced by the more acceptable variety.

Software compatibility is much harder to assess as it obviously does not lend itself to simple visual checking. The heart of the IBM, and the area where copyrights are most easily enforced, is the machine's basic intelligence held in ROM.

IBM chose to use Microsoft's PC-DOS as the operating system for its PC.

The acceptance of IBM compatibles in the market place has not been as widespread as many expected. There has been a marked reluctance by potential customers to commit themselves to buying what could actually be described as a cheap copy. Compatibility is not a cut and dried issue and no machine, as yet, has proved to be 100% compatible.

IBM has the legal muscle to make life very difficult and the next few months could see some fundamental changes

Even if IBM software does perform faultlessly there is a possibility that any future up-dates will not, because IBM PC-DOS and ordinary MS-DOS operating system are not necessarily updated in the same way each time.

Another possible disadvantage could arise from the unknown quality of the back-up and maintenance facilities. With its PC, IBM offers a very comprehensive service agreement and hand picks

its dealers. It also promises replacement units if a faulty one has to be returned to the workshop for repair.

There are rarely such guarantees from compatible manufacturers, as many are imported from the US by UK distributors who sub-contract their service agreements to third party computer maintenance companies whose efficiency may vary.

IBM-compatible pricing policy is also becoming more critical as the cost of non-compatible micros plummet. With machines like ACT's Apricot selling at approximately £1,000 less than a similar spec IBM and still offering a worthwhile selection of software, customers may decide that they do not want to pay such a premium for IBM compatibility.

IBM itself is probably not concerned by this as its reputation can, to a certain extent, justify a higher price, but if compatible manufacturers link themselves too closely to IBM's pricing structure, they could find themselves looking

increasingly uncompetitive in the overall market place.

The range of 8088/8086-based micros can be divided into four groups related to compatibility with the IBM-PC. The first group is incompatible, and cannot even read IBM data discs.

The second group is data compatible and can read IBM data discs but cannot run IBM software.

The third group is functionally compatible and, as well as reading IBM data discs, can run modified ACT's Apricot selling at approximately £1,000 less than a similar spec IBM and still offering a worthwhile selection of software, customers may decide that they do not want to pay such a premium for IBM compatibility.

IBM itself is probably not concerned by this as its reputation can, to a certain extent, justify a higher price, but if compatible manufacturers link themselves too closely to IBM's pricing structure, they could find themselves looking

The fourth group, which we will look at in greater detail, should run the mainstream of software written for the IBM-PC, accept IBM peripheral cards and present an identical user interface.

The first compatible in this group which arrived on the market a couple of years ago and is still one of the most popular, is the Columbia MPC.

The latest version includes a revised video board coupled to an amber screen monitor to give a really excellent display. The retail price of around £2,900 includes a suite of Perfect software comprising a word processor, a spreadsheet and a simple database.

Also featuring high in the compatibility league table are two computers from Eagle, another US company. Most popular is the Eagle PC-2 which includes two 320Kbyte disc drives and a keyboard which shows under the processor when not in use.

Another portable, which has been available in the UK for some time is the Hyperion. Probably one of the best looking on the market, it boasts a high degree of compatibility, two 320K disc drives, a seven-inch high resolution amber monitor, and a flimsy keyboard.

There are also three very good machines, the Compaq, the Corona, and the Chameleon, just arriving from the US.

British manufacturers have not so far been quick to jump on the PC compatible bandwagon. The Future FX-20 offers partial compatibility, but is a powerful machine in its own right, with dual 800Kbyte disc drives, and a £2,000, good value for money.

Despite IBM's unexpected action against a compatible manufacturer, there can be no doubt that, in the short term at least, the number of PC lookalikes appearing on the market will continue to increase. The same, probably, cannot be said for the levels of compatibility that they will offer.

If IBM does pursue its policy of enforcing copyrights more rigidly, we may eventually see an unwritten set of rules governing how similar compatibles can be.

COMPEC NORTH '84

Belle Vue, Manchester

19-21 June 1984

72% high calibre executives

40% responsible for purchases

36% involved in purchases

COMPEC NORTH '84

COMPEC NORTH is the most influential computer show outside London.

It is THE ONLY northern computer show for DP professionals and serious business users.

And in just three days it gives you concentrated coverage of the most important part of your market: directors, DP managers, and other computing professionals from manufacturing industries, services, consultancies, systems houses, software firms and bureaux.

COMPEC NORTH is now in its fourth year, and once again is being sponsored and supported by the leading journals in the business.

So if you want to be at the centre of influence, reserve your stand now at COMPEC NORTH '84. From as little as £92 per square metre.

For your full information pack with booking details complete and return this form to: Chris O'Hea, Exhibition Sales Manager, Room L310, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS. Tel: 01-661 3125

COMPEC NORTH '84

THE WORLD OF COMPUTING IN THE NORTH

Computer North is sponsored by Computer Weekly, in association with Computer & Systems International, Practical Computing, Software and Microbusiness.

Desks take the pressure

STC Components has introduced a range of professional work centres, desks and cabinets which have been tested using both a 2.5 ton distributed load of individual weights, and by getting a two-ton elephant to exert concentrated pressure on work tops — both actions proving the strength of the units.

Traditionally, work centres have employed welded sections in their construction, generally to strengthen the framework of the units and enable them to support a range of equipment from programmable control systems, peripherals, instrumentation etc, to standard office equipment.

But to provide the structural strength required, STC Components has developed an extrusion for the framework which, with the variety of accessories and novel half-depth pedestal options, not only provides versatility in construction, but allows up to 50% more equipment housing capacity than other systems in the same spatial area, says STC.

How do you carry out accelerated life tests on a range of workstations? To check that initial proving tests were correct in indicating that the new range of Extrusions will be capable of carrying very heavy weights over a number of years, STC Components hired the services of a two-ton elephant to exert concentrated pressure on the units. The result, as can be seen, was more than satisfactory!

Pedestals and cabinets accept all 19in subracks, chassis and panel-mounting equipment and power is supplied via internally or exter-

nally mounted distribution sockets. Cables are housed in trunking which can be fitted exactly where

cable forms are required. STC Components (CW), 190 The Strand, London WC2R 1DU. Tel: (0279) 26811.

System can interface 128 micro terminals

AN addition to the Burr-Brown family of industrial and commercial data processing equipment, the TMC900, is a communications processor for factory floor data collection systems and other multi-terminal networks.

It can interface up to 128 front-end Burr-Brown microterminals to a single communications port in the host computer and has an input response time of normally less than one second for any terminal.

TMC900 performs terminal polling, local validation, error recovery and basic transaction processing. Definitions of up to 100 transactions can be downloaded to the TMC900, and each transaction can have up to 10 prompt/reply editing specifications.

Unless specific validation by the host is required, the host will receive only the variable data for the transaction (tagged and time stamped) when the inputs are complete, says Burr-Brown.

TMC900 has an Intel 8085 5MHz 16-bit CPU in combination with two Z80A eight-bit peripheral microprocessors and a DMA controller to achieve high speed performance. A 128K RAM stores database information as well as data collected, and an optional 5¼in Winchester disc allows 10 Mbytes of unformatted storage capacity when long term stand-alone operation is required.

Serial interface to the host system is RS232C or RS422 communicating asynchronously to 19,200 baud. The operating and communications protocol is a polled command/response format.

The processor is housed in a fan-cooled 7.5cm Rack Mount which is 22.2 cm high; the front panel contains nine LED status indicators and a keylock on-off switch.

Burr-Brown International (CW), Cassiobury House, 11-19 Station Road, Watford, Herts. WD1 1EA. Tel: (0923) 33837.

Teleprinter terminal comes in briefcase

TELEPRINTER Equipment is introducing a new version of the portable Victor teleprinter terminal.

The innovations on the model include the facility to operate from either 110V or 240V electrical supply, and a built-in acoustic coupler which adjusts to accommodate all telephone sizes.

The new machine comes in a briefcase format and weighs, with case, just 15 lb. It has an optional internal modem to CCITT requirements and enables users to plug into computer systems from

anywhere in the world.

One of the Victor's advantages is the use of plain telex paper to keep operating costs down.

Print speeds are 55 cps at 10 cpi and 80 cps at 15 cpi, operating up to 1,200 baud. Full graphics are possible with a 120 by 60 dpi capability and the options of 4K or 16K edit buffers are available with both KSR and MSR versions.

Teleprinter Equipment (CW), Akeman Street, Tring, Herts. Tel: (044282) 4011.

The upgraded Victor portable terminal.

Link-up to Wordnet

WORDNET International has added the Rank Xerox 600 Series of electronic typewriters to its office networking system, the WordNet 2000.

WordNet is now able to link most models of the Rank Xerox range into the 2000 office linking system, which enables each typewriter to act as an input terminal to a word processor. The data is sent to the WordNet CPU as each page is finished.

Up to eight electronic typewriters can be linked into the system including those from Olivetti, IBM, Triumph, Adler and Olympia.

The Rank Xerox 600 Series incorporates automatic correction, carrier return, emboldening, underlining and character memory. WordNet International (CW), Tel: 01-630 5351.

Streamline connection

THE Jaguar Streamline is a device enabling computers to connect to the new telex lines now being provided by British Telecom. It takes Ascii asynchronous instructions from a computer port or terminal and automatically connects to the requested remote telex location.

The user dumps the complete text of his message into the large buffer in the Streamline which performs all code and speed conversion on behalf of the user, says Jaguar.

Typical uses of the Streamline are the connection of minicomputer ports to the telex network and the provision of a telex gateway for an asynchronous terminal network.

Jaguar Communications (CW), Elton House, London Road, St Albans, Herts AL1 1LJ. Tel: (0727) 32293.

Introduction to the Microcomputer, Merit Computers course, Stanneylands Hotel, Wilmslow, Cheshire, £95. Further details from Karen Blackshaw on (0942) 495821.

Record Handling Management, Polytechnic of the South Bank course, £55.

■ Network Systems Corporation has named Tony Gray as Northern European sales manager. His territory includes the UK, Scandinavia and the Benelux countries. Gray joined Network Systems from Data General.

■ Peter Bedells has been appointed sales and marketing manager of Sherwood Computer Centre, Romford. He joins following six years with ICL as account manager specialising in the insurance field, including the Lloyd's market.

■ Cybernex has appointed Bruce R. Fox as director of international marketing. His previous marketing experience includes appointments with the Bell Telephone Co. and Gandalf Communications. Cybernex UK subsidiary, Brent-Cybernex, names Colin Perry as area sales manager.

■ Package Programs has appointed Jane Rowland as a client support consultant and Mike Hardman as a sales executive in its Asset Management Systems Division. Rowland has spent the last six years with Datamation Systems in the United Arab Emirates, where latterly she was special projects manager responsible for setting up agencies and training courses at the National Computing Training Centre. Hardman has been in the US for three years, selling software packages for the defence and aerospace industries.

■ Brian Cannon (right), Ian Goodman (centre) and Michael F. Jordan (left) have been appointed directors of Southwork Computer Services. Cannon is head of the software group; Goodman is responsible for systems analysis and programming; and Jordan is responsible for the company's data centre. The new directors join Nigel May, chairman; David Haynes and Colin Clayton on the board.

■ Sheaffer has appointed Bob Fitzgibbon as MIS manager. He will be responsible for the data processing department, and actively involved in the general development of information management and systems development.

■ Chris Robinson has been appointed UK sales manager for Systems International Microsystems. He was previously dealer manager for Viasak Computer Systems and most recently dealer account manager with Peachtree International.

■ Psion, a UK microcomputer software company, has appointed Matthew Gaved, to head a new sales and marketing department. He joins from The London Tobacco Company.

■ Bull Peripherals UK has appointed a new technical support manager, John Hughes. His technical experience in high technology stems from 25 years in the Royal Navy as an electronics engineer, as an instructor training engineers at DEC and as training manager at Systime.

■ David Taylor (below) has joined Vicon Industries UK as managing director, with overall responsibility for Vicon's UK and European operations. He was previously UK sales director of Zenith Data Systems of Chicago.

PEOPLE

■ Two new management appointments are announced by BIS Software to co-ordinate the development and launch of new systems. As planning manager, Don Urquhart (left) will be responsible for the company's technical and market research and for planning and prioritising new products, as well as enhancements to current products. He has been with BIS for nine years, and previously worked for ICL and Sperry Univac. John Willis (right) becomes product marketing manager for BIS Software. He spent 15 years in banking before joining BIS in 1977, and was formerly general manager of BIS's Luxembourg offices.

■ Aim has announced a number of appointments to its board. Clive Telfer, chief executive, also becomes chairman, while three senior managers have been named as directors: Michael Booth, currently company secretary; David Hewitt, general manager, professional systems division; and Keith Taylor, general manager, bureau services and supplies. Telfer spent six years with ICL (now ICL) before joining Aim in 1966 as computer services manager. Booth joined

Aim in July 1977 as company accountant, having previously been employed for 10 years in a private accountancy practice. Hewitt joined Aim in 1968 as a trainee programmer, and was appointed sales and marketing manager of Aim Professional Systems Division in 1978, becoming general manager of the division in 1980. Taylor has more than 15 years' experience of the management and operation of large ICL mainframe computer installations.

■ The Computer Trade Association has voted Rod Cousens Person of the Year for 1983. He received the award primarily for his work in promoting the UK software industry as vice-chairman of the Guild of Software Houses (GOSH). Cousens is managing director of Quicksilver, whose games have consistently featured in the top ten best-sellers.

■ David Woodley (below) has been appointed managing director of Systematics International, a company in the Systematics International Group. He has 14 years' experience in the industry, is a former technical director with DDP of Basildon, Essex, and moved into the microcomputer field in 1980 as director of Compuskill.

■ Dick Osborne has been appointed product manager, personnel systems, within the human resources division of Package Programs. He joined PPL in 1980 as support manager for the company's payroll and personnel systems, later being promoted to education and consultancy manager.

■ Robert Morgan has joined Peachtree Software International as production assistant, responsible for producing software sold to dealers, agents and licensees, and for the software library. He comes from Newcastle University. As a Peachtree account manager Yusuf Hassan will be responsible for supporting and developing Peachtree's dealer network in the South. He was previously responsible for the sale of software for Wang machines from 1982. Mick Gould, who has been appointed Peachtree dealer sales manager, is himself an ex-dealer. Michael Dwyne has been appointed support consultant with responsibility for supporting licensee accounts, Peachtree dealers and end users. He was previously with Padmede Computer Services.

■ Keith Rolfe has joined Harlow-based multiline component distributor VSI Electronics (UK) as sales office manager. He previously held purchasing, sales and marketing positions within STC Electronic Services.

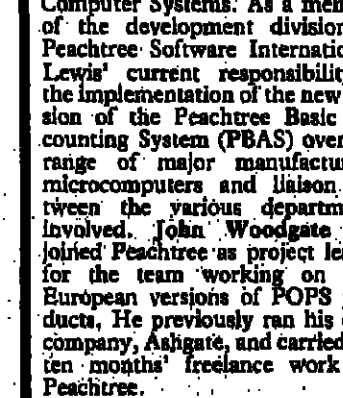

■ Control Data announces the appointment of Graham Thorne (above) as director of communications. Thorne joined The De La Rue Company in 1954, then spent eight months in Paris with Compagnie des Machines Bull, one of the five founder members of De La Rue Bull Machines which subsequently began operations in London. When De La Rue Bull became part of the computer interests of General Electric Company (US), Thorne became manager of marketing communications for GLIS where he was concerned with the inauguration of the first major time-sharing service in the UK. He subsequently spent 13 years with Honeywell Information Systems where he became director of communications.

■ Three appointments have been announced at the Rhyl factory of Pilkington Fibre-optic Technologies. Robin McEwen-King, formerly general manager, becomes managing director; Julian Watts becomes technical director from technical manager; and Colin Briody becomes works manager from production manager.

■ Brian Lynch, has joined BIS Applied Systems as a training development consultant with responsibility for EC3 and South-east London, Surrey, Hampshire and East and West Sussex. In 1972 he joined a UK-based international training organisation as an instructor for all types of data input equipment.

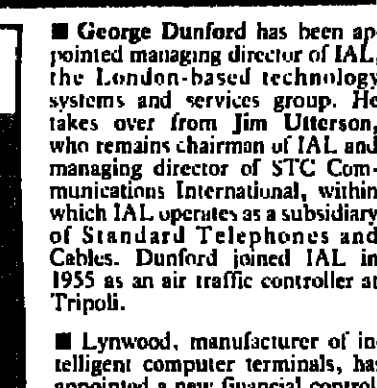

■ Phil Lewis (above) joins Peachtree as a projects manager with over four years' experience in project management for Rediffusion Central Services and Marcol Computer Systems. As a member of the development division of Peachtree Software International, Lewis' current responsibility is the implementation of the new version of the Peachtree Basic Accounting System (PBAS) over the range of major manufacturers' microcomputers and liaison between the various departments involved. John Woodgate has joined Peachtree as project leader for the team working on new European versions of POPS products. He previously ran his own company, Ashgate, and carried out ten months' freelance work for Peachtree.

CONFERENCES

■ A SHORT course on computer ergonomics for designers, managers and users of computer systems is being organised by Tom Mayfield of HUSAT at Loughborough University of Technology. The course, Human Aspects of Computer Systems, is geared to commercial applications of computers and will run from April 8-13. It covers such topics as visual display and keyboard design, the computer environment, job design, user involvement and supports, system evaluation and trade union issues. Further enquiries to Tom Mayfield or Mandy Marshall, Department of Human Sciences on (0509) 212041.

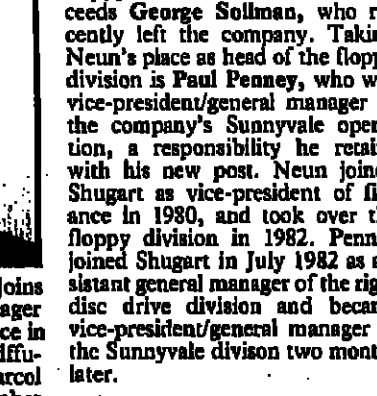

■ George Dunford has been appointed managing director of IAL, the London-based technology systems and services group. He takes over from Jim Uttersson, who remains chairman of IAL and managing director of STC Communications International, within which IAL operates as a subsidiary of Standard Telephones and Cables. Dunford joined IAL in 1955 as an air traffic controller at Tripoli.

■ Lynwood, manufacturer of intelligent computer terminals, has appointed a new financial controller. He is Bill Coultas Donald, from Horne Brothers, the high street outfitters, where he was financial director. A Scottish chartered accountant, he previously worked for London Weekend Television and Rio Tinto Zinc.

■ David Markby is now deputy managing director of CSC UK (Computer Sciences Co). He joins after nearly 14 years with Leasco Software where he was managing director for the past three-and-a-half years.

■ Carl Neun (below) has been named vice-president and general manager of Shugart Corporation marketing and sales division. Previously he was vice-president and general manager of Shugart's floppy disc drive division. He succeeds George Sollman, who recently left the company. Taking Neun's place as head of the floppy division is Paul Penney, who was vice-president/general manager of the company's Sunnyvale operation, a responsibility he retains with his new post. Neun joined Shugart as vice-president of finance in 1980, and took over the floppy division in 1982. Penney joined Shugart in July 1982 as assistant general manager of the rigid disc drive division and became vice-president/general manager of the Sunnyvale division two months later.

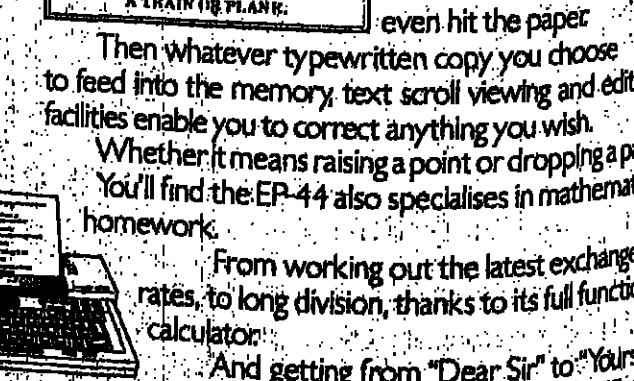

The Brother EP-44 Portable Electronic. Amazing but true.

Prepare yourself, dear reader, for an encounter with the extraordinary. For an alert mind is needed to grasp the full potential of the invention above. The Brother EP-44. A technological masterpiece which is about the size of a telephone directory. Yet which encompasses an entire range of office electronic equipment. Electronic writer... computer terminal... computer printer... calculator... even telex machine. On first inspection, the QWERTY keyboard seems disarmingly familiar. (Until you discover the host of international symbols also available.)

A simple code sequence, and you have the capacity to review and update up to 4000 separate characters in the EP-44's memory. Take a quick look at the LCD panel. Every character pops up on this screen as you type. You can correct up to 15 of them before they even hit the paper. Then whatever typewritten copy you choose to feed into the memory, text scroll viewing and editing facilities enable you to correct anything you wish. Whether it means raising a point or dropping a paragraph. You'll find the EP-44 also specialises in mathematics homework. From working out the latest exchange rates, to long division, thanks to its full function calculator. And getting from "Dear Sir" to "Yours faithfully" comes automatically to the EP-44.

As do paper insert, carrier return, centring, right margin flush and underlining. Being a child of the computer age, the Brother EP-44 wouldn't be complete without an RS-232C interface. Thus connected to your home computer, the EP-44 will reel off computer command lists simultaneously as you type them on screen. And, you'll be reassured to know, they'll be printed on presentable A4 sheets.

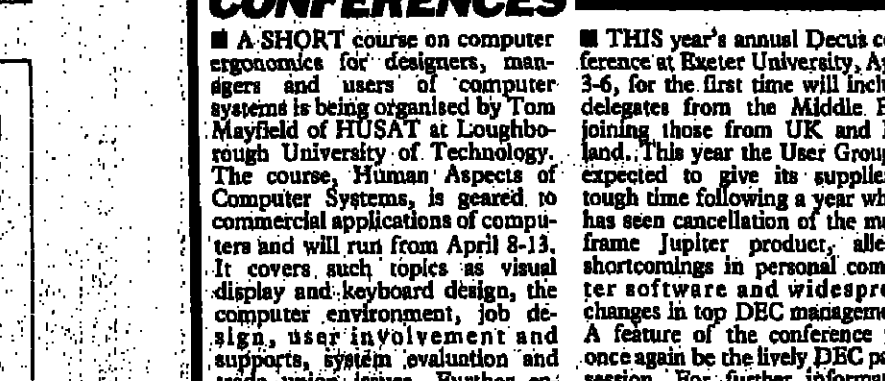

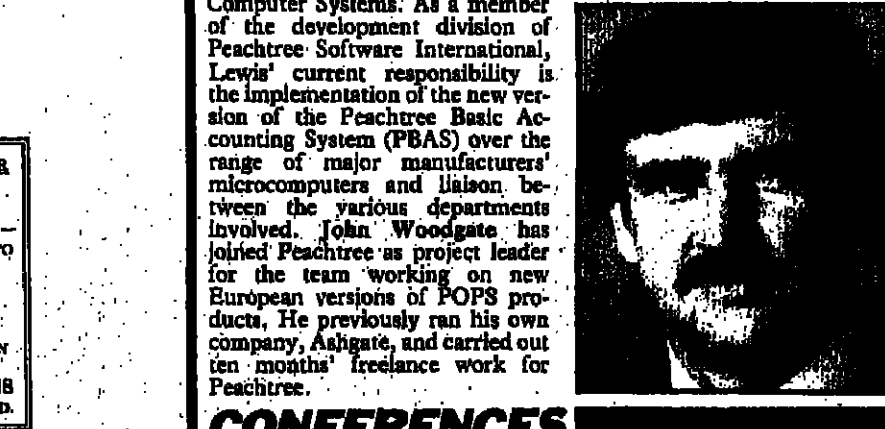

Not the 'bus ticket' type rolls that have become annoyingly common on inferior printers. But perhaps the most ingenious of the EP-44's myriad features is its capacity to send messages through space. With the help of the humble telephone. Link it to a receiver via an acoustic coupler and it will send your typewritten message to a similarly linked printer or Brother EP-44 anywhere in the world. By way of satellite, land line or cable. An alternative, no less. Enabling you to type in Bradford, on paper in Bangkok. 'EP phone home' indeed.

How the EP-44 replaces brain cells. The EP-44 gives you back parts of the brain that would otherwise be employed working out percentages, the hard way, remembering date formats, rectifying typewritten errors on paper, etc.

But the EP-44 is not confined to extra-terrestrial activities. It will become an indispensable asset for anyone who communicates by the written word. Inter-city or inter-office. As you would expect, the EP-44 goes one better in the character reproduction stakes too. Its 24x18 dot matrix head provides it with an exceptionally improved print definition. Remarkably, every function, feature and facility is squeezed into a slim 13"x10.3"x2.2".

But perhaps the most remarkable thing about the EP-44 is its starting price - £24995 (inc. VAT). Too good to be true!

PRODUCTS

Tracer for the BBC Micro

RD LABORATORIES has entered the field of graphics devices for the BBC Micro.

The Tracer consists of two pivoted tracing arms, with connections for immediate use with the BBC Micro Model B.

Robustness is a first requisite of the hardware, says Chris Marshall of RD. The product must withstand constant use by schoolchildren, and it is important for users to copy from atlases and thick text books.

The RD graphics device can do that, he claims.

The tracer uses high grade potentiometers, giving accurate reproduction over an A3 (420 x 300mm) tracing area. Most users have their own drawing surface, so a base-board is not included as standard.

The software is provided on cassette as standard, but disc-compatible software (on cassette) is available on request. This can be used in all the BBC colour modes, including Teletext, with a quick colour selection routine.

The basic drawing routines

The RD Digital Tracer for the BBC Micro.

include thin and emphasised lines, with dotted line options. Another gives straight line joins between input points.

There is a series of geometrical constructions, vertical and horizontal straight lines, circles,

rectangles and angles, which can be sampled and moved before entering. Text can also be sampled and moved before entry, so bar charts or pie-charts can be made up in seconds.

A selection of rub-out options is

available, from screen-clear to deletion at a small point. The display can be saved on cassette (or disc).

RD Laboratories (CW), 20 Court Road Estate, Cwmbran, Gwent, Tel: (06333) 74333.

Bus controller adds dedicated power to data acquisition

THE facility to add dedicated computing power to a range of data acquisition, recording and analysis instrumentation is possible with a new bus controller system from Thorn EMI Datatech.

The Type SE2650, is a microcomputer-based system designed to control the functions of any IEEE-488 instrument. It is housed in a single, desk-top VDU unit incorporating twin 5¼in floppy disc drives, with a detachable alphanumeric keyboard.

The SE2650 is both software and hardware compatible with the Apple computer and can capitalise on a variety of interfaces.

The bus controller can be configured to drive a single instrument where fast data transfer and computation may be of prime importance, or in a multiple instrument configuration where complex measuring procedures and mass data storage is required, says Thorn EMI Datatech. This flexibility makes the controller suitable for use in the laboratory, in a production line ATE environment and in process control or research applications.

The system has 18 Kbytes of RAM for program generation and data storage, and the two floppy disc drives provide 320 Kbytes of permanent storage capacity. A fully configurable RS232C interface, a Centronics interface and IEEE interface are provided as standard.

The full alphanumeric keyboard incorporates edit keys. The standard Type SE2650 system supports the Apple DOS 3.3 operating system, which runs the various versions of Apple Basic.

A special Applesoft compatible Basic called Busbasic, developed specifically for the controller is also provided as standard. Features include a serial or parallel port configuration.

Pascal, Fortran and Pictura are also available and special bus commands have been added to enhance each of these languages. The CP/M software operating system is an option. Thorn EMI Datatech also undertakes to generate application software to meet particular requirements.

Thorn EMI Datatech (CW), Spur Road, Feltham, Middlesex TW14 0TD. Tel: 01-890 1477.

The Type SE2650 bus controller system.

Graphics for commodity traders

A GRAPHICS system designed for use by commodity traders has been launched by Mintec. Called Comtec, it is a charting system which can present on a colour display terminal price histories of any range of commodities or stocks, the differences or ratios between commodities, draw trend lines, and apply analytical graphic techniques such as moving averages, momentum indices, and arbitrage comparisons.

It also employs specialist techniques to produce point-of-figure charting and interactive line drawing. Mintec says variations of the system will be available to cater for other specific groups such as stockbrokers, financial analysts, and economists.

The system combines a DES171 Taskmaster desk-top micro from Diplot Electronics, with a Tektronix 4105 display terminal, and Mintec software.

The full system package, including hardware kit and software programs, sells for roughly about £20,000.

Mintec (CW), 16 High Street, Windsor, Berks SL4 1LD. Tel: (07535) 4422.

Harris signs software agreement

HARRIS Systems has signed an agreement with Execucom Systems of Austin, Texas, to market and support Execucom decision-support software products.

The packages to be marketed immediately by Harris include IFPS (Interactive Financial Planning System), a general purpose, high-level language financial modelling system which provides the ability to perform "what if" simulations, optimisation sensitivity analysis, report writing, consolidations, and trend analysis; IFPS/Graphs, an integrated business graphics system; IFPS/Century, a data entry and validation system, and IFPS/Dataspun, a facility for transferring and formatting data.

The agreement also covers IFPS/Info Interface, which is an interface into the Hanco data management system; IFPS/SCSS Interface, an interface into the SPSS conversational statistical package; IFPS/Personal, the integrated micro version of IFPS, and IFPS/QL, an interface into general ledger packages.

Harris Systems (CW), Farnham Road, Slough SL1 4XD. Tel: (0753) 34666.

SYSTEMS ANALYSTS

NORTH WEST

Salaries to £16,000

We have been asked to assist with the recruitment of a number of talented systems analysts with varying levels of experience covering a wide range of disciplines. The successful applicants will work on the development of either technical or commercial systems in a progressive environment providing a high degree of job interest coupled with excellent prospects for further advancement.

You should have a minimum of four years D.P. Experience including at least eighteen months design or analysis. A scientific background would be an added benefit for the technical positions. Salaries are in the range of £8,000 to £16,000 depending on experience and ability. Excellent fringe benefits include re-location assistance where appropriate. To arrange an early interview telephone Philip Gilchrist today or write with a detailed C.V.

WEST SUSSEX COUNTY COUNCIL

SUPPLY OF IBM DISC DRIVE
Notice is hereby given that the West Sussex
County Council wish to receive tenders for the
supply and installation of a new IBM 3380 Model
A44 disk drive. The appropriate tender forms,
together with copies of the Conditions of Contract
and a Specification may be obtained on application
to the Head of Computing Services, County
Treasury Department, County Hall, Chichester,
West Sussex, Chichester T11 0JL or by post to
the same address, Chichester T11 0JL.

The County Council do not bind themselves to
accept the lowest or any tender received. All
tenders should be submitted on the above-
mentioned Tender Form, and should be delivered
to the County Secretary of the West Sussex
County Council at County Hall, Chichester, West
Sussex, in a plain envelope or package on or
before 12 noon on 06 April 1984. Nothing should
appear on the outside of the envelope which
would indicate the name of the tenderer.

We are retaining a number of adults in

MICRO-ELECTRONICS APPLICATIONS
(the course includes Digital Electronics, Programming and Interfacing)

If you are a firm in the London area considering employing trainee technicians in Micro-
Computing, why not consider taking, at no cost, one of our courses for a period for
experience.

Develop your career in America

Project Managers • Project Leaders

More than simply one of the largest and most successful software consultancies in the USA, our client makes it their business to match unequalled expertise with a variety of DP projects. From design to implementation, they achieve success after success, in the face of tough EDP problems. The tougher the EDP problem, the more definitive their solutions.

Isn't that the sort of consultancy you'd like to be associated with? A 'consultant's consultancy' in every way. Working with an impressive list of 'blue-chip' companies and major government agencies in a wide spectrum of diversified project areas. Superb in-house training keeps you one step ahead of accelerating

to \$50,000 pa

technology in an environment which demands the highest level of ability.

Our client is currently seeking DP professionals to undertake long-term projects based in the North Eastern/Southern parts of the USA.

Degree level DP professionals possessing excellent communication skills and 3 or more years' experience in the areas listed below — should look no further!

- MVS, DOS/VSE • CICS, COBOL
- ID/MS • IMS DB/DC, ADF, PL/1, COBOL
- UNIX and C Language (MODEL 204)
- IBM PC, BASIC, LOTUS 1, 2, 3, • FOCUS.

A broad range of applications exist, including material handling, inventory control, utility billing, banking and brokerage.

Salaries will depend on seniority and length of experience, but will be up to \$40,000 (Exchange Rate is \$1.40 = £1), plus a highly comprehensive benefits package which includes profit-sharing, overtime payments, complete insurance coverage, generous expenses and car allowance on assignment. All immigration and travel formalities will be handled by our own experienced staff to ensure a smooth transfer to the USA.

Interested applicants should telephone Ian Marshall on 01-631 4411, or write to Moxon Dolphin & Kerby Ltd., 178-202 Great Portland Street, London W1N 5TB, quoting ref. no: 3128. Interviews will be held locally.

NATIONAL ACCOUNTS MANAGER - MID U.K. (Ref G2/103)

£40,000+ — BASE £25,000

BUPA, STOCK PURCHASE SCHEME, QUALITY CAR, RELOCATION IF NECESSARY

EXPERIENCE - In the area of Major or National Accounts, preferably with one of the industry's Mainframe or Supermini manufacturers.

ROLE - To manage long term Sales relationships with existing National Account Customers. Bonus is directly related to the achievement of pre-defined and agreed objectives centred around the professional 'management' of existing National Account Customers.

CHALLENGE - If you feel you have the experience and business acumen to comfortably liaise with the senior management of the Times Top 50 companies and can assist and advise Major Accounts Salesmen on general strategy, whilst maintaining a permanent 'watching brief' over these accounts, then you may qualify for this position.

CONFIDENTIALITY - Your C.V. is NOT required at this stage, but your Name and Home Telephone number are. Our Managing Director will call you out of office hours for an initial brief discussion which guarantees confidentiality. This position is both an opportunity and a challenge so respond to it!!

COMPUTER SYSTEMS SALES EXECUTIVES — MIDLANDS, NE & NW ENGLAND (Ref G2/104)

OTE £28,000 BASIC to £14,000.

THE COMPANY - A new Major Force in the Information Technology Marketplace, formed by the amalgamation of 3 Outstandingly successful subsidiaries in the fields of Distributed Data Processing, Communications, Office Automation and Word Processing. Run by positive thinking Managers who have been brought in because of their proven success in this business area. Their aggression, drive and determination are directed at the market place and objectives are realised by fully supporting the salesman.

EXPERIENCE - Selling Computer Systems to Major Commercial Companies, with emphasis on the very latest techniques in Communications & Office Automation.

THE REWARDS - Job Satisfaction plus High Basic and realistic on target earnings, with all the usual big company benefits for successful Salesmen, particularly those with knowledge of the IBM market place. Seldom does the opportunity arise to work for an internationally known company which has consolidated the successes of its subsidiaries and yet provides ground floor opportunities, so take it!

Operations Manager International Banking

The City

£18 — 20,000
+ Mortgage

Our Client

is the Treasury Division of a major international bank embarking on further, extensive computerisation of their dealing operations, to take them to the forefront of technology in this area.

The Role

This key position will involve installation, planning and implementation of the new systems, conversion of existing batch and on line systems and day to day management of operations in the new computer centre.

Candidates

Will have broad operations management skills in a medium sized IBM or DEC environment. Experience of a similar start-up situation involving installation planning will be highly attractive. You should naturally have sound man management skills.

Benefits

As well as salary and subsidised mortgage, there is a highly attractive package embracing all the usual banking benefits.

Technical Support Manager — Pre and Post Sales

Large Scale Datacomms/Distributed Data
Processing/Office Automation Projects

Central London

If you are currently working for a terminals supplier, a systems house specialising in data communications systems design and implementation, a data communications specialist company, or a large data communications networks user organisation we believe we can offer more personal and career benefits than you are, currently enjoying.

As a recently formed division of a massive UK blue chip company dedicated to information technology, we have the financial backing required to ensure ongoing rapid growth. Since our formation 2 years ago we have achieved a highly profitable revenue which will exceed £30M by April 1984.

We are now involved at the start of a major revolution in another specific industry sector, where as a result of our unique knowledge and resources we have been awarded an ongoing contract for the implementation of large scale data communications networks and associated distributed data processing/office automation computing.

Because we are a new division your skills will be crucial in enabling us to honour our commitments. Therefore as a primary source of expertise you will be able to influence the direction and success of the projects, and have first option when considering personal advancement within our rapidly growing organisation.

Circa. £20,000 plus quality car

You will have at least 5 years experience of activities which should include: design, development and implementation of data communications systems and networks; design and implementation of interactive terminal systems; selection/specification of associated items such as: processors, printers, terminals, modems, multiplexors, interface modules; training of end user personnel. This will have lead to a good knowledge of communications protocols, circuit standards and operations, front end user processor systems and their operation, TP monitors; modems — principles and operation.

You will assist the staff in identifying opportunities in qualified customer environments and quantify and qualify in technical terms in accordance with our product range/philosophies and assist in finalising contracts. You will lead a small but growing team of highly experienced sales support consultants and therefore you should be fully conversant with sales situations and the general conduct and behaviour required in them. You should also be free and willing to travel extensively.

To make a discreet enquiry please telephone Ian Goldsmith on 01 935 0671 during office hours; or 01 935 7132 evenings and weekends. Alternatively submit a comprehensive career résumé to our London office.

SENIOR APPOINTMENTS - £14K +

MSA
The Software Company

SALES SUPPORT CONSULTANTS

c.£17,000 + CAR
MAIDENHEAD, BERKS

MSA, the world's leading supplier of packaged application software, is expanding its activities internationally and is looking for high calibre sales support staff. Opportunities exist for Sales Support Consultants in the UK, Scandinavia and in the agent operation which is based in the UK.

The ideal applicants will meet most of the following requirements:

- ★ Experience in mainframe financial application software, either as an accountant or as a systems analyst, involved in the usage and/or design of financial software or

Experience of IBM systems software, specifically database management systems and data communications systems

- ★ Proven communication and presentation skills
- ★ Familiarity with the operation of a marketing and sales organisation

Fluency in French, Italian, Arabic or one of the Nordic languages would be useful but is not essential. The positions will provide opportunities for travel and will include extensive training, a quality car, BUPA, bonus plan and a first-class pension scheme.

Please contact MARK IRENS for further information

CONSULTANCY LONDON

£14,000-£22,000 + CAR

A leading international management consultancy has openings for top calibre D.P. professionals who have either excellent all-round commercial applications experience, or specialised experience in areas such as communications, database, etc.

You will need to meet all the following requirements:

- Good degree
- Excellent inter-personal skills and professional manner
- 25-32 years old
- Proven track record, either in a variety of application areas or in specialised areas as above

You will mainly be involved in pure consultancy, but also in project implementation and management.

This is seen as a logical career step for high-fliers who have proved themselves in a user environment and are ready to move forward to top-class consultancy.

For further information, please contact MARK IRENS quoting reference CW 2203/2.

NATIONAL SALES MANAGER

COMMERCIAL OEMs
32 BIT SUPERMINIS
BASIC TO £30,000 AND PRESTIGE CAR
EXECUTIVE PACKAGE, INCLUDING BONUSES

Our client is one of the world's largest computer manufacturers. They are about to launch a US manufactured state-of-the-art supermini in Europe, and are seeking a suitably qualified Sales Manager to set up and run the sales and marketing of this product in the UK.

Corporate policy dictates that it will be sold through OEMs and into vertical commercial markets. Applicants must therefore have profound experience of:

- ★ 32 bit machines and operating software
 - ★ Sales, marketing or general management
 - ★ Commercial OEM markets
- It is possible that the successful applicant will have worked for or is currently working with an important 32 bit manufacturer already established in the OEM marketplace; DEC, Data General, Prime or Hewlett Packard for example.

SPECIALIST RECRUITMENT CONSULTANTS

JEDDAH

Airline D.P. Professionals for major development projects

up to £27,000 pa tax free
with exceptional
family benefits package

Saudia is now the twelfth largest IATA passenger carrier in the world and employs computers on a vast scale. In 12 cities and 8 countries our data networks link more than 1,000 computer terminals processing nearly 100,000 transactions daily and are used by more than 2,000 employees in their work.

Even greater expansion of our Data Services Department is underway and we now wish to strengthen our team of computer professionals at our purpose-built data and communications centre in Jeddah. This modern operation supports a large IMS and CICS-based online operation, running on Dual IBM 3033 miniframes under MVS/SP1.3 with JES2, with JES3 currently under development.

PROJECT MANAGERS
ACP Passenger Service Systems
Range £22k-£27k Max £12.5k

Saudia is currently planning to install for live operation in 1985 the following in-house automated systems operating under ACP:

- ★ International Reservations
- ★ Departure Control
- ★ Automated Ticketing/Fare Quotation

We are looking for people with proven experience in systems installation and development in one of these ACP areas or in ACP Operations or ACP Real-Time Coverage/Support. You must have extensive experience in a large scale IBM online environment and ideally have a relevant degree though this is not essential.

SENIOR SYSTEMS ANALYSTS & SYSTEMS ANALYSTS
ACP Passenger Service Systems
Range £18k-£25k Max £29.5k

To support these Project Managers, we are looking for people with less but substantial systems development and installation experience in these same areas.

In addition we require similar people for other areas each of which have their own specialities:

★ **Finance & Administration Systems**
You should have experience in systems analysis/design using structured techniques preferably YOURDON. A background in COBOL/CICS/VSAM is essential. Applications include: Personnel Administration, Revenue Accounting, Accounts Payable, Accounts Receivable, Statistics.

★ **Materials Management & Technical Services**
You should have experience in systems analysis, design and programming for online and batch applications, preferably inventory and aircraft maintenance systems with at least three years in IMS DB/DC, PLI, SPF and utilities.

★ **Flight Operations Systems**
The Flight Operations Information System (FOIS) scheduled for installation this year is the most comprehensive in the airline industry, utilising structured COBOL programmes using CICS and the TOTAL Data Base. Relevant experience in these areas is essential. Applications include: Crew Administration, Crew Management, Operational Control and Flight Planning.

ACP SUPPORT & MAINTENANCE SPECIALISTS
Range £17.5k-£25k Max £29.5k

We also require experienced ACP Systems Programmers, real-time coverage and operations personnel, including ACP Console Operators and staff experienced in ACP systems maintenance and support functions.

SOFTWARE SYSTEMS PROGRAMMERS
Range £18k-£25k Max £29.5k

We need people to be responsible for maintaining the software system at the highest possible level. Major online systems under IMS and CICS are planned to be cut-over late in 1984.

Systems Programmers working in this stimulating environment must have several years' experience which must include generation, maintenance, problem determination and administration in any of the following areas:

- ★ The Control Programme Software Support Group has responsibility for MVS/SP, JES2 and all programme products.
- ★ The Network Software Support Group has responsibility for NCP, VTAM, NPDA, NCCF and TSO.
- ★ The Data Base Software Support Group has responsibility for IMS and CICS.

In each group performance and monitoring tools are available and experience of using these tools would be an asset.

DATA BASE ANALYSTS
Range £18k-£25k Max £29.5k

The people we are seeking for the support and maintenance functions must have proven skills in Database Design and Administration as well as experience with either DBMS, IMS or TOTAL.

You should have substantial experience in the area of Database Administration including several of the following areas: evaluation of new technology, design and implementation of databases, establishing standards and procedures, use and maintenance of DBMS software, data dictionary, problem determination and correction, tuning and data security.

WE OFFER A HIGHLY ATTRACTIVE BENEFITS PACKAGE WHICH INCLUDES:

- ★ Free furnished villa or apartment in an attractive residential area
- ★ Superb recreation facilities with swimming pools, tennis courts and sports club
- ★ Subsidised schooling for children up to the age of 11
- ★ Free flights for you and your family to the UK with the opportunity for several home visits each year
- ★ Worldwide reduced rate air travel
- ★ Merit bonus - performance related
- ★ Contract completion bonus

These positions are open to men aged up to 55 on a 2 year renewable contract basis. Salaries are paid locally in Saudi Riyals (currently SR15.2=£1) with no local income tax. Starting salaries will be in the ranges shown, subject to qualifications and experience. The scale maximum is shown for your information.

For informal discussion please call Peter Stevenson or Martin Kelly on 01-005 7755 ext. 138 or write with full c.v. to: Area Personnel Manager, Saudia Arabian Airlines, 508 Chiswick High Road, London W4 3RG.

FINANCIAL & RETAIL SYSTEMS SALES

LONDON OR MANCHESTER EUROPE'S NO. 1 D.P. COMPANY

"A TRULY ASTONISHING RECORD OF SUCCESS OVER THE LAST FIVE YEARS IN SELLING SYSTEMS TO SOME OF THE BIGGEST FINANCIAL AND RETAIL INSTITUTIONS IN THE COUNTRY"

75 years of innovation have earned our client an outstanding reputation across the whole spectrum of Information and Data Processing, and they are now recognised as one of the world's leading suppliers. Turnover in the UK has now exceeded £80 million per annum, and includes several individual multi-million pound orders. Indeed, any large financial or retail organisation looking at automation would almost certainly ask our clients to quote.

Their determination to be the most important supplier of Branch Terminal Networks to the country's largest financial and retail organisations has created vacancies within their Major Accounts Division. Two categories of Sales Executive are sought:

SENIOR ACCOUNT MANAGERS

**BASIC £15K + OTE £30K +
GUARANTEED £20K + & CAR**

Applicants to these positions will immediately identify with the whole ethos of selling large distributed systems into financial and retail markets. Leaders in the field include BURROUGHS, NCR, OLIVETTI, NIXDORF, ERICSSON, PHILIPS and IBM, and it is probable the ideal candidate has worked for one or more of them. A successful sales track record at the highest level and over several years is mandatory.

To you, our clients offer the opportunity to join arguably the most important supplier in these market areas and to earn extremely well while progressing on an excellent career path.

TRAINEE ACCOUNT EXECUTIVES

**BASIC £12K OTE c.£24K
GUARANTEED £17K & CAR**

Our clients are also very keen to "grow their own" Senior Account Management.

They would be interested in talking to young executives with the right personal qualities, currently working for large Building Societies, Banks, Insurance Companies or Retail Groups. They would probably be employed within their company's Management Services or O&M areas, and have a very sound understanding of their particular businesses.

Our clients offer you the opportunity to move into the highly lucrative area of computer sales and to receive comprehensive training second to none in the industry.

Contact BOB BOWER who is advising on these superb positions.

COMMERCIAL TURNKEYS**

**BASIC £20,000 & CAR
NEGOTIABLE GUARANTEE
CENTRAL LONDON**

Our Clients are a fast expanding and highly profitable micro and P.C. OEM supplying commercial turnkey systems.

An excellent growth record and high profitability have attracted venture capital investment which enables the company to expand rapidly.

To help them do this, they require a Sales Director who is experienced in the market place and can substantiate a record of successful management and business development.

This is a superb opportunity for the entrepreneur to grow with an organisation determined to become number one in the supply of turnkey business systems based on new and advanced microcomputer technology.

PROFESSIONAL SERVICES

SENIOR SALES ROLES

**BASIC £19,000
OTE £30,000
CAR & GUARANTEE
LONDON & BIRMINGHAM**

Computer systems are increasing in complexity and in the variety of solutions available. The expertise required to advise on D.P. systems is therefore equally demanding, and our clients offer a comprehensive range of professional and consultancy services to help meet the ever increasing demand for professional advice.

With an excellent reputation built up over the past 15 years, they are now seeking experienced Professional Services Sales Consultants to help them continue to profitably expand the company.

We welcome applications from Senior Sales personnel with specific technical or commercial experience. A sound knowledge of the systems capability of IBM and/or major minicomputer systems manufacturers would be of particular interest.

**HARDWARE SOFTWARE
CONSULTANCY**

The majority of recruitment work carried out at Huttons falls into the "search" category. Broadly speaking, this involves us in specific retained recruitment assignments for a number of prestigious clients.

These positions are rarely advertised since, after a decade of recruitment experience in the industry, we are quickly able to identify the correct environment in which to search, and the right people with whom to talk.

We may well have already talked to you, but if not, would welcome an opportunity of doing so to discuss the many assignments on which we are currently working.

Please contact BOB BOWER for an informal discussion.

Senior Analyst Programmers Analyst Programmers/Programmers to c. £11,500

We are undertaking extensive development work in our database and systems area and need experienced development staff to join our highly professional teams. The work includes developing many new company systems to meet future business needs.

Candidates ideally will be graduates or educated at least to A Level. Experience in PLI, MVS, TOTAL, CICS or MANTIS will be an advantage, although training is available to broaden your knowledge.

As part of a major group, our attractive benefits package includes relocation help.

GOING SOLO....?

We are a rapidly developing Service Company providing support to Major Clients throughout the U.K. The Company is committed to continued growth of its computer facility and this is supported from Group level in Canada. Upgrading of our IBM 4331 is expected shortly and systems development, underway and planned for the future, is extensive and covers all aspects of the Company's operation.

Systems Programmer to £9000

We seek a young enthusiastic Systems Programmer who is able to contribute at least one years experience of DOS/VSE along with exposure to a variety of DOS and CMS based products, ideally POWER, SORT, VSAM, XEDIT, EXEC2, etc. We are committed to extensive training where appropriate, to include CICS, PLI, DLI, etc.

The appointed person will take full responsibility for support of the system and will report directly to Management. We anticipate that this opening will appeal to an ambitious and self-confident individual who can react promptly to an ever changing challenge. A contribution to future development of the system will be expected.

Our team works in an open friendly environment in close contact with Users and Management. The package that we offer is typical of an Organisation of our standing, including 33 days holiday and regular reviews.

To break out and take this solo opportunity, speak with our advising Consultant GRAHAM MURPHY on 021 236 3781 (24 hour answering service) or 021 778 2974 (evenings 7pm-9pm).

2020 VISION FOR REAL TIME GRAPHICS

Ramtek has been pushing forward the frontiers of computer graphics since it introduced the industry's first raster scan colour system in 1971. Current applications encompass business graphics, imaging, CAD/CAM, process control, command control, cartography, simulation, scientific, geological and medical imaging.

The new Ramtek 2020 uses the latest advances in VLSI technology and pipe-lined, co-processor architecture to set a new standard for colour graphics display generators - up to 35 times faster than conventional raster scan systems.

Sales Executives

c £25K - BMW 320i

As part of Ramtek's ambitious expansion plan, you will handle a number of established major accounts as well as move into new End User and OEM areas with their recently launched range of ultra-high performance Graphics Display Systems. You will be qualified in a scientific/technical discipline and have a minimum of 5 years' experience in a CAD/CAM market place combined with a proven sales track record.

Ramtek

Senior Customer Engineer

£11.5K + 2 Litre Estate

Ramtek's UK engineering team need a Senior Customer Engineer to head-up their excellent technical support function. With responsibility for the day-to-day and preventative maintenance service throughout the U.K., applicants should be based within 50 miles of Basingstoke (relocation possible). Applications are invited from Computer Engineers with 2/3 years experience of mini/micro (preferably CAD/CAM) systems who would enjoy the rewards of working for a leading company. For more information contact: Mr. J. Williams on 01-637 9511.

MANAGEMENT & EXECUTIVE SELECTION

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

Contracts in America!!!

\$40,000+ per annum

An excellent package is offered and will consist of the following:

- ★ Excellent rates of pay (\$800-\$900 per week)
- ★ Return air fare
- ★ Accommodation assistance
- ★ Car assistance
- ★ Medical Insurance
- ★ Tax and Legal advice
- ★ Support from our U.S. office in Boston

We have been retained by a major company in the United States of America to supply 30 experienced computer programming personnel for 12-month contracts. GST

Computer Systems Limited

MICROPROCESSOR ENGINEERS Software and Hardware CAMBRIDGE

£8000 to £16000 per annum + car and benefits package over £3000.

GST is looking for top-flight designers and engineers with strong experience of microprocessor systems to enhance its microprocessor engineering group based close to Cambridge, a beautiful and historic city and arguably Europe's centre of computing excellence.

GST's microprocessor group is involved in a wide variety of technically challenging projects ranging from consumer software to industrial control systems, and from special purpose hardware to high volume product design and scientific instrumentation.

Applicants with detailed knowledge of at least two microprocessor systems and a thorough grounding in Assembler and hardware design experience or one other high level language will have a distinct advantage.

GST offers a top salary backed by profit sharing and other bonuses, company car, BUPA, permanent health insurance, free life insurance and low cost pension, and also pays the costs of relocation to Cambridge.

To apply please send a full CV to GST's consultant Jenny Dalrymple-Hay (or Ian Murray West) at Dalroth & Partners, 4 Half Moon Street, Mayfair, London W1, or telephone for more information or an application form on 01 493 2947 8 a.m. - 10 p.m. Monday - Friday (Weekends 049 46 4579). Ref 5043.

If your career profile does not exactly suit our requirements please still apply.

Specialists in Technical Support

Operations & Network Support Specialists

The Hambro life for brokers

HAMBRO LIFE wins the title of "main buy recommendation" in the survey of life assurance brokers.

Plenty of life in Hambro

HAMBRO LIFE new business figures, up 24 per cent for 1983, make their shares a buy, according to brokers Messel. They think the company's new financial management package, launched through Dunbar Bank, will be most valuable as a way of approaching the market.

Weinberg explains his role on Fowler inquiry and launches 'po. ANDY WEINBERG, deputy chairman and managing director of Hambro Life, explains his role on the inquiry into the appointment to the position chaired by Social Security Secretary Sir John Gummer.

Programming - with a difference Up to £16,000+car

At Hambro Life we have a challenging view of what a programmer should be doing. We think they should be more than just coders. We believe a strong technical background is essential for the design and development of computer systems.

Systems Consultants - join one of the top 50 companies in the U.K.

Hambro Life is one of the country's leading business success stories - the leading life insurance company and now one of the U.K.'s top 50 companies. We are looking for systems consultants to join our team.

Commissions up 24% at Allied Hambro

NEW BUSINESS of the Allied Hambro Group showed a 24 per cent jump in 1983, thanks to a unit trust sales and a rise in the second half of the year.

However we do not rule out the possibility of selecting ourselves from other backgrounds. In addition to the competitive salary and company car we can offer an attractive benefits package which includes non-contributory pension, profit sharing and bonus, free life cover, BUPA, plus full relocation to this attractive part of the country. Don't miss out on this opportunity - call now for a booklet and no obligation to join.

Where there's growth, there's Hambro Life

Hambro Life Assurance has consistently made the news, achieved ever greater records in the financial sector and with the formation of ALLIED HAMBRO stretched the very horizon of personal finance.

Operating today as part of the Allied Hambro group of companies, Hambro Life is growing on all fronts, and this growth in business is made possible by the integrated computer systems which support our Administration. Our use of technology has, therefore, grown as the Company has grown.

And you don't have to look for the evidence - the expansion of work in D.P. has meant that recently we've been advertising in the computing press for more first-class people to join our Systems and Programming departments.

We can also offer career growth based on pure technical merit, and the contribution made by our Operations & Network Support Specialists has always been recognised and generously rewarded.

In short, if you're not thoroughly appreciated where you are now, you will be at Hambro Life and specifically in the following positions:

NETWORK SUPPORT SPECIALIST up to £13,000

Our Network Support area is looking for another specialist, with experience in Network installation, problem diagnosis and fault fixing. You should also have the ability to explain technical problems to non-technical users.

SENIOR PROJECT ANALYST up to £13,000

This is a senior vacancy in our User Support Group and you should have a detailed knowledge of JCL and be able to demonstrate a proven track record in an IBM operational environment.

OPERATIONS PROJECT ANALYST up to £10,000

This is an excellent opportunity for an experienced JCL writer who has some project work experience in an operational environment.

DEPUTY SHIFT CONTROLLER up to £12,000 (inclusive of shift premium)

Ideally you will currently be a successful shift leader or senior operator within an

IBM installation. We can give you the opportunity to use this experience in taking responsibility for a part of our four shift system.

Experience of MVS/JES and JCL is essential.

Our remuneration package is first class with a non-contributory pension, free Life Cover, BUPA, Profit Sharing and Share Option schemes, together with generous assistance with moving to Wiltshire.

For an explanatory booklet and application form please call Marilyn Adams on Swindon 0793 45344 (24 hour answering service) or return the coupon to her at Hambro Life Assurance plc, Allied Hambro Centre, Swindon, Wilts SN1 1EL.

Please send me your recruitment booklet and application form.

LIFE ASSURANCE • PENSIONS • UNIT TRUSTS • FINANCIAL MANAGEMENT

SYSTEMS AND PROGRAMMING

DATAPoint - UNLIMITED OPPORTUNITIES CITY/BERKS

£10-12,500

My client is a prestigious UK financial services organisation with worldwide links. Due to continued expansion they now require talented analysts/programmers with good Datapoint Database experience for several major interesting development projects. Career progression opportunities are unlimited and if you prefer to specialise in a certain area you will be given the opportunity to do so. People with the skills and ambition to work in this fast growing and challenging environment will be rewarded with an excellent package and first class working conditions. MW/1962

MINI COBOL ESSEX

£10,500

My client, a well-known household name, urgently seeks an "above average" COBOL programmer. They currently utilise IBM/AS400 and are in the middle of upgrading to RPOK. Burroughs experience would certainly be an asset, however the company invite applications from self-motivated individuals with a solid commercial background and a minimum of 18 months' COBOL experience. The work itself involves interesting development plans and enhancements to existing systems. This company also house IBM hardware and as all vacancies are advertised internally the opportunity to train on IBM will be available to you. First class benefits include first time, subsidised restaurant and profit share. MW/4018

IBM COBOL - CICS TRAINING! LONDON

To £13,000

A host of new projects has created the need to set up a new development team within this Central London based firm. It includes IBM AS400, DOS/VSE, VM/CMS with CICS and DL/I. You should have a sound education, a minimum of two years' IBM COBOL, DOS/VSE, and the ability to learn new techniques, retain your analysis skills and get in at the start of planned expansion. Full training can be provided in CICS and DL/I, and benefits include annual bonus, first time and travel loans. CW/4044

These positions are just a brief selection from our extensive database of jobs in London and the South-East. If you cannot see a position advertised for your particular skills, or are considering relocating or a change of hardware, a quick phone call will put you in touch with a consultant specialising in your field. 70% of jobs in this industry are never advertised. Why not let us tell you about some of them? We look forward to hearing from you.

NCR ANALYST/PROGRAMMER LONDON/MIDDX BORDERS

£11,000

My client is a national retailing establishment, and is seeking an analyst/programmer with at least two years' NCR COBOL and database experience to join an exciting development project team. The job will involve extensive user liaison and gives every opportunity to develop your analytical and design skills to the full. A full range of benefits and a structured career path are offered to very ambitious candidates. AW/184

BURROUGHS - LARGE SYSTEMS HERTS

C. £10,000

Based in Central Hertfordshire, this multi-mainframe user is seeking a programmer/analyst to work in a manufacturing/retail environment. If you have a minimum of two years' COBOL on medium to large Burroughs machines and would like to progress a step forward into analysis and user contact, this could be the move for you. Why not call for further details. AW/4118

PROGRAMMER/ANALYST IBM DEVELOPMENT ESSEX

To £10,000

Due to this company's expansion plans for IBM a position has been created for an IBM COBOL programmer/analyst to be involved with the development of financial sales and marketing systems. This is an ideal opportunity for someone who wishes to further their technical experience. An IBM DOS/VSE background is essential and CICS experience would be desirable, however, training can be provided. The company offer an excellent range of benefits including flextime and staff restaurant. GW/2093

HONEYWELL PROGRAMMERS CITY

To £10,000 + mortgage

This prestigious national financial services organisation is seeking to recruit a number of self-motivated individuals to join their expanding department. The company house Honeywell Level 4 machines supporting an extensive network of TDM terminals. As they are looking towards major development plans, they are seeking programmers at all levels, with a minimum of two years' working knowledge of COBOL and/or Screenwriter. They offer in return a competitive salary, mortgage subsidy, travel allowances and an exciting and challenging career opportunity. EW/4411

ICL ME29 PROGRAMMER/ JUNIOR ANALYST MIDDX

C.£8,500

My client, an internationally known household name, now have openings in their small D.P. department for programmers with 18 months' experience of ICL COBOL and a good commercial background. The company also wish to hear from a well educated professional who wishes to move into analysis at a junior level. You should have some exposure to systems, in a business or commercial environment, and preferably a knowledge of programming. The right candidate will be offered excellent long term career prospect. EW/4420

IBM SYSTEM 38 - SENIOR MIDDX/BERKS BORDERS

£14,000

This is an outstanding opportunity to join a team of six as an analyst/programmer working on the development of accounting and engineering applications. The company converted to IBM System 38 about 18 months ago and are looking to expand their team. You should have three years' + D.P. experience with at least 12 months' System 38/PS/10, and some analysis and design skills. You will be coming in at senior level, therefore playing a key role in future plans, utilising the latest technology. Please contact me for details. CW/4419

ANALYST/PROGRAMMER (SENIOR) AND PROGRAMMER HANTS

To £13,000

Two positions available within this dynamic and progressive organisation, fully committed to computerisation. They are developing bespoke software and tailoring packages and forward planning, present a two year work load. The senior post requires four years' + experience, with at least 12 months' solid RPG III, design and analysis skills, and the ability to respond quickly to user needs. The other post is for a programmer with 18 months' Systems 34 or 38 experience, who wishes to move into the user liaison and analysis areas. The company are located close to the railway and is easily accessible from Hampshire, Berkshire and Surrey. GW/4414

IBM - ALL AREAS THE PICK OF THE JOBS! £8-14,000

We have clients throughout London, Essex, Herts, Surrey, Kent, Middle and Hants looking for talented and ambitious programmers, analysts/programmers and systems people with a minimum of 18 months' COBOL, RPG III/IV, PL/I or ASSEMBLER gained in an IBM environment. If you feel that you are not being adequately rewarded, or would like to enhance your skills with on-line of database training, give us a ring and one of our consultants would be pleased to assist. GOGEN

IBM SYSTEM 38 WEST END

To £11,500

My client, an international consumer products group, now has openings in their D.P. department for an experienced Programmer and Analyst/Programmer both with an RPG III background. This is an expanding department therefore the candidates appointed can expect career progression as the main emphasis of the positions will be the implementation of new systems. To discuss these positions further please contact me as soon as possible. GW/4449

PL/I - BERKSHIRE, SURREY LONDON

£8-12,000

Internationally renowned marketing firm on the Midlands/Berkshire borders requires an analyst/programmer with around three years' IBM PL/I experience to take a leading role in their team. They utilise DOS/VSE, CICS and DL/I and you would be developing their main on-line sales and marketing applications. Working with users on a regular basis and writing specs. Benefits include annual bonus. I also have positions in London, Surrey, Midlands and Kent for programmers with 18 months' PL/I, offering excellent career progression, relocation expense, etc. Ref: CW/1741

Senior Database Designer

"to make a major personal contribution to detailed technical design" up to £15,000 Central London

Sainsbury, the UK's leading food retailer, has an outstanding record of profitability and growth. Our success is based on the quality of our products, our service and most of all - our staff.

In an organisation which each week sells more than 7,000 product lines to 6 1/2 million customers buying 125 million items... systems are vital to our on-going business. Our present configuration comprises IBM 3033 and Atlas 10 mainframes and we have a major commitment to a significant on-line database systems programme covering distributed stock control, purchasing and management information systems.

We now seek an additional DP professional to join our database design team and become involved in all aspects of detailed technical design as well as advising on technical issues.

You should have a solid IBM background and at least 2 years' experience in the design and implementation of DL/I under CICS or IMS DC. Experience of performance monitoring and IRC would be an advantage.

Excellent benefits include:

- interest free season ticket loan
- subsidised restaurant
- profit share after 2 years
- share option scheme after 3 years
- BUPA
- relocation assistance, where appropriate

For an informal discussion please telephone Dave Anderson, on 01-921 7323.

Alternatively please write with a detailed c.v., or telephone for an application form to: Lorraine Catherides, J. Sainsbury plc, Wakefield House, Stamford Street, London SE1. Tel: 01-921 6047.

The IBM SYSTEM 34/36/38 Recruitment Specialists

RPG II COMPUTER SERVICES MANAGER FOR IBM SYS/36 SITE TO £14,000+ RELOCATION EXPENSES S.E. COAST

My Client (part of a multinational Group) designs and manufactures state-of-the-art electrical and electronic equipment. Continuous investment in the latest design and manufacturing techniques ensures their reputation as world leaders in their field. Employing approximately 550 staff they enjoy a multimillion pound annual turnover.

The SYS/36 newly installed is utilizing a range of computer based control systems in manufacturing, marketing and financial area.

The computer services manager is a newly created position involved in all aspects of design, analysis and programming. The candidate will require a sound understanding of how a company is organised and operated, its procedures and controls. Managerial experience in a manufacturing environment with broad experience in several functions would therefore be desirable.

The responsibilities will include a phased withdrawal of bureau services and a plan for the introduction and purchase of packaged software including MAAPICS. As packages improve and new packages are introduced you will advise and explain the benefits involved. An understanding of micro's and proposing the need to acquire more in this range whilst maintaining a cost effective balance to the SYS/36.

This is a vital role in a friendly and progressive company where skills of communication with users at all levels will be necessary. Flexibility and the ability to view the appointment as being a member of a team incorporating all user departments and their needs is essential.

For further information please call Richard Milgum on 01-354 1055 during office hours or 01-958 2553 evenings and weekends.

Scientific Programmers and Systems Analysts Bristol

Opportunities exist for men and women to join us in the following job areas of our expanding high technology operations in Bristol.

Scientific Programmers

Working in an IBM mainframe environment, you will undertake technical programming in support of a wide variety of projects. This will involve writing programmes, largely in FORTRAN, for batch or interactive use; assisting with programming problems; supporting colour graphics application and gaining knowledge of other programming languages.

A degree or equivalent in Maths, Computing or Engineering is required together with programming experience, preferably FORTRAN.

Systems Analyst

To liaise with other departments to establish and define system requirements and carry out detailed technical design and specification of systems modules and test systems prior to implementation.

A degree or equivalent in a technical discipline is required together with commercial data processing experience as a programmer or analyst in a manufacturing industry.

Salaries are negotiable and terms and conditions will reflect the level of these appointments. Where appropriate, a relocation package will be available to assist successful candidates in moving to this highly attractive area of the South West.

In the first instance, send your c.v. in confidence, quoting Ref: 240/DH, to D. P. Healy, Recruitment Department, FPC 104, British Aerospace PLC, Dynamics Group, FREEPOST (BS 3666), Bristol BS12 7BR. No stamp required. Alternatively, you can telephone for an application form on FREEPHONE 9918, Ext. 1030/778.

Unequaled in its range of job opportunities

There's more to...

Stocks and Shares than meets the eye

If you are not already a 'City' person, you might be unaware that Wedd Durlacher Mordant and Co. is one of the largest, if not the largest Stockjobbing firm in the UK. Their markets are worldwide, their reputation is impeccable and their history, from the late 19th century onwards, shows them to be far sighted and innovative.

In the past year, the Firm has closely examined its data processing philosophy in relation to the changing City environment and has mapped out expansion plans that will ensure it retains its leading role in the securities industry for the remainder of the millennium and beyond. The plans call for a host of major new developments, all of which will utilise the latest concepts of design and technique, together with a significant increase in hardware and manpower resources.

Their current configuration is based around two ICL 2955s presently operating under DME/2; VME/2900 is being installed to support future systems. IDMS, DDS and TPMS will be adopted to manage the forthcoming database and teleprocessing facilities.

The Firm looks after its staff extremely well and offers the following benefits:

- comprehensive pension scheme
- free private medical care
- interest free season ticket loan
- £150/day luncheon allowance
- 20 days annual holiday, minimum
- life assurance cover
- paid overtime
- 33 1/3 hour week
- sports facilities

Can you help?

- Would you enjoy working in an environment introducing real-time and database concepts for the first time?
- Would it be refreshing to start from scratch and to find your ideas and experience are of vital importance?
- Would you like to learn more about the Stock Market and the many applications associated with its activities?
- Would you be interested in working for a company where your potential income can be far in excess of your contemporaries outside?

You should not let the opportunity pass by — contact us now to find out more.

Please send your Curriculum Vitae or Telephone Barrie Frost for an application form.

Alimand Computer Resources Ltd
15/17 City Road, London EC1Y 1AA. Telephone: 01-920 0801 (24 hr)

Systems Analysts

c.£12,500 — c.£16,000 incl. bonus

Experience of working in a similar hardware/software environment, with database, data dictionary and online experience at design level. Specialisation in any of these skills would be of great interest.

Technical Programmers

c.£12,500 — c.£16,000 incl. bonus

Possessing a sound understanding of VME/2900 and the ability to provide swift system support in a highly sensitive live environment; knowledge of IDMS, DDS or TPMS would be a decided advantage.

Senior Programmers

c.£12,500 — £15,000 incl. bonus

Ability to lead small teams, to train and advise those with lesser experience, and possessing a high degree of expertise in the use of IDMS, DDS, TPMS and COBOL.

Programmers

c.£10,000 — c.£12,500 incl. bonus

18 months or more experience using COBOL, preferably though not essentially, in an ICL 2950/60 environment; prior exposure to database and online developments would be useful.

Analyst/ Programmers

CRAMLINGTON, NORTHUMBERLAND
up to £11,112

The British Gas On Line Inspection Centre has an international reputation for the development of sophisticated methods of inspecting high-pressure pipelines. There are now two vacancies for graduates in numerate subjects with several years relevant experience, to work on a major scientific project.

A vital part of the project, which involves the production and use of a very advanced inspection system, is the computer based analysis of complex data. This presents challenging problems to many disciplines and requires close co-operation with other scientists and engineers.

The senior post carries responsibility for the computing aspects and directly supervises the junior one. In addition to the main task of software system production, the work will involve agreeing targets, setting up and supervising contracts, forecasting loads and organising operational use. There will also be the opportunity to contribute to other work of the Computing Group including different inspection techniques, more general purpose software, and support for other users of the computing resources.

Four VAX computers are used and programming is in FORTRAN 77. Experience of these would be an advantage. Salaries: up to £11,112 for the senior post (ref OLI/539) and £9,212 for the second post (ref OLI/546).

Please telephone, quoting the appropriate reference number, for application forms: The Personnel Department — Crumlington (0670) 713401 ext 291. Closing date for applications: 5th April 1984.

Our client is the European Research and Development centre of a well known world-leader who are Designing and Developing a new generation of electronic equipment and products to support the Food Processing and Retail Industries in particular, as well as the more general Commercial and Industrial market sectors in over 20 countries in the Western hemisphere.

These electronic measuring, monitoring and data acquisition products utilise Motorola 6809 Microprocessors running FORTH Applications and Systems software. Special kernel software will be generated in a unique GOULD SEL machine based development running UNIX.

Our client wishes to recruit a number of development programmers who will form the nucleus of their R & D Team for current developments, and then to be later involved in "new technology" system developments. Opportunities therefore exist for people at graduate level through to those who may already possess up to three years programming experience, whether this has been at Operating System and Compiler level, or purely applications orientated.

Any experience in Real-Time applications and system development would be useful, and Process Control, Electronic Instrumentation and other similar types of environment experience would obviously be relevant.

Applicants are invited to call **Rex Ashcroft** either directly on **Amsterdam 76 09 47** during working hours (Amsterdam 73 78 22 evenings and weekends), or via our London office on **01-935 0871** to discuss these opportunities in more detail. You may also send a copy of a detailed career history to either office at the addresses below if you prefer. Initial interviews will be held in London during the second week in April.

USA1984 WELCOME TO THE NEW WORLD

IBM PROGRAMMERS/ANALYST- PROGRAMMERS/CONSULTANTS WITH

**IMS DB/DC, IDMS, or CICS/DLI
ONE YEAR CONTRACTS - WITH PERMANENCY OPTION \$25K-\$45K**

Exciting New Year opportunities are offered by our client, one of America's leading consultancies. Corporate headquarters are located in historic Boston and 14 offices are strategically placed in Pennsylvania, New Hampshire, Connecticut, New York, New Jersey, Indiana, Illinois, Maine & Rhode Island. In 1983, revenue of over \$20 million was generated by the 500 employees of our client.

Your assignment could take you to the most famous companies in the world, where high technology and superbly trained D.P. professionals will ensure that your career adds a new dimension.

QUALITIES REQUIRED

TECHNICAL

- IBM experience as a programmer, analyst programmer or consultant.
- 3-10 year IBM COBOL - with IMS DB/DC or IDMS or CICS/DLI

PERSONAL

- Degree, HND, or equivalent preferred
- Driving licence - Essential
- Good communication/interpersonal skills

REWARDS

- One year contracts - with extension or permanency option
- Hi Visa
- Air Fares, baggage allowance
- Assistance with accommodation
- Initial 3 day hotel stay
- Salary - \$25K-\$45K

INTERVIEWS

- Will be held in London in March.

DEVELOPMENT
ENGINEERS**

Make the intelligent move in hardware development

With our client an undisputed electronics leader. It's your chance to influence the next generation of high performance microprocessor systems. And it is an opportunity for real influence. This is unparalleled development work, fuelled by significant sales and booming world demand.

Our client is developing a new full 32 bit virtual memory microprocessor based product running under the UNIX* operating system including ethernet local area networking.

As a member of a team of systems hardware and software specialists addressing graphics applications, you will be engaged in design and development from concept to production. Experience is therefore vital. Hardware design experience utilising 16 or 32 bit microprocessor elements. Creative, communicative, and as ambitious as the company, you should also be a graduate in a relevant discipline.

Top salaries, excellent pension and life assurance, full relocation expenses, and unlimited scope for real personal involvement. All on offer with our client. An intelligent move for your career.

Please write with full personal and career details quoting Reference 2890, indicating any companies to which your application should not be forwarded.

Real-Time Analysts & Progs

Hants/Berks: Salaries to £12K

Real-time Analysts and Programmers, with at least two years' post graduate industrial experience, are urgently sought by a leading consultancy. The broad range of projects they undertake, ranging from advanced defence systems through to office automation products, guarantee a varied and stimulating working environment. Your soft-

ware skills should include substantial real-time programming in a block-structured language and an Assembler, combined with a knowledge of the utilities offered by operating systems such as RSC, VMS or UNIX. For those applicants with non-management experience, or potential, rapid promotion is highly likely.

Ref: L/48/A

Comms Software

Overseas: Package to £22K

An internationally renowned Systems House and Computer Manufacturer has recently launched a range of Data Communications and Networking Products and is, therefore, seeking additional Programmers and Designers. Suitable applicants should hold a numerate degree and have at least three years relevant post-university experience with either a Systems and Software House or mini/micro computer manufacturer. In particular, you will be

expected to have an in-depth knowledge of Data Communications, Networking Systems (LAN's or WAN's), communications protocols (X25, SDLC/HDL/C) or office automation systems. Successful applicants will undergo intensive product training at the Company's Copenhagen Head-Quarters and, thereafter, you will be based in USA, Singapore or an EEC country.

Ref: L/5/B

Micro Applications Consultants

London and E. Midlands: Salaries to £25K (O.T.E.)

Profile: Even Computers Ltd is a leading supplier of UNIX based systems and networks in particular OMNI-11 and is again poised for a period of planned growth in 1984. The company has recently established a new work of national service and support centres such as Regional Head-Quarters based in The City and Nottingham and support offices in Bristol, Manchester and Slough.

Personnel: Applicants aged 25-35 years should have practical programming, systems analysis or design experience gained in a commercial environment. Your programming background must include fluency in two or more of: PASCAL, C, COBOL, FORTRAN or Business BASIC. Of particular interest will be those who can combine a sound knowledge and proven experience of applications software in such areas as word processing, database management, operating systems and communications software. Candidates who are familiar with UK accounting practices are also encouraged to apply.

Job Content: All positions entail a significant degree of client contact in the form of product demonstration, seminars, influence and on-site client training, and post-sales support. Well developed interpersonal skills are therefore essential. A willingness to travel within the UK and when necessary, a degree of paramount importance.

Rewards: Earnings will only be limited by your ability since in addition to a very competitive salary, our clients offer an outstanding sales and performance related bonus scheme. All positions carry a generous car allowance or company car.

Applications: Please forward a well documented resume or alternatively telephone one of our Consultants on 01-483 10.

Graduate Programmers

London & H. Counties: Salaries to £8.5K

A number of exciting opportunities have arisen in London and the Home Counties for Programmers who graduated in 1982 or 1983. You should hold a first or second class honours degree in Computer Science, Mathematics or Electronic Engineering and, of particular interest, will be applicants who additionally

hold an MSc. It is essential for all positions that you offer fluency in PASCAL, C, ADA, PROLOG, LISP or Assembler. Ideally your project work and/or subsequent experience should include compiler writing, expert systems, firmware development or UNIX.

Ref: L/5/C

Systems S/W Development

W. Home Counties: Salaries to £16K

Software Engineering Professionals are currently required by the development division of a leading U.S. Systems Supplier. Suitable applicants should hold a first or second class honours degree in Computer Science, Mathematics or Electronic Engineering supplemented by at least two years software development experience in a real-time multi-computer or microprocessor environment.

Familiarity with distributed processing techniques, communications software, office automation systems or personal computing would be an advantage, but, more importantly, you should be innovative, flexible and have the ability to learn quickly. Working as a member of a small team, you will be encouraged to develop your own ideas whilst liaising closely with your team colleagues.

Ref: L/6/B

VAX/FORTRAN Progs

London: Salaries to £12K

An International Systems Company specialising in the development and marketing of communications software is seeking additional Programmers and Designers for its London Headquarters. Candidates, aged 22-27 years, should hold a numerate degree and have a minimum of twelve months FORTRAN programming experience, preferably gained in a PDP-11 or VAX environment. Application

areas of interest include Office Automation, Viewdata and Prestel, Data Communications and Distributed Processing. Since these positions entail a high degree of client liaison, you should possess excellent personal communication skills and be prepared to travel both nationally and internationally.

Making sure you reach more job hunters is now as easy as ABC.*

Our ABC figure—120,139

Our nearest rival's
ABC figure—110,920

*Audit Bureau of Circulations.

The latest ABC figures prove that Computer Weekly is way ahead of its nearest rival.

Over 9,000 copies ahead. Just check the table below and you'll see how Computer Weekly can put you in touch with more job hunters than any other computer journal.

But not only do we reach more people, our precise targeting ensures that we reach the right people.

The people in key job moving

categories. People like programmers, analyst/programmers and systems analysts/designers.

In fact we carry more vacancies for the most sought after computer pro-

fessionals than any other journal.

And our effectiveness as a recruitment medium is second to none.

For more information on how Britain's leading computer journal can help you reach more job hunters at no extra cost, ring Neil Thackray on 01-661 3107 (direct clients), or Julie McNally on 01-661 3452 (consultancies).

£1,000,000,000 per annum !!!

The annual turnover of our clients is representative of their influence and presence in the international marketplace. They are now seeking to employ two additional systems professionals who will assist in the development of d.p. solutions for the 1980's.

SYSTEMS ANALYST ANALYST PROGRAMMER

We would be interested in hearing from candidates who would enjoy the challenge of implementing systems in a mini computer environment, which makes use of the latest office automation and communications products.

The successful candidates will form an important part of a team of d.p. professionals and will be actively encouraged to develop their technical and personal skills. Previous experience within a Cobol environment, particularly working with mini computers would be an asset. The systems analysis post could suit a competent analyst programmer who is seeking his first job in full time analysis.

The d.p. department is located to the North of the City.

THE REWARDS:

Salary will be a matter for negotiation at the time of interview, however our clients are happy to reward excellence and can perceive no problem in attracting the right individuals to join them. An excellent benefits package including profit sharing bonus is also available.

If you are interested in hearing more about the opportunities offered then please telephone Chris Morrow on 01 837-0451. He will be pleased to discuss the positions in greater detail.

**TOTAL
SELECTION
LIMITED**
388, City Road, London EC1V 2QA

01-837 0451

Because if you're looking for more than just another programming job, Norwich can offer you a whole new lifestyle, in a city where the novelty won't wear off in weeks and the work will sustain your interest.

Imagine working close to a sophisticated shopping centre, a Continental-style open market, a majestic Norman cathedral, cobbled streets and carefully preserved medieval buildings. Think of perhaps owning your own house where prices are amongst the lowest in the country... of spending days off on the nearby Norfolk Broads.

**Senior Programmers
to £9,660
Programmers to £7,896**

Best of all, as a Programmer with the 73-strong Joint Computer Department (JCD) of Norfolk County Council and Norwich City Council, you'd be really involved with the computing development of both authorities and in applications covering the whole spectrum of local government responsibilities, from budgetary control to housing, rating and education, accident statistics, manpower planning and social services. Growing demand for our services has created a need for Senior Programmers and Programmers to be based in the JCD at County Hall, which is set in parkland on the edge of the City.

When the world's your oyster, why NORWICH?

It houses twin IBM 4341/402 computers supporting 170 terminals, together with a CMC Reality and IBM PC and Superbrain microcomputers. GUTS (timesharing) and CICS systems are used for most development work. The terminal network over the county is expected to increase substantially over the next two years and mainframe development will make use of productivity aids, packages etc. A research team has been set up to help introduce new small systems. The environment is progressive, challenging and sure to widen your skills.

We are particularly looking for candidates with experience of PL/I, but experience of Cobol programming would be considered. Knowledge of Assembler, UFO or Easytrieve would also be useful. At either level you would work as a member of a team, so good interpersonal skills are considered desirable. This is especially important for the Senior Programmers, who should be capable of supervising junior staff and of writing program specifications.

Telephone Tony Woodhouse NOW on Norwich (0603) 611122, ext. 5159 for further information or send full details to Development Manager, Norfolk and Norwich Joint Computer Department, County Hall, Norwich, NR1 2DH.

Closing date 19th April 1984.

READING

Our client Micro Memory Systems is dedicated to the development of high technology peripheral products, and is one of the most successful distributors of computer peripherals and micro related disk subsystem products in Europe. As part of their expansion programme, they have opened a new subsystem production and assembly centre based close to Junction 12 on the M4.

SYSTEMS SOFTWARE ENGINEER
£7-£11K + Bonus + Benefits
The continuing success of our client's products has led to an expansion of their software department. This has created an opportunity for an ambitious and energetic professional to become closely involved in the development of software to integrate our client's range of products to various micro-computers. This will include designing and developing device drivers and diagnostic utilities, and suitable candidates will have experience in one or more of the following:-
• 1-4 years software development on micro.
• Good micro assembler (additional high level language useful).
• Understanding of micro operating systems internals.
This exciting and challenging role offers total involvement, the opportunity to extend your skills, and the facility to become familiar with a variety of 8 and 16 bit micros and software (example MS-DOS, PC-DOS, CP/M-86, etc.).
For further information call Keith Taylor at our Reading office or write enclosing full c.v.

MICRO COMPUTER SUBSYSTEMS

HARDWARE DEVELOPMENT SPECIALIST
circa £11K + Bonus + Benefits
As a result of the company's growth, we are seeking a bright and competent individual to develop micro related hardware within a small but extremely professional team. Candidates must have a good grounding in electronic engineering, show a practical knowledge of micro processors and a working knowledge of software.
Ideally, the candidate will already have experience in disk drives and controller technologies, in a similar environment, but consideration will be given to candidates working in a peripheral/systems company in a field service environment.
This position offers an exciting challenge and the opportunity to become an integral part of a successful and expanding company.
For further information call Barbara Allen at our Reading office or write enclosing full c.v.

Move Into Pre and Post Sales Consultancy

Large Scale Datacomms/Distributed Data Processing/ Office Automation Projects
Central London/Birmingham
Circa. £13-17K plus car

If you are currently working for a terminals supplier, a systems house specialising in data communications systems design and implementation, a data communications specialist company, or a large data communications network user organisation we believe we can offer you a chance to significantly extend your technical and personal skills.
We are a recently formed division of a massive UK blue chip company, created specifically to develop our client's larger scale computer projects. One of the first of these is a complex data communications/DDP/office automation network which promises a technical feast for the initiated. Because we are a new division your skills will be a major factor in our success. You will have real influence and be able to quickly increase your personal status as the division grows.
Your activities will be immensely varied, with an emphasis on understanding and interpreting our client's needs and assisting our Senior Sales Executives in recommending appropriate

solutions. Subsequently you will be involved in putting forward proposals, presentations, systems design, system implementation and commissioning, training and post sales support.
You should have significant experience of some of the following activities: design, development and implementation of data communications systems and networks; design and implementation of interactive terminal systems; selection/specification of associated items such as: processors, printers, terminals, modems, multiplexors, interface modules; training of end user personnel. From this you will have gained a good knowledge of communications protocols, circuit standards and operations, front end processor systems and their operation, TP monitors, modems - principles and operation.
Candidates who are free and willing to travel extensively should contact Ian Goldsmid on 01 935 0671 during office hours; or 01 959 7132 evenings and weekends; alternatively submit a comprehensive career resume to our London office.

MIDD. **IBM AN/PROGS** **to £13,000**
Work on a new development project! Our client, an international organisation based in Middx./W. London, seeks to recruit AN/Progs to be involved with the development of a new package. They retain IBM 4300 running under MVS using COBOL, CICS and Database, plus main and micros. All you need is TWO YEARS' IBM COBOL with the desire to succeed.

CITY **COMMS SUPPORT** **£12,000-£14,000**
An exciting opportunity has arisen for a communications based person to join a major international systems house. They seek a Programming or Operations Support background and offer an excellent career utilising the latest DEC kit and systems in the UK and abroad. Their considerable BENEFITS package includes a good bonus scheme.

SURREY **IBM AN/PROGS** **£10,000+ BENEFITS**
Exciting opportunities exist within this new major organisation for AN/PROGS with a minimum of 18 MONTHS' IBM COBOL AND/OR ASSEMBLER. Company is currently utilising IBM mainframes running under DOS/VSE using CICS and DL/I for which TRAINING can be given. Career prospects are outstanding and excellent benefit package may include mortgage.

HOME COUNTIES **ICL ALL LEVELS** **£9,000-£14,000**
Several clients based in London and the Home Counties seek experienced ICL staff for their VME installations. PROGRAMMERS with at least ONE YEAR'S commercial COBOL and ANALYSTS with two or more YEARS' formal analysis are required for development work on a range of systems. VME exposure is desirable although not essential in all cases.

MIDD. **DEC AN/PROGS** **£10,000-£12,000**
Two commercial market leaders seek Analyst/Programmers for their expanding D.P. effort. They require two or more years' COBOL or BASIC programming gained in a DEC environment with good user exposure. Basic salaries are augmented by excellent packages to include relocation and possibly car.

CITY **WANG COBOL** **to £14,000**
We have at present been retained by various City-based companies to recruit experienced Programmers with WANG COBOL. These positions offer excellent benefits some of which include subsidised mortgage. If you have a minimum of ONE YEAR'S WANG COBOL please to find out more about these outstanding opportunities.

CITY **RSTS/E/BASIC+** **CNEG**
A growing consultancy requires an experienced Analyst/Programmer to work on financial and production control systems for a variety of clients. They seek an in-depth BASIC+ background with strong analytical skills and a self-motivated approach. The successful candidate can command an excellent salary and future prospects.

15 Red Lion Square
London WC1R 4AH **242 9796**

CAREER OPPORTUNITY WITH LEADING BRITISH MICRO MANUFACTURER

SYSTEMS PROGRAMMERS
£8.5K to £13K

We offer a rare opportunity to live in Oxford and work with a team of experienced systems designers, developing our next generation of computer and instrumentation products.

Our current very successful microcomputer family includes a state-of-the-art network system and new developments will make use of 16 bit processors and gate array technology. Our products are designed to maintain our reputation for high standards of quality and reliability.
The successful applicants will join small teams of systems programmers responsible for all the systems software on our range of microcomputers. This covers firmware, operating systems and utilities for both stand-alone microcomputers and network stations.
Systems Programmers contribute to development projects from concept through to release. Projects are normally tackled by small teams providing maximum involvement and opportunities for responsibility at project leader level.
Precious experience should include a good degree and at least two years' experience of systems software development in industry. Experience of assembler and a high-level systems programming language is highly desirable, as is an understanding of microcomputer hardware.
We offer modern office accommodation and a salary range of £8500 to £13000 per annum depending on experience. An attractive range of benefits include: 25 days paid holiday; free BUPA; life and disability insurance; a pension scheme and generous help with your relocation to this area.

If you are interested in this vacancy please contact Polly Keane on Oxford (0865) 726136 or write for an application form, quoting ref: SP/CWS.

RESEARCH MACHINES
[MICROCOMPUTER SYSTEMS]
RESEARCH MACHINES LTD, Mill Street, Oxford OX2 0BW. Tel: (0865) 726136

Systems Engineer

c£14K.

Working

At least 7 or 8 years experience in software is essential (of which at least half would have been in Systems Design and Analysis using computer modelling techniques).

Supported by a Programmer you will take responsibility for the design of a functional computer model of a complex real time signal processing system.

CW1201

Software Team Leader

c£12K.

Working

You'll probably have 4-6 years experience of PDP11 Series or Ferranti Argus/M700, as you take on the responsibility for the design and production of complex real time applications software (running on a small minicomputer) operating as part of an advanced signal processing system. Your responsibility will extend from the initial design on the VAX11/750 host to its transportation to and commissioning on to the Target system.

CW1202

Software Engineer

c£11K.

Working

You'll have 2-3 years in Software Design using modern structured programming techniques in Assembler and high level languages. The team that you will join will be carrying out software design to requirement specs, and specifying and producing real time software.

CW1206

Senior Programmer

City of London to £15,000 plus benefits

To work for an international bank in the city. Applicants must have knowledge of Data Communications (from the systems programming perspective), IBM systems (preferably under DOS/VSE) and COBOL with CICS. A minimum of 7 years relevant experience is anticipated. Knowledge of IBM assembler and banking applications would be desirable.

CW1203

Senior Sales Executive

£ negotiable

South.

Required for city backed microcomputer company based in the south, specialising in Local Area Networks through distributors and OEMS.

Task to increase customer base in UK, Western Europe, Africa and Middle East, to increase turnover by £1m in the first year. Sound technical knowledge of microcomputers and LANS, fluency in French and German and a numerate ability required. Desired age mid thirties, must demonstrate practical sales achievement and sound career path. Package to include significant incentive, as well as company car, health insurance etc.

TAX-FREE SAUDI ARABIA**COMPUTER HARDWARE and SOFTWARE PERSONNEL**

The company is the sole agent in Saudi Arabia for one of the world's leading suppliers of IBM compatible mainframes and peripherals in 4300 to 308X range. It has an immediate need for the following individuals matching the exact requirement, who are:

HARDWARE ENGINEERS

At least three years' experience of installation and maintenance of IBM or IBM DCM in medium to large systems including CPU and other peripherals is required, although right candidates would be product trained. Individuals with better experience and proven leadership record/quality will be considered for senior engineers positions.

SYSTEMS SOFTWARE SUPPORT REPRESENTATIVES

Need to have spent six years in IBM System software environment, the last two years in MVS, VM, CMS, DOS/VSE, in medium to large installation, with speciality to support customers in installations, planning, tuning, training, as well as systems software installation and maintenance. Experience in major subsystems, e.g. CICS and VATM will be favoured. Individuals with better experience and proven leadership record/quality will be considered for senior positions.

SALES REPRESENTATIVES

A minimum three years' proven sales experience of IBM or IBM PCM Mainframe is needed. Software background or Middle East market experience will be definite pluses. Individuals with right experience and background will be considered for sales managers positions.

Please forward your c.v.s to Fayyaz Kahloon at Fissions Limited, 10 Mackay Road, London, SW4 or phone him at 01-627 4883.

IBM 370 opportunities in Nigeria

2 year contracts

c£32k p.a. + big benefits

UAC in Lagos, Nigeria, is a member of the Unilever Group with a well established IBM 370 installation under DOS/VSE. Rapid company expansion has placed increased and changing demands upon our computer and business systems, so we're re-thinking our entire operation. Which is why we're seeking two well qualified and experienced self-starters for the following opportunities - COBOL, DOS/VSE and other operating systems experience is essential, working in a highly demanding environment.

Software Manager

Your main objectives will be to monitor the current operation, strengthen any weaknesses and manage, motivate and train a small team of support programmers. You will also participate in the review of the current hardware facilities and assist in the management and implementation of any developments which result from that review. To meet the demands of the job you should currently be in a management or very senior position within a software team at an IBM installation involved in a wide variety of applications.

Systems Analysts/Analysts

Firstly you will be involved in a review of existing systems to determine any weaknesses and establish any omissions. You would then be responsible for implementing any agreed proposals on how those systems should be further developed to meet new requirements. The training of local support programmers would also come within your orbit of responsibility.

These interesting opportunities offer the chance to work in a fascinating part of Africa, earning around 34,000 naira a year, which at current exchange rates means about £32,000 sterling. You'll also receive an end of contract bonus, free air fares, subsidised accommodation, children's education allowances if required and other overseas benefits.

If you're looking for a big opportunity to capitalise on your experience, you should find out more about these positions.

Interviews will be held in London.

Write with brief career details to:

Roger Harvey, UAC International Ltd.

UAC House, P.O. Box 1

Blackfriars Road, London SE1 8UG

**Data Processing Manager**

Worcester

c£13,000 + Car

Our client, Morganite Crucible Limited, is a highly successful subsidiary of a major international group. The company, a world leader in its own specialist field of high-technology products, has the support of a progressive and well established DP function.

Highly advanced commercial and financial DP systems are already in operation and significant development is planned in production and warehousing/distribution areas.

The DP Manager, who reports to the Financial Director, is responsible for budgeting, staffing and day to day control of a department with ten experienced computer personnel. Specific responsibilities include:

- * Systems development and implementation
- * Selection of equipment and software
- * Project planning
- * Feasibility studies
- * Recruitment, training and staff development

The position will suit well qualified systems analysts, project leaders or deputy DPM's in their late twenties or early thirties with several years relevant experience preferably gained in a manufacturing environment. In addition to practical experience, it is essential that candidates have high standards of oral and written expression; proven managerial skills and the ability to play a major role as a member of a Company's management team. A knowledge of large mini computers and micro-processors would be useful but is not essential.

The position offers an excellent opportunity for career progression in a demanding and professional environment. In addition to an attractive salary, benefits will include a 1.6 life company car, bonus scheme and generous assistance with relocation to an attractive rural area.

Suitably qualified candidates, male or female, should write enclosing full career details and quoting reference MCS/8415 to:

Jerry Wright, Executive Selection Division, P.O. Box 120, Livery House, 169 Edmund Street, BIRMINGHAM B3 2JP Tel: 021-236 5011.

CHALLENGING OPPORTUNITIES AND HIGH EARNINGS FOR TOP CALIBRE PERSONNEL IN SAUDI ARABIA

CALL 01-937 6586 NOW

Our clients, a major US corporation are implementing a large integrated system for military logistics/supply planning at a number of locations in Saudi Arabia and have immediate openings.

Design and Development**Assistant to Development Manager**

This is a new position which has arisen due to the increased workload on the project. You will provide technical support and assistance to the Development Manager in the areas of implementation, maintenance and supply. Qualified, you must have 10-15 years' software development experience, 5 years of which should have been at senior level. (Ref: CADMI)

Maintenance Manager

Reporting to the Development Manager and responsible for a department of 16, you must have a minimum of 12 years' related experience including maintenance software development. RAF software maintenance experience highly desirable. Must have at least 2 years' managing experience in a software development group in a distributed system environment. Qualified with HP 3000 experience highly desirable. (Ref: CMM)

Technical Support Manager

Reporting to the Development Manager and responsible for a department of 6, you must have 8-10 years' related experience including at least 5 years' in HP 3000. Image and distributed systems experience also required. (Ref: CISM)

Salaries for the above positions are negotiable according to qualifications and experience.

Senior Systems Analysts and Systems Analysts £20-25,000 p.a. 7-10 years' experience ideally in maintenance systems (pref. military logistics) or supply inventory systems. HP 3000 experience highly desirable. (Ref: CSSA)

Lead Programmer and Senior Programmer £16-18,000 p.a. 3-8 years' experience COBOL and HP 3000 essential. (Ref: CPM)

Operations and Maintenance Applications Programmers

Salary negotiable. Designs, codes and tests in-house developed computer programmes. Must have 5 years' experience in the development of related systems using structured COBOL. (Ref: CAP)

Operators £13,500 p.a. A minimum of 3 years' experience (must include HP 3000) plus ideally IBM. (Ref: COP)

Employment will be for a minimum of 1 year. In addition to tax free salaries and a completion contract bonus, excellent benefits include free accommodation, subsistence allowance, generous leave with 3 home paid tickets and free primary medical care.

Please call now to discuss your application. Interviews with our clients will take place week of 9 April. Webb Whitley Associates Limited, International Recruitment Consultants, 45 Kensington High Street, London W8 5ED.

Webb Whitley Associates Ltd.

Head of Entertainment Software Cambridge

This is an outstanding opportunity to join Acornsoft, the software publishing company within the Acorn Computer Group.

Reporting to the Managing Director, the Head of Entertainment Software will take overall responsibility for running and developing the Entertainment Software Group. The group currently has a budget of £500,000 and a staff of six programmers and program testers, producing board games, arcade games, quiz material and hobby related learning programs.

Key responsibilities include managing and controlling the group, evaluating software, project management, quality assurance and the development of new concepts in entertainment software.

Creativity and experience of entertainment software design are the primary requirements, together with a background of developing commercially successful software products for microcomputers. Education to degree level is desirable.

The benefits package, including an excellent salary, will reflect the importance of this position.

Exciting new management opportunities with young, expanding software house...

PROJECT/TEAM LEADERS to £11,500

Retail/Business Systems

You will be expected to produce both systems and programming specifications and lead small teams in their subsequent development. There will be some client contact but most of your responsibilities will revolve around the day-to-day control of the programming teams, ensuring a strict adherence to standards and procedures. A detailed knowledge of a Business BASIC - particularly DG or MAI - is essential.

In both cases salary will be negotiable in the range indicated, according to experience and ability, and will be accompanied by a full range of benefits. Candidates who do not have the required experience but who could contribute at a lower level - and participate in the growth of a young company - should also apply NOW for an early interview.

KPG
01-948 5922

KPG Computer Support Services Limited
Cobden House, Park Lane,
Richmond, Surrey, TW9 2RA

In all cases you should ring David Mason Johns at KPG on 01-948 5922 (24 hour answering service) or on 01-891 0906 (evenings and weekends).

PRODUCT MANAGER to £15,000

Retail/POS Systems

Reporting to the Computer Services Manager you will take total responsibility for the allocation of resources and production scheduling within the retail systems area. Additional duties will include assistance in establishing growth patterns, manning levels and improving in-house standards and procedures. Although both DG and ICL hardware are involved, it is more important for candidates to have managerial ability.

A division of a rapidly expanding computer services organisation, this specialist mini/micro-computer systems house has been established for over seven years, and is now a recognised DG OEM and ICL Trader point. To allow for planned expansion over the next year they have re-organised to provide direct development and support to the vertical markets. As a result they now need to recruit further experienced professionals to strengthen the middle-management team.

ENGINEERING ANALYST

C. London

To £16 K

Our client, recognised as the world-wide authority in Engineering and construction, have identified the need for an ANALYST PROGRAMMER of a very special calibre.

Tasked with development and maintenance of existing systems within a multi discipline engineering environment you will be responsible for the technical quality of systems analysis, programming and documentation of new systems.

To successfully fulfil this task you will bring to bear in this role your expertise in the following:

★ Engineering (Process Industry)
★ Fortran

★ Prime/Primos
★ Data Base/Info

You...and your realtime software skills realising the fifth generation

The enabling technologies such as I.K.B.S. and Man-Machine Interface present for Software Engineers the most exciting and challenging aspects of fifth generation software engineering.

Salaries £7,000 to £15,000

Attractive Kent Location

The application of these techniques to our future products underpins our continuing success in the competitive market of high-technology electronics.

As part of Britain's most successful high-technology group we are perfectly resourced to make the required investment in people and technology. We see ourselves as a major contributor to the Alvey Initiative. All that remains is to attract the team of talented software professionals whose skills and creativity will realise the product.

If you have in excess of 18 months' realtime systems software experience in high-level block structured languages then you should apply. Our current investment is exemplified by the array of powerful 16 and 32 bit host processors, placing at your fingertips the most comprehensive set of software tools that the professional engineer could wish for.

Our working environment is relaxed yet creative - informal yet professional with the accent on 'delivering the goods'.

Our selection criteria are not hardware and software dependent, more important is a disciplined and structured approach to software engineering on some of the most exacting of realtime applications.

If you feel that you can make a contribution to these exciting new development projects, please telephone our Advising Consultants **Stephen Brown** and **Alan Carnell** on **01 935 0871**, or telephone in the evenings or weekends on **04024 72610** or **05827 2976**. Alternatively submit a full C.V., in confidence to the SCR London office quoting reference MA/1.

IBM Systems Programmers

(A chance to work with MVS/XA)

to £15000 plus bonus, plus car scheme

Redditch, Wores

Istel, leaders in the UK software industry, are seeking additional, talented IBM software professionals.

The Company's impressive Data Centre in Redditch, a pleasant area of Worcestershire, just South of Birmingham, provides a multitude of software services to Istel's considerable Client base.

Supporting a nationwide network of DEC PDP and VAX minis and the latest in high technology office and industrial automation services, is a large scale IBM/Amdahl configuration comprising three IBM 3083's (24mb each), a 3033 (16mb), a 3033AP (16mb), a 4341 (8mb), four 4331s and a 24mb Amdahl 5850/60.

This impressive array of hardware makes use of various permutations of MVS/SP 1.3, JES2, VM/SP2, ACF/VTAM v2, DOS/VSE3, IMS 1.2 (DB/DC), CICS 1.5 (under both DOS and MVS), VCNAL, MSS and RSCS, together with a full range of application languages and plans to implement MVS/XA later this year.

Istel is able to offer enormous scope to skilled IBM Systems Programmers, with a good knowledge of MVS or CICS/VS, who have a desire to take on responsible

positions within this progressive Company, where they will be actively encouraged, and assisted to broaden their experience through further training in some of the areas listed above.

At the more senior level, an opportunity exists for a Senior MVS Systems Programmer to take up a Team Leadership position, giving involvement in man management, technical planning and the provision of specialist advice to Senior Management on future software policy.

For Systems Programmers who are keen to build a satisfying and rewarding career, Istel offers considerable resources and unlimited career opportunities.

In addition, an attractive benefits package is provided which includes a company car scheme, 25 days holiday (plus statutory days), a bonus scheme, and full assistance with relocation expenses.

To find out more about these excellent career opportunities, contact Istel's Recruitment Adviser **Ian Payne** on **021-236 3781** or send him a brief Career Resume at the SCR Birmingham office.

SENIOR SYSTEMS DESIGNER

Greater Manchester

c. £12,000+
Car + Benefits

This company is a substantial manufacturing concern located in Greater Manchester and is a subsidiary of a major international British group with a turnover in excess of half a billion pounds.

An immediate priority is to rationalise the company's existing computer systems in accordance with corporate strategy which necessitates the recruitment of a senior systems designer. This position will report directly to London and will have the responsibility for the development, integration and implementation of the new DEC based systems covering all aspects of stock, production and financial management control.

The requirement is for candidates aged 25-35, preferably educated to degree level, with 2-3 years minimum involvement with PDP or VAX in an analyst programming role where a sound applications background both commercial and manufacturing, has been gained.

Ideally the successful candidate will have thorough knowledge of database and program generation techniques and more importantly the ability to lead this project from initiation onwards.

A strong personality, tenacity and drive, with the necessary inter-personal skills to relate at all levels, are a pre-requisite to the success of the individual.

The benefits of joining this large and prestigious group will include a negotiable salary, a company car of your choice within pre-defined limits and the real potential to become an important member of the management team in this progressive D.P. environment.

To apply for this challenging opportunity please write with full career details, or better still, telephone Angela Taylor for an immediate confidential discussion on 061-833 0846 during business hours. Evenings and weekends until 9.00 pm telephone: 061-865 5754.

ZEU'S HERMES DIVISION

Systems Analyst & Analyst Programmer South Yorkshire To £12,000 + benefits

We are the London and Scandinavian Metallurgical Company, a member of the Metallurg Group, and a leading producer of metals, alloys and chemicals worldwide. At our site in South Yorkshire we manufacture an expanding range of products serving the needs of the Aluminium, Steel and Superalloy Industries. The growing sophistication of our operations requires a corresponding growth in our Computing Resource.

Ours is a small but growing department utilising an IBM 4331/2 (soon to be upgraded to an IBM 4361) operating under DOS/VSE with CICS, DL1 and UFO. We work with a diversity of users on business and computer solutions to increasingly challenging problems. Future systems development will cover the full spectrum of the Company's business requirements in the Financial, Commercial and Production areas.

Growth is such that we have two posts to fill.

We require a **Systems Analyst** who will play a major role in the design and

implementation of enhanced business systems. Our informal but demanding management structure means that the successful candidate will have a unique opportunity to directly influence the success of computing applications within the Company. Energy, resourcefulness and credibility are what we need, combined with the motivational skills that are part and parcel of the leadership role, especially when dealing with client users.

We also need an additional **Analyst Programmer** who will work closely with the Systems Analyst, but who will be self confident and flexible enough to work independently on projects. Ideal applicants will have experience of on-line systems development in an IBM mainframe environment, but just as important is the eagerness and spontaneity to react to client needs.

Our advising Consultant is Brian Mitchell. Contact him on 081-491 1666 (work) or 081-485 7798 (evenings and weekends) to learn more about the jobs and the Company.

The Market Leaders

NETWORK CONTROLLERS

TO £12,000 + SUPERB BENEFITS

You've probably read no end of recruitment advertisements referring vaguely to 'rapidly expanding' networks, but when the Prudential makes such a claim you can be in no doubt of its substance.

As the UK's largest institutional investor, active in almost every financial market throughout the world, our DP facilities are of major importance. We operate an expanding countryside network, consisting of distributed IBM 8100's and around 700 remotely or locally attached terminals. You'll certainly be facing a stimulating new challenge if you're one of the experienced Network Controllers we're seeking to help plan and implement the operational control functions and the hardware and software changes required by new installations. Using a variety of sophisticated monitoring tools you'll be

expected to analyse problems and plan for them. In short, a big system and a lot of busy users will be dependent on you for continuity. Clearly we're looking for experience in all aspects of controlling the physical and operational layout of a substantial installation and ideally familiarity with a large IBM 8100 distributed network. You should be familiar with MVS, ACF/VTAM preferably using NCCF/NPDA, and have a good working knowledge of TSO. Formal training will be provided in problem determination and the use of software tools. It need hardly be said that an ability to keep abreast of new developments, and communicate with users on their own terms, is essential.

It's true that our specifications for this appointment are precise, but they have to be. Nevertheless, the man or woman who can

match them can look forward to the prospects of a career in a Company renowned for its concern for its staff. In the longer term we can offer opportunities of moving into systems programming or technical support. Your remuneration package will be enhanced by benefits that include: non-contributory pension, low cost mortgage, subsidised restaurant, generous holidays and active sports and social facilities. To find out more and perhaps arrange a meeting, contact: Ken Pomeroy, Personnel Executive, Prudential Assurance Co. Ltd, 142 Holborn Bars, London EC1N 2NH. Tel: 01-405 9222 x 2568.

Christian Rovsing A/S

Communications Software Designers

for
Advanced Data Networks Development
in the U.K., Denmark or the Netherlands

Christian Rovsing A/S is a large European manufacturer of state-of-the-art datacommunications networks whose products have excited considerable interest in Europe and North America, particularly amongst international airlines.

The company is now able to offer software engineers large turnkey development projects in the fields of

- ★ Network Protocols (including latest ISO standards)
- ★ Terminals and Hosts Protocols
- ★ Electronic Mail
- ★ High level Protocols (file to file transfer)
- ★ Specialized airline protocols
- ★ Network Management

Candidates should be software engineers with project experience in software development in datacommunications or real time environment or have programming skills in PASCAL

Contractors – What Will It Be? £

No – we are not aiming for a mass rates explosion but our clients are in need of freelance programming and analytical support and the remuneration is very attractive.

Naturally, we would be more than interested to hear from any contractor who is now or shortly to be available but in particular our requirements are as follows:

Programmers with PL/I, IMS DB/DC and JSP experience

Programmers with NCR mini/mainframe, IMOS/IRX/VRX and COBOL experience

Programmers with Univac QST100, DMS, TIP and COBOL experience

Analysts and analyst/programmers with banking/financial systems experience, preferably gained in an IBM mainframe environment.

Our clients are predominantly large organisations in the banking and insurance sectors who have extensive development plans and who offer excellent working conditions.

Please send your CV or telephone Barrie Frost

DEC ANALYST PROGRAMMER CITY BASED SHIPPING COMPANY To £12.5K

If you're feeling restricted in your present environment, take a good look at what our client, Ellerman City Lines, has to offer. One of the shipping industry's most respected names, they have a complex operation to support, one which will challenge and extend your skills in every way.

As an experienced Analyst Programmer, you will join a highly professional team developing systems on DEC PDP-11's running under DSM-11 (Mumps). You will be responsible for all accounting systems, liaising closely with the users to define and satisfy their needs. Your responsibilities will cover the full scope of the analysis, design, programming and implementation of systems, calling on the aid of external consultants whenever appropriate.

To fulfil this role, a minimum of three years DEC programming experience is required, ideally including Mumps, but full training will be given to Basic/Basic + programmers. Coupled with this, analysis experience, good communication skills and the ability to control projects from conception to completion, with a minimum of supervision, is essential.

So, if you are talented, ambitious and enjoy responsibility, set your sights on this career opportunity by calling Jane Emmanuel on 01-734 9723 daytime or 01-771 1000 evenings and weekends.

Nottingham

Technical, Sales & Management Appointments

Specialist Computer Recruitment Ltd

Part of a multi-million pound Group, we are an acknowledged leader in our field and, over many years, have enjoyed an enviable reputation for the quality of our product range.

Based in Nottingham with its inexpensive housing, we have all the advantages of big City life combined with our close proximity to beautiful countryside. The City's cultural and sporting heritage is renowned. Road, rail and air communications with the rest of the Country are excellent.

The Group is totally committed to Data Processing and our IBM System 38 is central to our business activities. We are currently able to offer exceptional opportunities to two System 38 professionals. Successful applicants will require a thorough understanding of RPG III, although experienced IBM COBOL Programmers with GSD exposure and the required levels of technical ability and business awareness will be given formal training in RPG III.

This is a first class chance to become an integral member of a small Data Processing team actively involved in projects from initial user contact to systems specification and design through to programming and implementation. Our standards are high, but we are quick to recognise potential and prospects within the Group are second to none.

The comprehensive remuneration package will include 20 days annual leave, subsidised meals, generous pension and life assurance cover. We will also provide assistance with relocation where appropriate.

For an immediate interview, please contact **Jim Mitchell** on **021 236 3781** (24 hour answering service) or at home on **021 427 2291** (evenings and weekends until 9 p.m.).

TECHNICAL SUPPORT C. £12,000

Update Computers, a young and expanding systems house, is looking for a capable and experienced person to be responsible for providing hardware support and to help in the further development of its systems.

Applicants should be experienced in maintaining microcomputers, hard disks and other peripheral equipment down to board level. Experience with local area networks would be an advantage.

A successful person could look forward to a larger role within the company.

Present systems are based upon the IBM PC.

Benefits include 5 weeks' annual leave, a non contributory pension scheme and a private health scheme covering the applicant's family.

Central London location.

Enhancing Patient Care

DATABASE OPPORTUNITIES Central London to £13,000

A major U.K. Finance House based near Covent Garden is currently undertaking several significant projects using the latest Database development techniques. To ensure that these are successful, they are now looking for an able D.P. professional who wishes to develop a career in database design and support.

You will be working in a small Data Administration group that supports development project teams, providing expertise on Data Analysis and Database Design and subsequently performance monitoring and tuning. The main database software is IMS/DB with CICS under MVS.

Probably in your mid 20's you will have had 2/3 years experience in either a database support group or in programming with DL/1 based applications. Salary is negotiable according to experience and will be accompanied by a generous benefits package which includes Non Contributory Pension, Group BUPA scheme, subsidised restaurant, and after a qualifying period season ticket, loan and mortgage facilities.

Call David Mason Johns TODAY on 01-948 5922 (24-hour answering service) or 01-891 0906 (evenings and weekends) for an interview. Alternatively write to him at the address below. Please quote Ref. 8231/CW.

EMPLOY

ENGINEERING OPPORTUNITIES

Northants

Our Client, market leaders in the provision of turnkey systems to interactive graphic and CAD applications, have seen a marked growth in their Client base and are now able to offer two unique career opportunities.

As sole UK distributors of leading interactive systems used across a diverse Client base in industry, commerce and public utility Organisations, the engineering facility is a vital factor in their success. Utilising the latest systems innovations which include VAX, 11/23, H.P. and M8800 technology, and with a planned development policy coupled to continuous evaluation of market and product availability, they fully intend to sustain their established reputation for technical excellence.

To support this, they now seek to appoint two key people into critical positions, in order to further improve the provision of a complete and efficient engineering facility servicing installations involving critical production areas.

Service Manager

c £15,000 + incentives

2 Litre Car

Your task will be to further develop and implement a Service Organisation on a system basis, to support users where down time is critical.

Able to demonstrate a solid technical career encompassing both hardware and software experience, you will lead from the front a competent engineering staff.

Experience in graphic/CAD facilities would be advantageous, but more critical is your ability to implement effective Management controls and supply technical and motivational leadership to your staff.

Providing support services from centre, phone support will play a major part, though you should be prepared to take on site visits personally if required.

To apply, candidates should possess a minimum education standard of HND (preferably a Degree) and be able to demonstrate a career to date that proves technical competence and the ability to assimilate new skills. By contributing to the growth of the Company, you can be assured of personal benefit and excellent career opportunities. Full induction and product training, together with generous incentives and benefits, including pension, private health plan and full expenses, indicate the environment. Full relocation assistance is available where necessary.

Candidates should contact the Advising Consultant, Brian Harris, on 021 236 3781 (24 hour answering service) or send current résumés to the Birmingham address shown below as soon as possible.

Senior Service Engineer

c £13,000

Plus Car

Providing Clients with a high level of service efficiency, demands technical competence and professional qualities that will be rewarded by excellent benefits and a highly rewarding career.

Working at both total system and component level demands experience on current engineering technology encompassing CPU, disk, tape, printer and plotter exposure.

With a diverse application and Client base, the inherent variety and challenge is unique. Coupled with product development, you are assured of staying ahead in technological exposure.

In such an environment, personal attributes are weighed as critically as technical competence, giving indication of the high standards maintained by our Client.

THE PROGRAMMING STORY BEHIND THE FRONT PAGE NEWS

The news is all from Morgan-Grampian plc, a major publishing house responsible for 50 important titles, many of them required reading for people concerned with the advances of high technology in business and industry.

With the installation of a large new IBM system 38 configuration at our Head Office in Woolwich by leased line to an IBM 3083 connected at Croydon, we're now ready to take on the exceptionally bright, people-orientated Programmers who will write the synopsis for our future growth—in RPG and COBOL—and do much more besides. There will be opportunities for writing systems using micros, minicomputers and mainframe in a multi site environment.

IBM 38 experience is not a requirement—we can provide all the training you'll need to use our advanced equipment to develop—then expand—a complete range of software systems. Everything to support exciting developments.

What we want from you

is a minimum of 2-3 years' good programming experience and ability to liaise well with people in every area of our business from editorial chairs to finance and media sales.

Later, it could be possible for you to move out into these departments in a key interface role. So you'll need to be the kind of communicator who can bring about a clear understanding of computer systems amongst non-computing people.

If that's the sort of challenge you're equipped to take on, you can expect a starting salary up to £10K, a superb range of benefits and a lively and companionable environment—our staff club amenities include a restaurant and bar. We're also conveniently located close to Woolwich BR station and an excellent shopping centre.

Now for your programming story—everything you've done up to date. Send it to: Personnel Officer, Morgan-Grampian plc,

30 Calderwood Street,
London, SE18 6QH
Tel: 01-855 7777

LANGTON

Langton Electronic Publishing Systems Limited is an established but fast expanding systems house specialising in information management.

As a stable and profitable organisation they cover areas such as text and graphics, demand printing, viewdata, on-line retrieval systems, optical and video discs and computer assisted retrieval and delivery systems.

TECHNICAL SUPPORT ANALYST

UP TO £14,000

As part of their expansion plan they now require a technical support analyst.

You will be involved in the installation and support of electronic publishing software products, including trouble-shooting on customer sites.

The position will require some travelling to Europe and potentially North America.

Ideally your background will include eighteen months plus experience in a development or support environment with exposure to IBM VM.

EXCELLENT BENEFITS PACKAGE

- * Bonus Scheme
- * Interest Free Season Ticket Loan
- * Pension Scheme
- * Flexitime

For an informal discussion regarding this opportunity please telephone Miles Richards on 01-638 1804 (24 hours) or 01-647 2385 (7pm - 6pm).

New installation
System Development
Key Appointment
Rural Essex (London 40 mins)
Car allowance

We are a company who are the leaders in our particular field with regional offices and service centres located throughout Britain. Our rapid expansion has created the need for a comprehensive MIS management programme.

The immediate aim is to install a new IBM System 38 in our headquarters in ESSEX, and then provide a networked link, using the latest IBM software, to our sites throughout the UK.

In order for us to achieve our aim, we require a SENIOR ANALYST PROGRAMMER who has the technical ability and personality to help build a new department.

We think the ideal candidate should have considerable IBM GSD experience and have a desire to work in a networked environment. He or she will be heavily involved in the initial systems and programming design. Subsequent phases of the project will provide the opportunity for travel between user sites. Successful candidates can expect a competitive salary and the benefits associated with a major employer.

SUPPORT PROGRAMMER/ANALYST

Salary Range £8,500 – £11,550 p.a. + Benefits Beds

Our Group, with an unrivalled reputation for excellence across a diverse range of high-tech products has successfully established its Central Support Group for the European Sales operation.

Now, due to promotion, we are able to offer a position of PROGRAMMER/ANALYST to provide a full range of services to our plants throughout Western Europe. Based in our prestigious complex in Bedfordshire, you will travel when required, to assist both users and sales staff on the effective use and development of systems.

The person we seek should have experience of COBOL in a mainframe environment, but also have had exposure to the personal computing sector, as this is a growing facility within the Group.

Your brief will be to provide effective programming and analytical support in identifying opportunities to improve sales effectiveness through computerised aids, training on current systems, improved sales systems, training of sales staff on software available within personal computing. The ability to produce systems and programming specifications, together with the task of ensuring that these will enhance the effectiveness of sales staff, will be the main objective.

Personal attributes required are a business orientated personality with the self-discipline to plan your own activity and the ability to interface at all levels, both in a user and training situation.

This is a career opportunity coupled with an attractive range of benefits, including profit sharing, private health plan and full relocation where necessary.

Candidates wishing to seize this opportunity should contact our Advising Consultant, **Brian Harris** on 021 236 3781 (24 hour answering service) or send a Résumé to the **Birmingham** address shown below at the earliest opportunity.

UK Data Centre Manager

£14,000 plus Car

"A challenging new opportunity for a technically competent operations professional to head-up the U.K. Data Centre controlling one of Europe's most successful Electronics Corporations"

We are responsible for providing the technical facilities and services behind a highly-sophisticated, integrated MIS project. The systems currently being developed in the UK, will form the basis of business management in several significant areas of Northern Europe.

Crucial to the successful management of this long-term project is the appointment of our UK Data Centre Manager. The high visibility of this role demands that you have practical experience of the following:

- ★ **Network Planning and Management.**
- ★ **IBM DOS Communications Products.**
- ★ **Database Products.**
- ★ **Software Productivity Tools.**

You will be providing a vital technical link between systems development and the existing operations team where your advice and guidance will be sought on aspects of existing and future computing to include 4th Generation techniques.

The benefits of the position in addition to a competitive salary include a Company car, free private health insurance plus the usual benefits associated with a large multi-national organisation.

Application should be made by submitting a detailed Curriculum Vitae to **Nick Reid**, Advising Consultant at the London Office address below. All applications will be treated in the strictest of confidence and should be marked: Reference NOA/1.

IBM compatible system engineering c£16K + car is just the start of what ATLAS 10 could mean to you.

The Atlas 10 is a large-scale, IBM-compatible system that makes use of Fujitsu's advanced LSI technology. It's one of the many new products that are strengthening ICL's grip on the large systems market.

ICL's philosophy demands support activities of the highest calibre to complement the excellence of the new systems products.

Our support team already has highly skilled professionals with extensive experience in the IBM mainframe/compatible market. Present sales activity and accelerated future plans demand that we find another, equally experienced man or woman to join this team.

If our new London based team member is to be

you, you'll need a thorough knowledge of VM and MVS, but equally important will be your well developed communications skills that ensure your success in working closely with our customers on all aspects of software development and support. With a background such as that, you could even expect to find yourself helping out on customer presentations at the pre-sale stage.

If your experience is right, why not use it to get involved with ATLAS 10 – and with everything that ICL is doing in the IBM compatible market.

Ring for an application form or send your c.v. to Barbara Fowler on 01-788 7272, Ext 2133: ICL House, Putney, London SW15 1SW.

We should be talking to each other.

ICL

Systems Programming

Salary c.£11500

We are a well established and highly respected Company with a substantial and innovative history of Data Processing activity. As such we are fully aware of the need continually to appraise the benefits available from modern technology.

We are based on the Staffordshire/Derbyshire border, in an area which offers the dual benefits of beautiful countryside and access to the shopping centres and nightlife of several large towns close by. Housing is plentiful and inexpensive and excellent sporting and cultural activities are within easy reach.

Our Data Processing configuration comprises a large IBM compatible mainframe, currently running MVS, CICS and a TSO equivalent, supporting an extensive 3270 telecommunications network. However, we are reviewing carefully our level of MVS and are actively planning the introduction of VTAM.

Staffs/Derbyshire Border

You will need to be already employed in a systems programming environment and will be required to demonstrate previous experience, together with a sound understanding, of either MVS or CICS. As VTAM features in our future plans, a knowledge of this would obviously be advantageous.

The comprehensive remuneration package includes pension, Life assurance cover, 24 days annual leave and full relocation where appropriate.

If you can relate to this challenging opportunity, contact **Jim Mitchell** on 021-236 3781 (24 hour answering service) or at home on 021-427 2291 (evenings and weekends until 9.00 p.m.).

You are assured of a prompt and confidential interview.

TOPS IN MICRO DISTRIBUTION

Rapid Growth Means Rapid Advancement Means Opportunities.

Rapid Recall

Rapid Recall and Rapid Terminals are recognised as the leading U.K. distributors of Microcomputer components, boards, systems and peripherals. With offices based in High Wycombe and Nantwich our sales are exceeding £20 million per annum. Our success is based on offering our customers the best technical sales support in the industry, and we're now looking for a number of exceptional Sales people to join our informal team.

Internal Sales Engineers - Rapid Recall and Rapid Terminals

Internal Sales is a major stepping stone for career advancement into Field Sales or Marketing. Responsibilities include customer visits and telephone interface, preparing quotations and supporting our Field Sales Engineers. Sales experience is not totally necessary and hence makes this an attractive opening for junior design engineers wishing to enter into sales.

Field Sales Engineers - Rapid Recall

Our dramatic growth has meant that new sales areas have been created into the North and South of England. Responsibilities include the sale of DEC, Intel and H.P. products and knowledge of any of these product or sales experience is desirable.

Digital Sales Specialist - Rapid Recall

A totally new position for a person currently selling to software houses and small OEMs. A knowledge of Digital's microcomputer range would be preferable although not essential.

Commercial Systems Sales Engineers - Rapid Recall

Our recent appointment as the exclusive U.K. distributor for Intel Commercial Systems has created a sales position for taking these products both into the OEM and end user market. The ideal applicant will have an appreciation of commercial systems and the IBM product.

Field Sales Engineers - Rapid Terminals

We need to fill a new position based at High Wycombe with responsibility for a fast-expanding product area that includes Digital Terminals, Environ Colour Graphics, Summagraphics. Relevant experience is necessary.

Product Manager - Rapid Recall

A new marketing position has arisen with responsibilities including product promotion planning, interface with the principals and our sales force, stock profiling and identification of new market opportunities. An electronic or sales background plus experience with micro-based products is required.

Rapid Recall
Rapid House, Denmark Street,
High Wycombe, Bucks. HP11 2ER.

If you feel that you might enjoy
working in our team, why not ring

COMPUTER OPERATIONS ANALYST

Walton-on-Thames

Here is the ideal opportunity for an Operations Analyst who is looking for career development in a specialised DP environment with a major company. You'll join the Operations Support Group at our DP Centre where you will be responsible for interfacing between Development and Operations departments, designing and producing production JCL, conducting acceptance tests for new and modified systems and providing first-line support for production systems.

Extensive training will be provided in PL/1, Easytrieve and basic systems analysis.

We are looking for a man or woman, with a background of two years in operations support, either on or off shift, and experience of IBM mainframes running MVS. As well as having the relevant technical skills, you must be able to communicate effectively and enjoy the challenge of servicing user requirements.

Salary is negotiable according to age and experience and is backed by a range of large-company benefits.

Please telephone for an application form to:

Mrs V. C. Fairhurst, Senior Personnel Manager,
Brooke Bond Oxo Limited, Leon House, High Street,
Croydon, Surrey CR9 1JQ. Tel: 01-686 8899 ext. 516.

JNR CONSULTANT HP 3000

to £12,000

Due to expansion a company based in the West End seeks a Junior Consultant. Applicants should currently be in an Analyst or Analyst/Prog role with the desire to become more involved in Analysis. Experience of HP equipment would be useful but not essential. As there will be a good deal of client contact applicants must be professional in both appearance and attitude.

PROGRAMMERS PASCAL/COBOL

to £9,000

Opportunity to join a progressive company in the West End who have just committed a large sum of money to continued development of their computer systems. Applicants should have a minimum of one year's PASCAL or COBOL and will have the opportunity to learn and work in both languages. Good prospects and conditions in this friendly but professional team.

ANALYST/PROG HONEYWELL

£11,000

A large South West London based manufacturing company are seeking an Analyst/Prog with good COBOL exp. A number of micros have also been installed so exp. with BASIC would be useful. You will be working in a small dept. which runs a multi-application on-line system that will be gradually increased to include a purchase order system. An opportunity for someone to become involved.

PROGRAMMERS HONEYWELL

c.£9,000

A C. London site and a W. London based site require COBOL Programmers with a minimum of one year's exp. Both are commercial sites and will offer quick progression for a bright person, possible move to analysis. The successful candidate will work on various applications with a good deal of development. Good benefits.

ANALYST/PROGRAMMER DATABASE

£11,000

A rapidly expanding software house is currently recruiting Analyst/Programmers with a minimum of 18 months' DATABASE gained in a PRIME or CMC environment. The software house actively encourages employees to service clients in a consultancy role therefore applicants should be presentable and have the ability to deal with first-time users. The client can offer job satisfaction, regular salary reviews and intensive training.

PROGRAMMERS PL1

to £11,500

A company offering a range of financial services has several requirements for PL1 programmers. The minimum requirements are for 18 months' PL1 in a commercial environment for the programming positions and up to four years' plus for the senior posts. Applicants should have good all round programming skills to include design, coding and implementation. Due to the size of the client there is a recognised career path which would lead through to systems if desired.

ANALYST/PROGRAMMERS RPGII/RPGIII

£NEG

We have many clients, all of whom are SYS34 or SYS38 users, who have current positions for programmers and analysts. Applicants should have a minimum of six months' RPG from a commercial background through to three years' + for the more senior positions (any MAAPICS would be of special interest). The companies range from Banking through to Manufacturing and offer a wide range of benefits.

ALL LEVELS HP 3000

to £15,000

We have numerous Clients in London and the Home Counties who urgently require experienced HP personnel ranging from Progs. Analyst/Progs. through to Project Leaders. The minimum requirement is nine months' HP COBOL or BASIC for the junior positions, with proven analysis and supervisory skills for the senior levels. The companies range from small software houses to large in-house installations and offer a wide variety of prospects and perks.

ANALYSTS LONDON

to £13,500

We have been retained by three London-based companies to recruit Analysts with varying levels of experience. A sound D.P. background is required with preference given to candidates with general accounting application exposure. All positions involve extensive work on new projects and offer good career prospects. Perks are varied and include large company benefits and discounts and relocation expenses where necessary.

DATA GENERAL

Senior Technical Support Programmer

£10-14,000

Thomas Cook Financial Services Ltd., a wholly owned subsidiary of Midland Bank plc, needs an experienced DG technical support programmer to join a small team involved with the development and support of a network of worldwide computer systems.

The job involves some programming in Business Basic, control of applications software, maintenance of software and site documentation libraries and participation in research and development activities. Future R & D work includes the evaluation of the DG desktop range of computers and the Xodac and Infos software products for which relevant expertise would be of particular interest.

Applicants for this post must have extensive Data General experience at a technical level and in particular a thorough knowledge of Business Basic under RDO, AOS and AOS/VS on Nova, Eclipse and MV series hardware.

You must be prepared to travel to support overseas sites as necessary and work some unsocial hours. In return, we offer a salary in the range of £10,000-£14,000 per annum, depending upon skills and experience, concessionary travel, low interest loans and relocation assistance if appropriate, to Peterborough.

Written applications giving full career details should be sent to Miss V Wood, Personnel Manager,
Thomas Cook Financial Services Ltd.,
PO Box 36, Thorpe Wood,
Peterborough PE3 6SB.

COMBINED ACTUARIAL PERFORMANCE SERVICES — LEEDS —

SYSTEMS MANAGER £13,000 to £15,000
ANALYST/PROGRAMMER £9,500 to £12,000

Combined Actuarial Performance Services produces investment performance measurement and statistical information for pension funds, and is backed by the three largest U.K. firms of Consulting Actuaries. Its administrative operation is based in Leeds and includes a new IBM 4300 computer installation, running under VM/CMS.

There are currently two vacancies:

- (a) Systems Manager — responsible for the design and development of new systems, improvements to the existing systems and ultimately for all computing aspects of the organisation. The applicants should be of numerate graduate level and should have a minimum of three years' relevant experience.
- (b) Analyst/Programmer — responsible to the Systems Manager for implementation of new systems and programs. A minimum of two years' relevant experience is required, and some Fortran experience would be valuable.

Please write with full details to:

David P. Hager, Esq.
Combined Actuarial Performance Services,
11 Albion Street,
Leeds, LS1 2ES.

COMPUTER PROGRAMMER

Thorntons, the well known quality confectionery manufacturers are looking for an experienced programmer.

Candidates (male or female) should have considerable programming experience using COBOL, and familiarity with Hewlett Packard 3000 hardware would be an advantage.

We offer an attractive salary, excellent working conditions and a full range of facilities.

Please telephone or write for an application form to Executive Manager/Personnel, J. W. Thornton Limited, Derwent Street, Belper, Derby DE8 1WP.
Tel: Belper (077 382) 4181.

JOBS FOR CONTRACT STAFF

As the economy picks up, so do the job prospects for contract staff at home and abroad . . . John Charlton reports

Horizons widen for skilled contractors

HAPPY days are definitely here again for contract staff, with many agencies reporting bumper bookings, though this applies in the main to those with a number of years' experience, particularly in online programming. But for batch programmers the market is diminishing as most firms are now able to meet their needs for these staff internally.

The upward trend in the UK economy has contributed most to this year's growth in the number of contract jobs now available. Demand is higher in the South-east, but there is also plenty of work to be found North of the Watford Gap.

Skilled staff can also broaden their horizons with a stint abroad and agencies report attractive vacancies in Western Europe and the US, on both the East and West Coasts.

Any agency worth its salt will match the applicant's experience to the potential employer's requirements, and will test would-be contractors' skills. For overseas jobs, agencies will also look after contractors' visa and work permit requirements.

Stuart Pope, a marketing executive with Guildford-based computer staff recruitment specialist Strand Computer Recruitment, confirms that life for contractors is getting rosier. "As the country cheers up everything cheers up, and 1984 is looking good for contractors. Employers are after programmers and analyst-programmers with solid online skills. But there is not much demand for the average Cobol batch programmer."

"We have a number of contracts for those with IBM System 34 experience in RPG III, and particularly in file handling for this mini."

"As the machine has only been out a relatively short time there are not many people around with System 38 skills, and those who

For those prepared to fly off to Australia, good contracts await qualified staff.

have worked with System 34 are having difficulty moving up to the 38.

"As far as large IBM mainframes are concerned there is a strong need for MVS systems programmers, as well as online and database staff with good CICS and

DL/I experience."

Strand Computer Recruitment has more than 80 contract vacancies on its books, but Pope comments: "It's a very fast market and the number of vacancies we have at any given time can vary dramatically."

Strand also has some ICL contracts to fill. As with IBM, the call is for online programmers in IDMS and TPMS (teleprocessing management system). Work is available, too, for System 25 Assembler programmers for the MB29 minicomputer.

Contracts for programmers vary from £300 to £350 a week for those with the more common skills to £450 for good solid skills and experience.

For people who fancy a move to the Antipodes Strand has good contracts in Australia and New Zealand.

The lure of working abroad is one of the attractions of contracting, and languages — of the human variety — need not be a problem. Apart from the English-speaking countries, English is spoken widely in the Netherlands and Belgium.

Dave Hayton handles contract staff at the Knight agency in Manchester. This bureau covers the whole of the UK as well as specialising in contracts in Western Europe and the US.

Knight currently has contract vacancies in Holland, Belgium, Germany and the US. In Holland and Belgium there are jobs for those who have worked on DEC, IBM and ICL equipment. These are for online or database skills.

In the US Knight has contracts paying upwards of \$800 a week.

Hayton says: "In the US we have a particular need for staff with Unix and 'C' (the Unix applications language) experience. On the West Coast we have a number of contracts for those with IMS and database skills."

Anyone wanting to work in the US must have a visa and the so-called green card (a work permit).

Hayton says there are plenty of contracts throughout the UK, too. Again these tend to be for programmers and analyst-programmers with online and specialist skills.

Knight has a number of contracts demanding DEC Vax and PDP systems programming skills, as well as database and teleprocessing experience (IDMS and TPMS) on JCL equipment. Hayton says: "Coral programmers are in demand, and not only for defence work. There are jobs to offer for Coral programmers who have used the language on DEC Vax and PDP minis, as well as Ferranti and GEC machines."

According to Hayton the current rate for Knight contracts varies from £375 to £700 or £800 for the top jobs. He says demand for contract staff is "quite strong in the North-west and Scotland, and the South will always have a high demand".

It is not only actual computer experience that matters in getting good contract pay, but also the type of business in which the contractor has learnt his skills. For those who have been with the banks pay is that much higher.

Nick Poland, consulting manager with Croydon computer staff agency TLP, says: "You have to be a specialist to do well in contracting and we find that good computer experience allied to a banking background can bring in most money. We have jobs with banks paying up to £800 a week, and for these one would need at least four years' experience of on-line and database programming."

"But for any programmers with online skills 1984 will be a good year."

John Charlton is deputy editor of Computer Talk.

Britain's leading Software House needs more leading professionals

Our success as a software house is reflected in the range and quality of positions we offer for contract or permanent staff. CALL JOAN LOVEJOY ON 0442 40761

Project Leader

Negotiable Salary

This position has arisen due to the increasing demands on the time of the Project Development Manager and the person selected will deputise for him in his absence. Candidates should have about 7 years' strong IBM experience and have been responsible for at least one major project. A good commercial background is essential and knowledge of library systems would be an advantage. Exposure to IDMS and Shadow II would be an asset.

IBM and DEC Installation

The organisation utilises large IBM hardware and multiple DEC computers and several on-line database systems are operational. In addition, a network with distributed databases at its offices in North and South America and Europe is being set up. COBOL is the main programming language.

Working Environment

The development team comprises a number of experienced analyst-programmers who work individually on projects or combine into small project teams as the need arises. A high proportion of the staff is British and English is the working language of the installation.

HOLLAND

Analyst/Programmer Library Systems

£11-£17,000

This opening offers the opportunity to become involved in important development work with strong emphasis on analysis. The ideal candidate should have between 3 and 5 years' analysis and programming experience, preferably in a DEC environment, although IBM would be acceptable. A good knowledge of COBOL is required together with a strong technical background. Experience of library systems is essential.

Living in Holland

Many British computer staff work in Holland and it is in many ways the "softest landing" for those who wish to move to continental Europe. The client is located in a small town near the coast and accommodation in the area is not difficult to find.

Relocation

A generous relocation package is offered to help candidates and their families settle in satisfactorily.

English, as well as being the working language of the installation, is generally spoken throughout Holland, which considerably eases settling-in problems.

Specialists since 1971 in UK and International computer & technical appointments

OCC Computer Personnel

Cheshire
(0270) 627 206

Interviews

Initial interviews with the client's representatives will be held in the UK during April.

For an initial discussion, ring me, Alison Jary, on (0270) 627206 office hours or (0270) 625438 other times, or write to me at the address opposite.

T.I. 990 PROGRAMMER/ANALYST

Salary range £8,500 – £11,500 plus benefits **Beds**

We are a multi-national Corporation and wish to enlarge our Central Support Group which is currently involved in developing, implementing and supporting a range of systems for our European sales operation.

An opportunity has now been created within the Support Group, due to internal promotion, for an experienced Programmer/Analyst with TI 990/COBOL. Having seen the implementation of major new systems in a number of European sites, we require your skills to maintain the momentum of development, later moving into on-site implementation of these systems, travelling to such locations as Helsinki or Madrid.

Our ideal person will have sound experience of TI 990 COBOL and will be able and willing to travel, sometimes at short notice, to various locations throughout Europe for perhaps one or two weeks at a time.

Our network of TI 990's interfaces with a large IBM mainframe resource and, you will also become involved in this and other levels of computing. You will also have the opportunity of becoming involved in up-to-date technology including such interesting aspects as electronic mail. The Central Support Group forms part of a large Management Services Organisation which provides a comprehensive range of d.p. services to internal departments throughout Europe.

We see this as a superb opportunity for an energetic and ambitious Programmer/Analyst who wishes to build a career with one of the world's major blue chip Organisations. We have the opportunities available – if you have the talents to match. We are quick to identify potential and promote on merit – not on length of service.

We also offer an attractive range of benefits which include profit sharing, private health plan and full relocation expenses. We have attractive modern premises situated close to the centre of an historic market town which is surrounded by pleasant Bedfordshire countryside, yet only 45 minutes from the heart of London.

Give your career a chance to really take off – contact our Advising Consultant **Brian Harris** on **021 236 3781** (24 hour answering service) or send him your current Résumé to the **Birmingham** address shown below, at the earliest possible opportunity.

"A unique opportunity for your career to take off with one of the world's major blue chip Organisations"

MAXIMISE YOUR POTENTIAL

Our Client, a major driving force in the semi-conductor industry, has spearheaded many of the technical innovations over the past decade. The European Division of this major blue-chip Organisation, is making full use of systems innovation to enhance and benefit the efficiency of their operations. With plants throughout Western Europe, the systems are developed and supported by a Central Support Group based in the UK. Due to major developments in hand and the need to further enhance this facility, they are able to offer two unique career opportunities for the following:

Programmer/Analyst £8,500 – £11,500 + Benefits

You will be developing and supporting systems throughout the European Division and will need to travel as required spending short periods off site if necessary.

Your skills will have come from IBM experience probably 370 based, including COBOL/DLI. With an integrated systems policy the use of communications and interface facilities incorporating TSO/SPF is standard.

The role will demand self discipline in organising your own schedules and a business approach in analysing requirements and dealing with end users at all levels and in a variety of situations. Without doubt a challenging role, in an Organisation where ability, not length of service, is the criteria for career progression.

The current environment utilises IBM mainframe facilities, with a range of minis and micros throughout the installation. Providing services to a group utilising over 22,000 terminals, 8,000 stand alone processors and 470+ disk drives creates a dynamic environment offering tremendous challenge and interest. These career openings within this highly regarded Organisation represent the opportunity to see yourself develop to the leading edge of the industry. Additional benefits include profit sharing, private health plan and full relocation where necessary.

Candidates should contact **Brian Harris** on **021 236 3781** (24 hour answering service) or send a current Résumé to the **Birmingham** address shown below at the earliest opportunity.

Programmer £7,000 – £9,000 + Benefits

Based in our Bedfordshire location, you will be working in an excellent environment that fully utilises the latest systems techniques. Supporting our development teams, you will be providing programming support to a wide variety of systems across a diverse applications spectrum.

The ability to work as part of a team and also independently calls for a versatile character and mature personality. These characteristics coupled with good IBM COBOL experience are the attributes which they seek in the successful Candidate and further career prospects would depend only on your ability.

SOFTWARE PROFESSIONALS

The Netherlands

DF1.50-DF1.100K

Logica BV, part of Logica Holdings, is the leading Systems House specialising in High Technology in Holland today.

Based in Rotterdam, Logica have achieved considerable growth and success in developing and implementing Systems in the following sectors: communications, energy, defence, industrial and finance/banking.

Logica BV is still a relatively small operating company, offering significant career growth combining the following factors: a) a wide variety of technical projects, b) European travel opportunities, c) project and manpower responsibilities and d) active involvement in client liaison/sales support.

The company is currently seeking to recruit candidates to work on advance Communications and Defence Systems.

Experience in one or more of the following areas is most appropriate.

- ★ Air Traffic Control
- ★ IBM Series 1
- ★ IBM Internals/Protocols
- ★ Teletex
- ★ Package Switching
- ★ X25
- ★ Signal Processing
- ★ Radar/Sonar Processing

For further written information please telephone or write (preferably including a C.V.) to April Advertising. Initial interviews will take place in London during April with final interviews in Rotterdam to follow.

IBM Systems Programmers

London

As a Systems Programmer we believe the first thing you will want is more technical information. The system base we use is an IBM 3081G and a 3033. On the software side we have MVS/SP, JES2, TSO, VSPC, CICS, IMS DB/DC plus a host of other products. We have a network of over 600 terminals in approximately 70 locations managed by ACF/VTAM.

Our future plans include upgrading the 3081 to a Model K, implementing MVS/XA, CICS 1.6 and NCCF. Other projects will include implementing a disk space management product, implementing a total performance monitoring and capacity planning system, a major security investigation and contributing to our future hardware and software developments.

To resource the above development projects we wish to recruit the following:

Team Leader

You will be leading a small, but highly technical team. For this you will need a good knowledge of MVS. You must be able to demonstrate supervisory experience and planning skills as an emphasis will be on leading your team.

Systems Programmer

You will need solid MVS experience for this position. In making this move you will be looking to greatly increase the software, planning and supervisory skills you have gained to date.

Systems Programmer

For this position you will need around two years' Assembler experience. The specific software skills are not important. We are more interested in your ability and attitude.

Across all of these positions you can enhance your existing IBM systems software experience in a variety of directions. These include communications, personal computing, performance monitoring and capacity planning.

In parallel to our investment in computing technology we have an equal commitment to investing in our people through ongoing training. This will ensure that you are constantly improving your technical and personal skills.

Overall, the systems programming team plays a crucial and highly visible role within our Organisation. To apply for one of the above positions please contact our Advising Consultant, **Stephen Brown**, on 01-835 0671 or 04024 72610 evenings and weekends. Alternatively you can submit a detailed C.V., to him at the London office address below.

Morino Associates, was established over ten years ago as a specialist IBM system software company, near Washington D.C. As a reflection of their success and the innovation and quality of their product range, for the second consecutive year they are among 'the Inc. 500: America's Fastest-Growing Companies.'

In 1982 they set up a UK base in St. Albans, from which to tackle the W. Europe/Middle East markets. Phase II of this progressive, sustained expansion now demands the appointment of an Associate and a Senior Associate to their Product Support Groups in the UK, W. Germany and U.S.A.

Such is the importance of these appointments that the Technical experience required is considerable:

- * Excellent MVS externals.
- * TSO/ISPF/CLIST.
- * SAS, PL/I (or similar) plus ASSEMBLER.
- * Early Warning INFO/MVS.
- * MVS measurement sources.

Of considerable additional benefit will be debugging, tuning/capacity planning and other widely used system software tools experience (eg CICS/IMS, ... etc.)

The role encompasses the provision of first level support (installation, operational and data sources problem resolution), customer training and technical presentations, new product developments - truly diverse, challenging and interesting positions, which include Overseas customer responsibility.

For a prompt assessment of your suitability, in the strictest confidence, contact **NICK REID** on 01-835 0671 (9.00-5.30) or on 01-644 1973, evenings or weekends. Alternatively send a detailed Curriculum Vitae to him at the London office.

Interviews will be held at our Regional Offices, where appropriate.

ADP Insite

ANALYST/PROGRAMMER

c.£8,750

We are a fast growing and successful supplier of turnkey systems to the hotel and catering industry.

We are looking for an analyst/programmer who will have a minimum of two years' experience working in a commercial situation and a thorough knowledge of Dec Basic+ or M Basic. Experience of Z80 assemble an advantage.

You will be responsible for our Food and Beverage Control Systems.

This position will appeal to someone with an appetite for work and who is self-motivated, and appreciates a close team spirit.

Benefits will include private medical insurance and Company pension scheme.

Applications in writing, enclosing current c.v. to: **Stewart Boddy, Software Manager, ADP Hotel Services Limited, 2nd Floor, Heathrow House, Bath Road, Cranford, Hounslow, Middlesex TW5 9QP.**

GRADUATE PROGRAMMER

Our company, an established and expanding software house, is able to offer its employees a whole variety of work. All our projects are based on clients' sites, most clients being household names and located in the London area. Currently, our workload includes involvement with ICL, IBM, Honeywell, Burroughs, NCR, Data General, DEC and VAX equipment and languages include COBOL Various Assemblers, Basic, RPG, PLI, CORAL and FORTRAN. You'll need at least 18 months' experience to command a salary in the £9,000-£15,000 range and your chances of an offer would be enhanced if you have experience of:

ICL VME/B COBOL or
IBM CICS and COBOL or
Any CORAL

We'll make a decision by the end of ONE INTERVIEW ONLY, so send a c.v. (typed or handwritten) to:

MMT COMPUTING plc
New Gallery House
6 Vigo Street, London, W1

Xitan is the foremost UK distributor of professional Microcomputer Software to the trade. Due to continuing rapid expansion we now have a vacancy within our support department.

TECHNICAL SUPPORT

You will be responsible for providing technical support and trouble shooting backup to the wide range of software that we distribute for CP/M, CP/M-86, PC-DOS, MS-DOS and other related operating systems.

This position provides an excellent opportunity for expanding your knowledge in the area of the latest developments in the fast-moving software industry. Applicants will preferably be graduates in computer science or related subjects; however, relevant experience and the ability to work logically on a customer orientated outlook is equally important.

As part of the Comart Group of Companies the above vacancy has a range of benefits including pensions scheme, company share scheme, sickness benefit and 20 days' holiday p.a.

PUBLIC SECTOR APPOINTMENTS

STAFFORDSHIRE COUNTY COUNCIL

Principal Systems Programmer up to £11,052
Senior Systems Programmer up to £10,539
Senior Programmers up to £10,539
Senior Systems Analysts up to £10,539

The County Council computer installation is based on two IBM 4341 mainframes with 3370 disks (over 6000MB) and 3420 tapes running under VM/370 and DOS/VSE serving all departments of the Authority and four District Councils. There are over 160 local and remote terminals installed and more will be installed during 1984/85. The main programming language is PL1 with DL1 and CICS; APL (with ADI and ADRS) and EASYTRIEVE are also in use.

Applicants for the Systems Programmer posts should ideally have several years' experience in one or more of the software products mentioned. Senior Programmers will require knowledge of PL1 preferably with DL1 and CICS and knowledge of Assembler will also be an advantage. For the Systems Analysts posts a record of successful system design and implementation preferably of terminal based systems will be the prime qualification, although an experienced applications programmer wishing to move to systems analysis would be considered.

Training as appropriate will be given to successful applicants for the above posts and salary within the scales being offered is negotiable according to experience. In appropriate cases the County Council will consider the granting of financial assistance towards removal and lodging expenses.

There are no application forms and written applications, which should include full details of the applicant's computing and employment experience, should be sent to the County Treasurer, P.O. Box 10, County Buildings, Eastgate Street, Stafford ST16 2NF by March 30, 1984. Telephone enquiries may be made to Stafford (0785) 3121 - Mr. J. T. Tucker, extension 6305 or Mr. M. A. Holt, extension 0480. All applicants are asked to note that it is the County Council's view that it is desirable for their employees to be members of an appropriate trade union.

EAST ANGLIAN REGIONAL HEALTH AUTHORITY Experienced Systems Designers/Programmers

required to join a development section of over 30 staff providing computer systems in patient administration, child health, finance etc., for health authorities in East Anglia. Equipment includes district based CTL and Datapoint computers for patient administration and finance respectively, as well as a large central ICL 2986.

Applicants should preferably be educated to degree level and experience in COBOL would be an advantage.

Salary scale: £7,404-£9,025 per annum.

Applicants with less than two years' experience will be considered but at a lower starting salary.

Application form and job description from the Regional Personnel Officer, Union Lane, Cambridge CB4 1RF. Tel: (0223) 61212 ext. 325. Closing date: April 6, 1984.

(8544)

THE UNITED MEDICAL AND DENTAL SCHOOLS OF GUY'S AND ST THOMAS'S HOSPITALS PROGRAMMER/STATISTICIAN

required to work in the Unit for Metabolic Medicine and Community Medicine Department at Guy's Hospital, in the planning, implementation and analysis of a project concerned with the prevention and treatment of diabetic kidney disease in large populations. General statistical help would also be required in the work of the Unit.

Epidemiological/statistical trial interests or experience would be valuable. Salary in range £3,310-£3,425 plus London Allowance. Initial appointment would be for one year.

Applications should be made, by writing, including curriculum vitae and references, to the Director of the Unit for Metabolic Medicine and Community Medicine, Guy's Hospital Medical School, London Bridge, London SE1 8RT, quoting Ref. MK1.

(8484)

Principal Analyst Programmer Career Development Opportunity by the Sea to £11,364

Brighton - a town with a modern progressive authority and a considerable record of achievement. Brighton - the biggest urban community in Sussex, a good place to develop your career. Lying between the South Downs and the sea, just an hour from London, it is one of the most attractive locations in the country, the home of the famous Brighton Pavilion, and a principal European conference and entertainment centre.

This key appointment offers you an absorbing career full of professional challenge in an environment which features:

- a wide range of applications few companies can match in a developing installation
- concentration on systems development

The installation is running an IBM 4331-2 (4 MB) machine with VM/370 VSE and CMS. Other software in use includes CICS (supporting a significant terminal network) and DL1. The main programming language used is COBOL, although some use is made of APL, ADI and ADRS along with products like CA-EARL.

If you have two years working experience with COBOL, we would like to hear from you. IBM experience advantageous but other relevant backgrounds carefully considered. Ideally you will have had at least 5 years in DP, including sound analysis experience. Supervisory skills helpful.

Generous relocation assistance includes grants of up to £3,750 plus reimbursement of removal costs, lodging and travel allowances.

To discuss this opportunity please telephone Brighton (0273) 29801 and talk to Ivor Blanchford on extension 464 or Jim Sweeney or Mike Taylor on extension 395.

An application form and information package can be obtained by telephoning Brighton (0273) 29801 extension 466.

Closing date 6 April. Borough of -

(8480)

THE LONDON HOSPITAL MEDICAL COLLEGE (University of London)

PROGRAMMER

Applications are invited for the post of programmer in the Computer Centre of the London Hospital Medical College. The person appointed will work on ULCC CRAY-1 and Amdahl machines, Queen Mary College 2988, and local mini and microcomputers. Programming ability in Fortran, Pascal or C and interest in biomedical research applications is essential. Some knowledge of statistics (especially packages such as SPSS) is desirable. The programmer will develop software for medical applications and be involved in the Centre's research work in 3D computer graphics, computer-aided learning and expert systems.

Salary within University Grade 18 £6,310 to £9,375 plus £1,188 London Allowance (under review). Four weeks' annual leave plus extra days when the College is closed.

Applications in writing to the College Secretary, The London Hospital Medical College, Turner Street, London E1 2AD as soon as possible.

Telephone enquiries to Mr Cookson, Head of Computer Centre, 01-377 2568.

(8481)

University of Reading Department of Geography POSTGRADUATE RESEARCH OFFICER

Software for Image Processing

Applications are invited for the above post, to start as soon as possible, for a fixed period until March 1987 with a maximum starting salary up to approximately £3,000 p.a. plus URS. The post holder will be responsible for the development of image processing and classification algorithms for aerial photography. The primary requirement is a PhD which has involved significant software development. Research in image processing, pattern recognition, earth sciences or digital cartography would be advantageous. Other candidates are encouraged to apply.

Application form and details available from the Personnel Office, University of Reading, Whiteknights, Reading RG6 2AA, or ring 0734-70023 ext. 233. Please enclose CV and references. Closing date for applications 13 April, 1984.

(8478)

UNIVERSITY OF GLASGOW COMPUTING SERVICE

SYSTEMS PROGRAMMER

Applications are invited for the post of Systems Programmer in the Mainframe Section of the University's Computing Service. The post holder will be responsible for the development of image processing and classification algorithms for aerial photography. The primary requirement is a PhD which has involved significant software development. Research in image processing, pattern recognition, earth sciences or digital cartography would be advantageous. Other candidates are encouraged to apply.

Application form and details available from the Personnel Office, University of Glasgow, University Avenue, Glasgow G7 8QU, or ring 0437-20000 ext. 233. Please enclose CV and references. Closing date for applications 13 April, 1984.

(8479)

DURHAM CONSTABULARY

Applications (male or female) are invited for the following civilian post based at Force Headquarters, Durham:

COMPUTER OFFICER (Salary £10,242 to £11,364 per annum)

This is a post responsible (along with the Computer Manager) for the analysis, development, implementation and operation of multi-user computer systems using Perkin Elmer 3200 range mini computers, with Reliance data managers.

Applicants should be educated to degree standard, and have sufficient relevant experience to undertake this highly responsible and demanding post. The Authority has a scheme for the payment of removal expenses in appropriate cases.

After-user allowances are payable. All appointments are subject to a satisfactory medical report and to the provisions of the Local Government Superannuation Acts.

Conveyancing, either directly or indirectly, will disqualify. Application form and further details obtainable from The Chief Constable (Civilian Establishment), Police Headquarters, Aycliffe Road, Durham DH1 6TY. Closing date April 6, 1984.

(8477)

THE LABOUR PARTY

A COMPUTER OPERATOR

The Party is currently seeking a computer operator to be based at its headquarters in the City of London. The post holder will be responsible for the operation of the Party's computer system, which is used for the production of Party literature and for the management of Party finances.

Salary range £2,470-£2,970 p.a., depending on experience in a similar capacity. The Labour Party is an Equal Opportunity Employer. Applications are obtainable from the Administrative and Personnel Officer, The Labour Party, 180 Wyndham Road, London, SE17 1UT (tel. 01-703 0823) and should be returned by not later than Friday, 30 March, 1984.

Why salesmen must be in at the installation

LAST week I described some of my experiences involving negotiation for and installation of a small business computer based on microcomputer equipment. The reason for doing so was not to give a public display of my inadequacies as a business manager, but rather to give to those salespeople involved in the sale of such systems some appreciation of what actually happens immediately after they sign up the deal and go rushing off to make the next one.

It is also my intention to dispel any illusions that installing a packaged system is entirely without problems, for there are many factors involved other than whether or not the hardware works properly and the software is bugged.
